- 2.1 Location of surveyed junctions and area of influence
- 2.2 Layout of junction of Hung To Road / Hoi Yuen Road / Wai Yip Street
- 2.3 Layout of roundabout of Wai Yip Street / Hoi Yuen Road
- 2.4 Layout of junction of Hung To Road / Tsun Yip Street
- 2.5 Layout of junction of Wai Yip Street / Tsun Yip Street
- 2.6 Layout of junction of Wai Yip Street / How Ming Street
- 2.7 Layout of junction of Kei Yip Street / Kei Yip Lane
- 2.8 Layout of junction of Wai Yip Street / Kei Yip Street
- 2.9 Adjusted 2024 peak hour traffic flows
- 2.10 The public transport services provided in the vicinity of the Subject Site
- 3.1 G/F layout
- 3.2 B1/F layout
- 4.1 Year 2032 peak hour traffic flows without the Proposed Redevelopment
- 4.2 Year 2032 peak hour traffic flows with the Proposed Redevelopment
- 4.3 The ingress / egress route for traffic generated by the Proposed Redevelopment

1.0 INTRODUCTION

Background

- 1.1 The Subject Site comprises of 2 existing buildings, i.e. the Siu Fu Factory Building at 201 Wai Yip Street, and the Tungtex Building at 203 Wai Yip Street (the "2 Existing Buildings"). Figure 1.1 shows the location of the Subject Site.
- 1.2 On 17th January 2020, the Town Planning Board ("TPB") approved the S16 Planning Application for Industrial Building at 203 Wai Yip Street (TPB ref: A/K14/778). On 4th March 2022, the Town Planning Board ("TPB") approved the S16 Planning Application for Commercial Building at 201 Wai Yip Street (TPB ref: A/K14/808).
- 1.3 The Applicant now intends to redevelop the 2 Existing Buildings into a hotel, with 20% increase in plot ratio, i.e., from the maximum permitted plot ratio of 12.0 to plot ratio of 14.4 (the "Proposed Redevelopment"). CKM Asia Limited, a traffic and transportation planning consultancy firm, was commissioned by the Applicant to prepare a Traffic Impact Assessment ("TIA") in support of the Proposed Redevelopment.

Scope of the Assessment

- 1.4 The main objectives of this TIA are as follows:
 - To assess the existing traffic issues in the vicinity of the Subject Site;
 - To quantify the amount of traffic generated by the Proposed Redevelopment; and
 - To examine the traffic impact on the local road network in the vicinity of the Subject Site.

Contents of the Report

- 1.5 After this introduction, the remaining chapters contain the following:

Chapter Two	- describes the existing situation;
Chapter Three	- outlines the development proposal;
Chapter Four	- presents the traffic impact analysis; and
Chapter Five	- summarises the overall conclusion.

2.0 THE EXISTING SITUATION

The Subject Site

2.1 The Subject Site fronts onto Wai Yip Street to the south, the Wai Yip Street CLP Substation to the west and a rear lane to the north. The section of Wai Yip Street fronting the Subject Site is a dual carriageway 3-lane road. The run-in/out of the Tungtex Building is provided at Wai Yip Street.

Traffic Survey

2.2 To quantify the traffic flows at the junctions chosen for the conduct of capacity analysis, manual classified counts were undertaken on Friday, 15th March 2024 during the AM and PM peak periods. The location of the junctions and area of influence is presented in Figure 2.1 and their layout is shown in Figures 2.2 to 2.8.

2.3 The surveyed junctions include the following:

- J1: Hung To Road / Hoi Yuen Road / Wai Yip Street;
- J2: Wai Yip Street / Hoi Yuen Road;
- J3: Hung To Road / Tsun Yip Street;
- J4: Wai Yip Street / Tsun Yip Street;
- J5: Wai Yip Street / How Ming Street;
- J6: Kei Yip Street / Kei Yip Lane; and
- J7: Wai Yip Street / Kei Yip Street.

