

**S16 Planning Application for
Proposed Composite Redevelopment with Residential, Commercial and Trade Mart,
Social Welfare Facilities and School uses and Minor Relaxation of Building Height Restriction
at New Kowloon Inland Lot No. 6032, 1 Trademart Drive, Kowloon Bay, Kowloon**

(S16 Planning Application No. A/K22/37)

Items	Comments	Responses
<u>1</u>	<u>Comments from Transport Department (Contact Person: Mr Vincent CHAN; Tel: 2399 2510)</u>	
	General Comments	
1.1	<p>General</p> <p>No traffic queue originated from the carpark, loading/unloading area and/or pick-up/drop-off area extending onto Trademart Drive, Wang Chin Street and/or other public roads in vicinity should be allowed. The applicant should implement proper traffic management control measures within the Site to prevent such traffic queue.</p>	<p>Noted.</p> <p>To minimise the likelihood of vehicle tailback when entering the basement car park, the car park entry gates would also be positioned as far away as possible from the run-in / out. Detailed design of the internal transport layout including the internal pick-up/drop-off area will be submitted in the GBP stage.</p>
1.2	<p>General</p> <p>In view of strong public request, road safety perspective and to improve/enhance the pedestrian connectivity of the proposed redevelopment, the applicant should construct the pedestrian crossing at the Trademart Drive (Brown Area as stated in the lease) near to Lam Hing Street and Wang Chin Street. The location of the proposed pedestrian crossing could be referred to Annex A.</p> <p>Please confirm if the applicant would carry out the proposed pedestrian crossing and provide the programme about its implementation/construction. Please also provide the design of the proposed pedestrian crossing for our review.</p> <p>The proposed pedestrian crossing should form part of this s 16 planning application.</p>	<p>The Applicant is willing to implement the planned cautionary crossing, as per the design drawing from EKEO found in Appendix C of the revised TIA report, at Trademart Drive as part of the KITEC redevelopment project.</p> <p>However, it should be noted that the redevelopment project is subject to the approval of this s16 planning application and subsequently, the submission of design drawings for approval by relevant government departments. Details on the construction programme will be provided to the relevant government department including TD as part of the approval conditions attached to the planning permission.</p>
1.3	<p>General</p> <p>To advise the strengthening of public transport service is required, and the split for using MTR Kai Tak and/or Kowloon Bay stations.</p>	<p>With reference to Serial No. TLB168 of “<i>Examination of Estimates of Expenditure 2023 – 24</i>” for Legislative Council Finance Committee Meetings, the current patronages of MTR Kwun Tong Line and Tuen Ma Line are 34,500 and 34,200 pph respectively.</p>

Items	Comments	Responses
		<p>By adopting the patronage split for the Proposed Redevelopment, say, 50% of rail-based passengers will use MTR Kowloon Bay Station and the remaining 50% will use MTR Kai Tak Station.</p> <p>The proposed enhancement of feeder services connecting the Proposed Redevelopment and MTR stations is presented in Paragraphs 4.37 – 4.42 of the revised TIA report (Annex 1 refers).</p>
1.4	<p>General To advise if the existing 120m layby at Trademart Drive will be maintained during and after the construction, and advise the proposed use for the layby after the commissioning of the redevelopment.</p>	<p>The existing 120m lay-by along Trademart Drive will be maintained during and after the completion of the Proposed Redevelopment.</p> <p>Subject to the provision of feeder services as identified in Paragraphs 4.37 – 4.42 of the revised TIA report, a section of this lay-by could be designated as bus stop/terminus (Annex 1 refers). Similar to the existing condition, the remaining section of lay-by would be for pick-up/drop-off activities.</p>
1.5	<p>General Please mark the "Brown Area" on the layout plan to show its extent.</p>	<p>The extent of Brown Area is shown in Figure 3.1 of the revised TIA report (Annex 1 refers).</p>
Comments on Appendix 2 - Traffic Impact Assessment Final Report		
1.6	<p>Para 2.19 (Table 2.7) Table 2.7 regarding the frequency of bus services is not updated (e.g. 5M, 74B, 98D and etc.</p>	<p>The frequency of bus services is updated as shown in Table 2.7 of the revised TIA report (Annex 1 refers).</p>
1.7	<p>Para 2.20 (Table 2.8) In view of the above change, the applicant to supplement if there are any updates on the projected carrying capacity and advise the calculation.</p>	<p>The existing occupancy of franchised bus and GMB services is estimated based on the actual service frequency obtained from the on-site survey. Hence, updating Table 2.8 of the TIA report is not required (Annex 1 refers).</p>
1.8	<p>Para 3.1 & Table 3.1 Please state in the report whether the existing car parking spaces (763 numbers) are the ancillary car parking spaces used for office, eating place and shop and services, exhibition or convention hall, and place of entertainment. Please advise the amount of parking spaces for each type</p>	<p>The Applicant has confirmed that all the existing car parking spaces in KITEC (763 nos.) are ancillary to the uses provided, i.e. Office, <i>Eating Place and Shop and Services</i>, <i>Exhibition or Convention Hall</i> and <i>Place of Entertainment</i>.</p>

Items	Comments	Responses
	<p>of use (i.e. office, eating place and shop and services, exhibition or convention hall, and place of entertainment).</p>	<p>According to the Lease for KITEC, car parking spaces shall be provided “<i>at the rate of not less than one space for every 240 square metres or part thereof of gross floor area ... subject to a maximum of 763 spaces</i>”. Based on the maximum provision, the Lease has no specific requirement on the actual car parking provision for each type of use in KITEC.</p>
<p>1.9</p>	<p>Para 3.5 & Table 3.3 As referring to Appendix B "Comment from SWD and extracts of operational requirements for social welfare facilities", 6 designated parking spaces for 6 private light buses (8m (L) x 3m (W) x 3.3m (H)) and 1 shared loading/unloading area for private light buses and ambulances.</p> <p>However, in Table 3.3, 3 private light bus parking spaces and 1 shared use loading/unloading bay are proposed.</p> <p>Please clarify the discrepancies among the private light bus parking spaces and advise the correct numbers of private light buses parking spaces. Please confirm the parking and loading/unloading requirements with SWD.</p>	<p>As per the operational requirements on a 120-place Day Care Centre for the Elderly (DE) with reference to other planning application, 6 private light bus (PrLB) parking spaces are required for 120 places. Based on the pro-rata basis, 1 PrLB parking space shall be provided for 20 places in DE. Hence, 2 PrLB parking spaces are required for the proposed 30-place DE.</p> <p>Together with one PrLB parking space for Residential Care Home for the Elderly (RCHE), a total of 3 PrLB parking spaces are provided for the social welfare facilities. Furthermore, 1 shared-use HGV loading / unloading bay is provided.</p> <p>Nevertheless, please be clarified that SWD has “<i>no objection in principle from service perspective for the applicant’s proposed development of 60-place RCHE and 30-place DE on conditions that the RCHE and DE including the associated parking spaces and loading and unloading bay are running on privately-financing mode ...</i>” on this planning application. Appendix B of the revised TIA report has been updated accordingly.</p>
<p>1.10</p>	<p>Para 3.16 Apart from the proposed Northern Footbridge Extension and Southern Footbridge, please advise if there would be any proposed footbridge connection to enhance the connectivity and accessibility between the proposed redevelopment and the Kowloon Bay area and also the MTR Kowloon Bay Station.</p>	<p>It is noted that under the Kowloon Bay Business Area Pedestrian Environment Improvement Feasibility Study, EKEO has introduced a series of short to long-term at-grade measures and a comprehensive pedestrian linkage network (i.e. Green Spine and Green Link) to enhance accessibility from MTR Kowloon Bay MTR Station to the Site via Kowloon Bay Business Area (KBBA).</p> <p>The Proposed Development will also further extend the Green Link and Green Spine network by proposing at grade open plaza in the development. It could further provide seamless connection</p>