2.4 In view that the junction of Tsun Yip Street / Hoi Bun Road is not a signal controlled or priority junction, the junction performance assessment is not conducted. The counts were classified by vehicle type to enable traffic flows in passenger car units ("pcu") to be calculated. From the survey, the AM and PM peak hours were found to be between 0845 – 0945 and 1730 – 1830 hours respectively.

Review of the Traffic Flows obtained from the Traffic Survey

2.5 The traffic flows obtained from the survey in March 2024 are adjusted based on the Annual Average Daily Traffic ("AADT") of station 3020 Wai Yip Street (from Lai Yip Street to Hoi Yuen Road) found in the Annual Traffic Census ("ATC"). The adjusted 2024 peak hour traffic flows are presented in Figure 2.9.

Operational Performance of the Key Junctions

2.6 The existing operational performance of the key junctions is calculated based on the observed traffic counts and the analysis is undertaken using the methods outlined in Volume 2 of Transport Planning and Design Manual ("TPDM"). The results of the existing operational performance of the junctions are summarised in Table 2.1 and the detailed calculations are found in Appendix 1.

TABLE 2.1 EXISTING JUNCTION OPERATIONAL PERFORMANCE

Ref.	Junction	Type of Junction	Parameter ⁽¹⁾	AM Peak Hour	PM Peak Hour
J1	Hung To Road / Hoi Yuen Road / Wai Yip Street	Signal	RC	87%	90%
J2	Wai Yip Street / Hoi Yuen Road	Roundabout	RFC	0.683	0.607
J3	Hung To Road / Tsun Yip Street ⁽²⁾	Signal	RC	52%	89%

Ref.	Junction	Type of Junction	Parameter ⁽¹⁾	AM Peak Hour	PM Peak Hour
J4	Wai Yip Street / Tsun Yip Street ⁽²⁾	Signal	RC	78%	97%
J5	Wai Yip Street / How Ming Street ⁽²⁾	Signal	RC	79%	87%
J6	Kei Yip Street / Kei Yip Lane	Priority	RFC	0.021	0.028
J7	Wai Yip Street / Kei Yip Street	Not a signal controlled or priority junction			

Notes: ⁽¹⁾ RC – Reserve Capacity RFC – Ratio of Flow to Capacity

⁽²⁾ Kerbside on-street activities are reflected in the junction performance

- 2.7 The results in Table 2.1 indicate that the junctions now operate with capacities during the AM and PM peak hours.

Pedestrian Facilities

- 2.8 Good pedestrian facilities provided in the vicinity of the Subject Site, including footpaths, and at-grade pedestrian crossings at the signalised road junctions.

Availability of Public Transport Facilities

- 2.9 The Subject Site is well-served by various public transport services, including franchised bus and green minibus (“GMB”), and these services operate mainly along Hoi Yuen Road, Wai Yip Street and Kwun Tong Road. The closest entrance to the MTR Kwun Tong Station is at Hoi Yuen Road, which is some 670 metres or 10 minutes’ walk away. Details of the franchised bus and GMB routes operating in the vicinity of the Subject Site are presented in Figure 2.10 and Table 2.2.

TABLE 2.2 FRANCHISED BUS AND GMB SERVICES OPERATING CLOSE TO THE SUBJECT SITE

Route	Routing	Frequency (minutes)
KMB 1A	Sau Mau Ping (Central) – Star Ferry	5 – 15
KMB 3D	Tsz Wan Shan (Central) – Kwun Tong (Yue Man Square)	4 – 16

3.0 THE PROPOSED REDEVELOPMENT

Development Schedule

3.1 The Proposed Redevelopment is a Hotel with 448 guest rooms and 1,232.237m² GFA of conference or banqueting facilities.

Provision of Internal Transport Facilities

3.2 A comparison of the internal transport facilities recommended by the Hong Kong Planning Standards and Guidelines (“HKPSG”) and the internal transport facilities provided are presented in **Table 3.1**.

TABLE 3.1 COMPARISONS OF THE INTERNAL TRANSPORT FACILITIES FOR THE PROPOSED REDEVELOPMENT

HKPSG Recommendation for a Hotel with (i) 448 guest rooms, (ii) 1,232.237m ² GFA conference and banquet facilities	Proposed Provision
<u>Car Parking Space</u>	
(i) 1 car parking space per 100 rooms. 448 / 100 = 4.5, say <u>5 nos.</u>	9 nos. including (i) 8 nos. @ 5m (L) x 2.5m (W) x 2.4m (H), (ii) 1 no. @ 5m (L) x 3.5m (W) x 2.4m (H) for persons with disabilities = HKPSG recommendation
(ii) 0.5-1 car space per 200m ² GFA of conference and banquet facilities Minimum = 1,232.237 / 200 x 0.5 = 3.1, say <u>4 nos.</u> Maximum = 1,232.237 / 200 x 1 = 6.2, say <u>7 nos.</u>	
<u>Total [(i) + (ii)]</u> Minimum = 5 + 4 = <u>9 nos.</u> Maximum = 5 + 7 = <u>12 nos.</u>	
<u>Motorcycle Parking Space</u>	
5 to 10% of the total provision for private cars Minimum = 9 x 5% = 0.5, say <u>1 no.</u> Maximum = 9 x 10% = 0.9, say <u>1 no.</u>	1 no. @ 2.4m (L) x 1m (W) x 2.4m (H) = <u>HKPSG recommendation</u>
<u>Taxi and Private Car Layby</u>	
Minimum 3 lay-by for taxis and private cars for 300-599 rooms = <u>3 nos.</u>	3 nos. @ 5m (L) x 2.5m (W) x 2.4m (H) = <u>HKPSG recommendation</u>
<u>Single-Deck Tour Bus Layby</u>	
Minimum 2-3 lay-by for single-deck tour buses for 300-899 rooms = <u>2-3 nos.</u>	3 nos. @ 12m (L) x 3.5m (W) x 3.8m (H) = <u>HKPSG recommendation</u>
<u>Goods Vehicle Loading / Unloading Bay</u>	
0.5 - 1 goods vehicle bay per 100 rooms Minimum = 448 / 100 x 0.5 = 2.2, say <u>3 nos.</u> Maximum = 448 / 100 x 1 = 4.5, say <u>5 nos.</u>	2 nos. @ 7m (L) x 3.5m (W) x 3.6m (H) for Light Goods Vehicles, plus 1 no. @ 11m (L) x 3.5m (W) x 4.7m (H) for Heavy Goods Vehicles = HKPSG recommendation

3.3 **Table 3.1** shows that the internal transport facilities provided agree with the recommendations of the HKPSG. The carpark layout plans for G/F and B1/F are shown in **Figures 3.1 – 3.2**.

Swept Path Analysis

- 3.4 The CAD-based swept path analysis program, Autodesk Vehicle Tracking, was used to check the ease of vehicle manoeuvring, and the swept path analysis drawings for critical movements are found in Appendix 2. Vehicles are found to have no manoeuvring problems and all vehicles could enter and leave the spaces with ease.

4.0 TRAFFIC IMPACT

Design Year

- 4.1 The Proposed Redevelopment is expected to be completed by 2029, and the design year adopted for the capacity analysis is 2032, i.e. 3 years after the completion of the development.

Traffic Forecasting

- 4.2 The 2032 traffic flows used for the junction analysis are produced with reference to: (i) 2031 traffic flows from the Base District Traffic Model (“BDTM”); (ii) estimated traffic growth from 2031 to 2032; (iii) the planned developments in the vicinity of the Proposed Redevelopment, and (iv) additional traffic generated by the Proposed Redevelopment.

Estimated Traffic Growth Rate from 2031 to 2032

- 4.3 Reference is made to the 2019 – based Territorial Population and Employment Data Matrix (“TPEDM”) data produced by Planning Department for Kwun Tong District, which are for 2019, 2026 and 2031 and are presented in Table 4.1.

TABLE 4.1 2019-BASED TPEDM DATA PRODUCED BY PLANNING DEPARTMENT FOR KWUN TONG DISTRICT

Item	TPEDM Estimation / Projection		
	2019	2026	2031
Population	693,900	769,400	741,300
Employment	395,350	410,550	408,250
Total	1,089,250	1,179,950	1,149,550
Average Growth %	From 2019 to 2026: +1.15% From 2019 to 2031: +0.45%	From 2026 to 2031: -0.52%	N/A

- 4.4 Table 4.1 shows that the highest average annual growth rate is 1.15%. In view that there is no estimation beyond 2031 and to err on the high side, the growth rate of 1.15% per annum is adopted for the traffic growth between 2031 and 2032.

Planned Developments in the Vicinity of the Proposed Redevelopment

- 4.5 The planned developments included in the 2032 reference traffic flows are presented in Table 4.2.

TABLE 4.2 PLANNED DEVELOPMENTS IN THE VICINITY OF THE PROPOSED REDEVELOPMENT

Site	Planning Application No. / Plan No.	Address

17	A/K14/820	73 – 75 Hung To Road
18	A/K14/822	25 Tai Yip Street, Kwun Tong
19	S/K14S/URA1/3 Urban Renewal Authority's (URA) latest 'Vertical City' scheme of a mixed use development	Areas 4 and 5 of Kwun Tong Town Centre
20	N/A	EKEO Lai Yip Street Development
21	N/A	Kwun Tong Action Area
22	N/A	Kowloon Bay Action Area

4.6 The infrastructure and road network included in the BDTM are as follows:

- Kai Tak Development
- Tseung Kwan O – Lam Tin Tunnel
- Central Kowloon Route
- Trunk Road T2 between Central Kowloon Route and Tseung Kwan O – Lam Tin Tunnel

Traffic Generated by the Proposed Redevelopment

4.7 The trip rates found in the TPDMM are not used because none of the surveyed hotels are located in Business Areas. Hence, the traffic generated by the Proposed Redevelopment is estimated based trip generation rates of surveyed hotels in Business Areas including the following:

- 254-room Nina Hotel Kowloon East at 38 Chong Yip St, Kwun Tong
- 298-room Tuen Mun Pentahotel at 6 Tsun Wen Road, Tuen Mun

4.8 The adopted trip generation rates and the calculated traffic generation associated with the Proposed Redevelopment are presented in Table 4.3.

TABLE 4.3 TRAFFIC GENERATION OF THE PROPOSED REDEVELOPMENT

Item	AM Peak Hour			PM Peak Hour		
	In	Out	2-way	In	Out	2-way
Trip Generation Rates for hotel (pcu/hour/guest room)						
In-house trip generation for hotel	0.0591	0.0433	NA	0.0512	0.0472	NA
Traffic Generation of Proposed Redevelopment (pcu/hour)						
448 guest rooms	27	20	47	23	22	45

4.9 Table 4.3 shows the Proposed Redevelopment generates 47 and 45 more pcu (2-way) during the AM and PM peak hours respectively.

Comparison of Traffic Generation between the Approved S16 Scheme and the Proposed Redevelopment

4.10 The traffic generated by the Proposed Redevelopment is compared with the traffic generated by the Approved S16 Scheme at 201 and 203 Wai Yip Street, and is presented in Table 4.4.

TABLE 4.4 COMPARISON OF TRAFFIC GENERATION BETWEEN THE PROPOSED REDEVELOPMENT AND THE APPROVED S16 SCHEME

Scheme	Traffic Generation (pcu/hour)					
	AM Peak Hour			PM Peak Hour		
	In	Out	2-way	In	Out	2-way
Approved S16 Scheme at 203 Wai Yip Street (TPB ref: A/K14/778)	19	13	32	15	19	34
Approved S16 Scheme at 201 Wai Yip Street (TPB ref: A/K14/808)	35	25	60	20	25	45
Total [A]	54	38	92	35	44	79
Proposed Redevelopment [B]	27	20	47	23	22	45
Difference [B] – [A]	-27	-18	-45	-12	-22	-34

4.11 Table 4.4 shows that compared with the Approved S16 Scheme at 201 and 203 Wai Yip Street, the Proposed Redevelopment generates 45 pcu and 34 pcu (2-way) less during the AM and PM peak hours, respectively. Hence, the Proposed Redevelopment is a better-off scheme.

Planned Traffic Improvement in the Vicinity of the Proposed Redevelopment

4.12 The planned improvement schemes in the vicinity of the Proposed Redevelopment are summarized in Table 4.5.

TABLE 4.5 PLANNED TRAFFIC IMPROVEMENT SCHEMES IN THE VICINITY OF THE PROPOSED REDEVELOPMENT

Junction		Description of the Works	Indicative Layout	Source	Assumed Completion Year
J2	Wai Yip Street / Hoi Yuen Road	Modification of Wai Yip Street / Hoi Yuen Road roundabout into a signal controlled junction	Please refer to Appendix 3	Kwun Tong District Council	Before 2032
J6	Kei Yip Street / Kei Yip Lane	Change Kei Yip Lane from 2-way to 1-way			
J7	Wai Yip Street / Kei Yip Street	Change to 2-way direction			

2032 Traffic Flows

4.13 Year 2032 traffic flows for the following cases are derived:

2032 without the Proposed Redevelopment [A] = 2031 traffic flows derived with reference to BDTM + estimated total growth from 2031 to 2032+ traffic generated by the planned developments in the vicinity of the Proposed Redevelopment

2032 with the Proposed Redevelopment [B] = [A] + traffic generated by the Proposed Redevelopment (Table 4.3)

4.14 The 2032 peak hour traffic flows for the cases without and with the Proposed Redevelopment, are shown in Figures 4.1 - 4.2, respectively. The ingress / egress route for traffic generated by the Proposed Redevelopment are shown in Figures 4.3.

2032 Junction Operational Performance

4.15 Year 2032 capacity analysis for the cases without and with the Proposed Redevelopment are summarized in Table 4.6 and detailed calculations are found in the Appendix 1.

TABLE 4.6 2032 JUNCTION OPERATIONAL PERFORMANCE

Ref.	Junction	Type of Junction / Parameter ⁽¹⁾	Without the Proposed Redevelopment		With the Proposed Redevelopment	
			AM Peak	PM Peak	AM Peak	PM Peak
J1	Hung To Road / Hoi Yuen Road / Wai Yip Street	Signal / RC	57%	70%	57%	70%
J2	Wai Yip Street / Hoi Yuen Road ⁽³⁾	Signal / RC	20%	32%	20%	32%
J3	Hung To Road / Tsun Yip Street ⁽²⁾	Signal / RC	18%	37%	18%	37%
J4	Wai Yip Street / Tsun Yip Street ⁽²⁾	Signal / RC	41%	49%	39%	49%
J5	Wai Yip Street / How Ming Street ⁽²⁾	Signal / RC	39%	55%	38%	55%
J6	Kei Yip Street / Kei Yip Lane ⁽³⁾	Priority - RFC	0.661	0.705	0.665	0.708
J7	Wai Yip Street / Kei Yip Street ⁽³⁾	Priority - RFC	0.442	0.302	0.448	0.309

Notes: ⁽¹⁾ RC – Reserve Capacity RFC – Ratio of Flow to Capacity

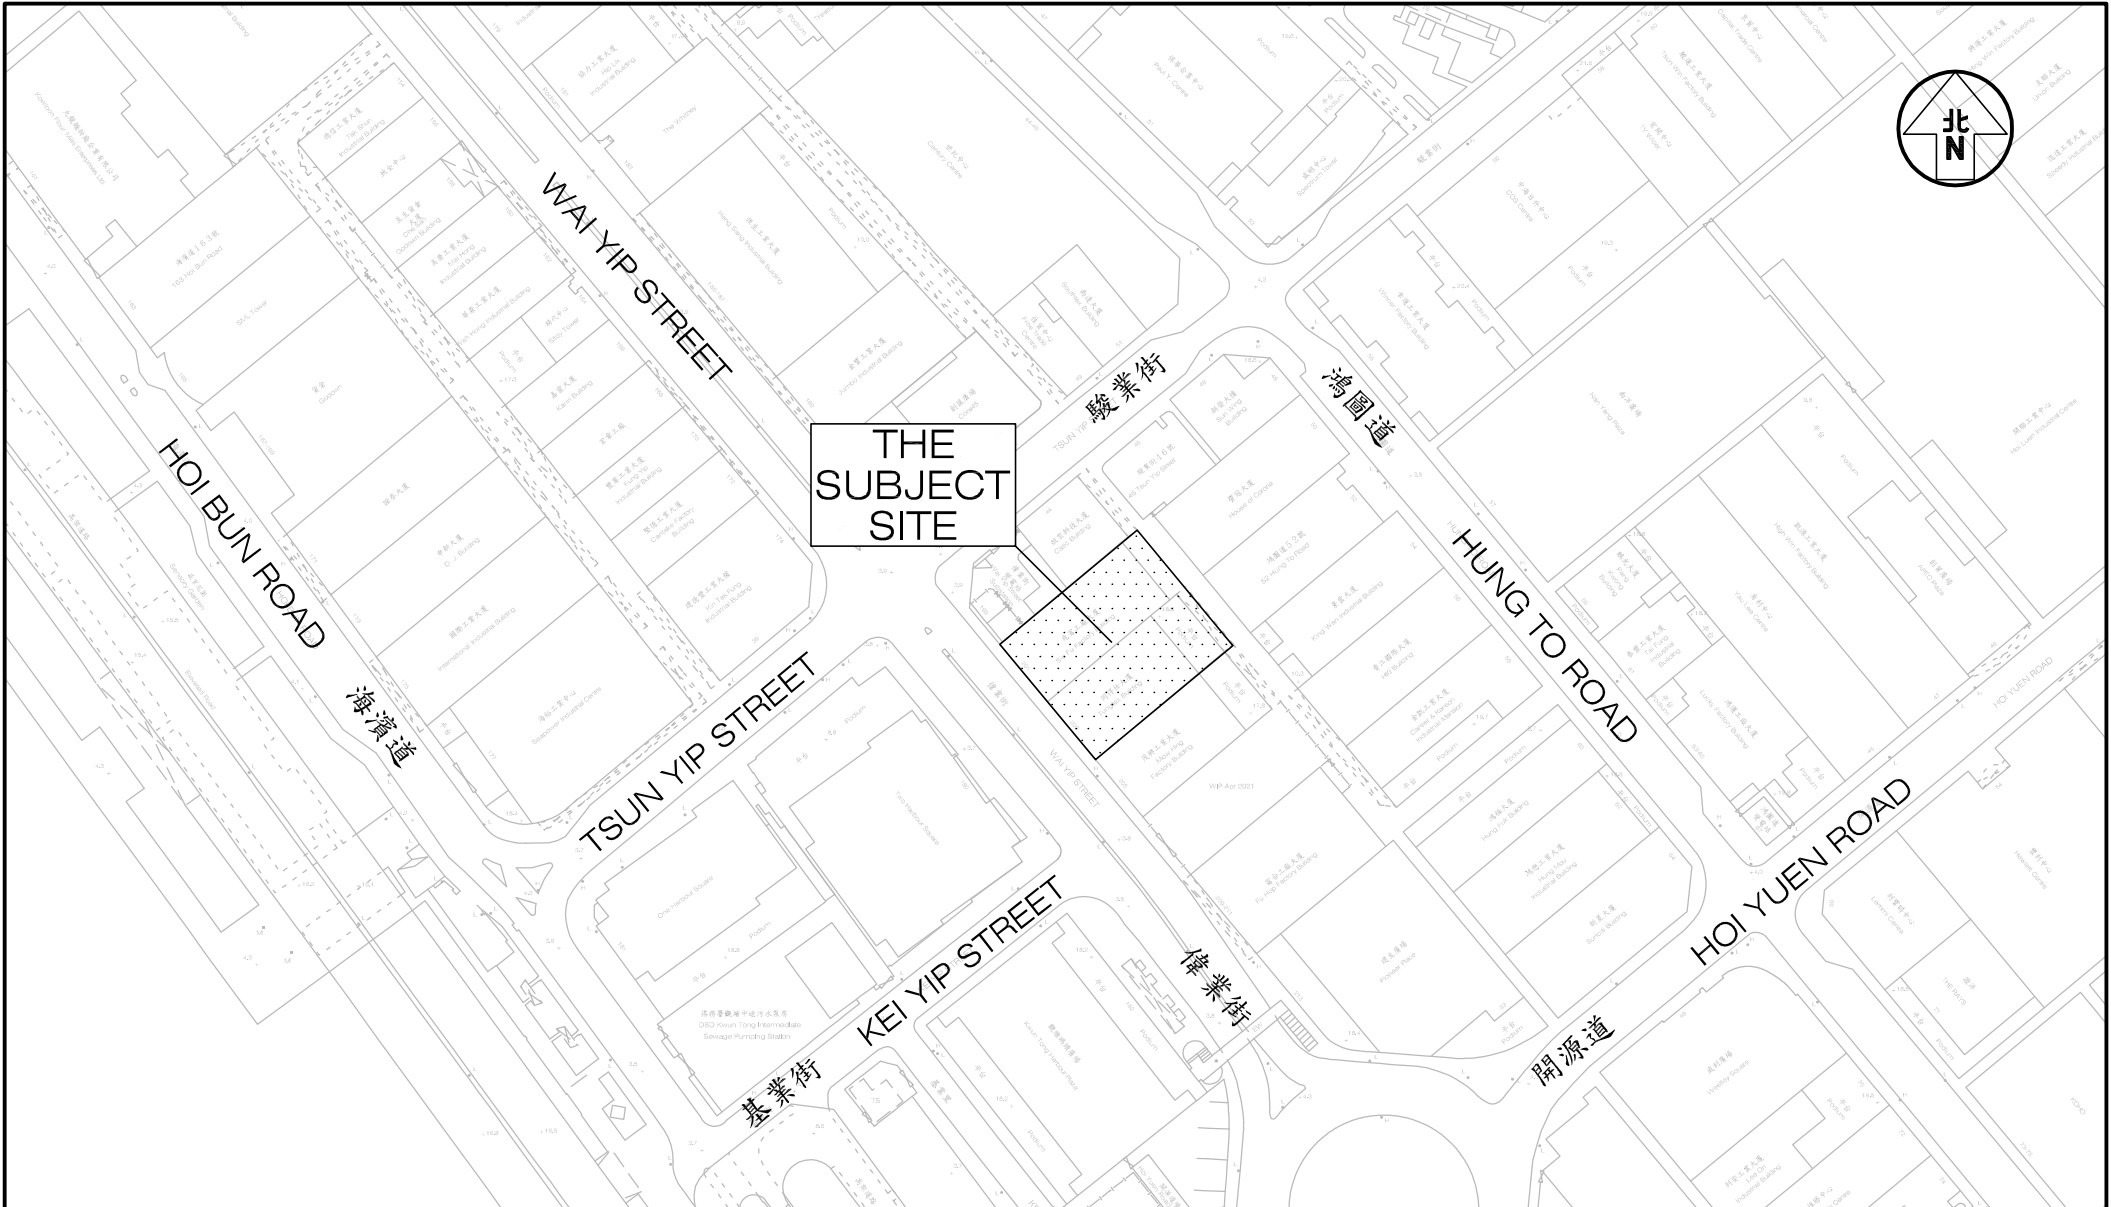

⁽²⁾ Kerbside on-street activities are reflected in the junction performance

⁽³⁾ Junction Improvement Scheme by other project has been incorporated in the Assessment as explained in Table 4.5

4.16 Table 4.6 shows that the key junctions operate with capacities during the AM and PM peak hours for the cases without and with the Proposed Redevelopment.

5.0 CONCLUSION

- 5.1 The Subject Site is located at 201 and 203 Wai Yip Street in Kwun Tong. It is currently occupied by the Siu Fu Factory Building and the Tungtex Building.
- 5.2 The Applicant intends to redevelop the 2 Existing Buildings into a hotel with 448 guest rooms and 1,232.237m² GFA of conference or banqueting facilities.
- 5.3 Manual classified counts were conducted at junctions located in the vicinity of the Proposed Redevelopment in order to establish the peak hour traffic flows. Currently, the junctions were found to operate with capacities during the AM and PM peak hours.
- 5.4 The Proposed Redevelopment run-in/out is provided at Wai Yip Street. The internal transport facilities provided comply with recommendations of the HKPSG.
- 5.5 The Proposed Redevelopment is expected to be completed by 2029, and the junction capacity analysis is undertaken for year 2032. For the design year 2032, the junctions analysed are expected to operate with capacities during the peak hours for the case without and with Proposed Redevelopment.
- 5.6 It is concluded that the Proposed Redevelopment will result in no adverse traffic impact to the surrounding road network. From traffic engineering grounds, the Proposed Redevelopment is acceptable.

$$Q-CB = F[745 - 0.364Y(q-AC + q-AB)]$$

The geometric parameters represented by D, E, F are:

$$D = [1 + 0.094(w-BA - 3.65)][1 + 0.0009(V-rBA - 120)][1 + 0.0006(V-IBA - 150)]$$

$$E = [1 + 0.094(w-BC - 3.65)][1 + 0.0009(V-rBC - 120)]$$

$$F = [1 + 0.094(w-CB - 3.65)][1 + 0.0009(V-rCB - 120)]$$

where $Y = 1 - 0.0345W$

q-AB, etc = the design flow of movement AB, etc

W = major road width

W-CR = central reserve width

w-BA, etc = lane width to vehicle

v-rBA, etc = visibility to the right for waiting vehicles in stream BA, etc

v-IBA, etc = visibility to the left for waiting vehicles in stream BA, etc

Geometry :	Input		Input		Input		Calculated	
	W	17.90	V-rBA	0	w-BA	0.00	D	0.5332
	W-CR	1.00	V-IBA	0	w-BC	3.80	E	0.9593
			V-rBC	60	w-CB	0.00	F	0.5860
			V-rCB	0			Y	0.3825

Analysis :

Traffic Flows, pcu/hr	AM	PM	Capacity, pcu/hr		AM	PM
q-CA	0	0	Q-BA		258	246
q-CB	0	0	Q-BC		564	542
q-AB	835	733	Q-CB		303	295
q-AC	801	1002	Q-BAC		564	542
q-BA	0	0				
q-BC	249	164				
f	1.000	1.000				

Ratio-of-flow to Capacity	AM	PM
B-A	0.000	0.000
B-C	0.442	0.302
C-B	0.000	0.000

Noted: Junction Improvement Scheme by Other Project

Priority Junction Analysis

Junction:	Wai Yip Street / Kei Yip Street		
Design Year:	2032	Job Number:	J7360
Scenario:	With the Proposed Redevelopment		Date: 20 August 2024
			P. 20

The predictive equations of capacity of movement are:

$$Q-BA = D[627 + 14W-CR - Y(0.364q-AC + 0.144q-AB + 0.229q-CA + 0.52q-CB)]$$

$$Q-BC = E[745 - Y(0.364q-AC + 0.144q-AB)]$$

$$Q-CB = F[745 - 0.364Y(q-AC + q-AB)]$$

The geometric parameters represented by D, E, F are:

$$D = [1 + 0.094(w-BA - 3.65)][1 + 0.0009(V-rBA - 120)][1 + 0.0006(V-IBA - 150)]$$

$$E = [1 + 0.094(w-BC - 3.65)][1 + 0.0009(V-rBC - 120)]$$

$$F = [1 + 0.094(w-CB - 3.65)][1 + 0.0009(V-rCB - 120)]$$

where $Y = 1 - 0.0345W$

q-AB, etc = the design flow of movement AB, etc

W = major road width

W-CR = central reserve width

w-BA, etc = lane width to vehicle

v-rBA, etc = visibility to the right for waiting vehicles in stream BA, etc

v-IBA, etc = visibility to the left for waiting vehicles in stream BA, etc

Geometry :	Input		Input		Input		Calculated