Items	Comments	Responses
		and extension of the network beyond KBBA. Please note that our development is not part of the KBBA.
1.11	<p>Para. 3.19-3.20 Please advise the future management and maintenance responsibilities of the proposed Northern Footbridge Extension. Please confirm if the public can access the proposed Northern Footbridge Extension free of charge.</p> <p>Please seek comments and agreement from EMSD/ ArchSD regarding the connection of the proposed Northern Footbridge Extension with the existing KITEC-EMSD footbridge.</p>	<p>The Northern Footbridge Extension will be constructed by the Applicant. The members of the public could access the Proposed Northern Footbridge Extension free of charge with 24-hour access.</p> <p>The Applicant noted that EMSD has NO objection to the proposed Northern Footbridge Extension. With full support from the EMSD, the Proposed Northern Footbridge Extension will form part of the S16 Planning Application. The Applicant has been closely liaising with EMSD, EKEO, ArchSD and relevant government department(s) on the Proposed Northern Footbridge Extension.</p>
1.12	<p>Para. 3.21-3.23 Please advise the future management and maintenance responsibilities of the proposed Southern Footbridge. Please confirm if the public can access the proposed Southern Footbridge free-of-charge.</p>	<p>The proposed Southern Footbridge (also known as Southern Link Bridge) (as part of the S16 Planning Application) will be constructed, managed and maintained by the Applicant. The public can access the Proposed Southern Footbridge free-of-charge with 24 hours access.</p>
1.13	<p>Para 3.23 The proposed Northern Footbridge Extension and Southern Footbridge would form part of comprehensive elevated pedestrian network through the proposed redevelopment to enhance the connectivity and accessibility between the South Apron Area of KTD, MTR Kai Tak Station and the Kowloon Bay Business Area. Also, the proposed Southern Footbridge connection forms part of the overall redevelopment. The details of the proposed Northern Footbridge Extension and Southern Footbridge should form part of the s16 planning application.</p> <p>In view of the above, please explain why the Northern Footbridge Extension and Southern Footbridge do not form part of this s16 planning application.</p>	<p>Please note that the Northern Footbridge Extension and Southern Footbridge (or Southern Link Bridge) <u>will form part of this s16 planning application</u> with the full support from EMSD and TD.</p>

Items	Comments	Responses
1.14	<p>Para. 4.14 & Table 4.4 Please advise the completion year of the major planned development.</p>	<p>The completion year of the major planned development is included in Table 4.4 of the revised TIA report (Annex 1 refers).</p>
1.15	<p>Para. 4.33 It is assumed in the TIA that all passengers will travel to the MTR station by interchanging with bus and minibus services. The applicant should identify any public services need, in particularly the feeder services connecting to/from the rail stations to be strengthened.</p>	<p>The proposed enhancement of feeder services connecting the Proposed Redevelopment and MTR stations is presented in Paragraphs 4.37 – 4.42 of the revised TIA report (Annex 1 refers).</p>
1.16	<p>Para 5.5 It states that the proposed redevelopment traffic generation is 27% and 29% less compared to the approved redevelopment during the AM and PM peak hours respectively.</p> <p>However, as referring to Table 4.8, the proposed redevelopment traffic generation is 26% and 30% less compared to the approved redevelopment during the AM and PM peak hours respectively. Please clarify.</p>	<p>The typos in Paragraph 5.5 of the TIA report have been revised (Annex 1 refers).</p>
1.17	<p>Figure 3.1 It is noted that the accesses of "ramp to 1 /F", "ramp to B 1 /F" and taxi layby are in close proximity.</p> <p>In view of level difference, the drivers leaving the "ramp to 1/F" may not have sufficient sightline to view the vehicles leaving the "ramp to B1/F". Please review and provide necessary traffic measures to improve the road safety at the concerned location.</p> <p>To improve the pedestrian connectivity of the existing bus stop at Kai Fuk Road and the proposed redevelopment, please advise if there would be a proposed pedestrian crossing at the markup location in Annex B.</p>	<p>As shown in Figure 3.1 of the revised TIA report, the up-ramp to 1/F has been shifted further from the run-in / out by around 8m. In addition, the fence wall in between the two adjoining driveways has been removed and the sightline of motorists leaving 1/F is improved.</p> <p>A standard cautionary crossing (i.e. with drop kerbs and tactile warning strips) at Trademart Drive outside the proposed run-in / out will be constructed by the Applicant as part of the Proposed Redevelopment.</p>
1.18	<p>Figure 3.2 and 3.3 Please refer to Annex C for the markup comments on the car park arrangement. Please confirm if the width of the driveway and aisle width of the parking spaces fulfil with the relevant BD' s requirements, such as BD's PNAP APP-111.</p>	<p>Please refer to the following amendments in response to the mark-up comments:</p> <ul style="list-style-type: none"> • Traffic directions are indicated in Figures 3.2 and 3.3; • Additional swept path analysis drawings have been prepared; and

Items	Comments	Responses
		<ul style="list-style-type: none"> The width of driveways and parking aisles has been indicated and the width satisfies the PNAP-APP-111 requirements. <p>After the s16 planning application has been approved, the Applicant will carry out detailed design of the internal transport layout in accordance to PNAP APP-111.</p>
1.19	<p>Figure 3.4 Please advise if the loading/unloading bays would intrude into the EVA at the first floor. Please seek comments from FSD and BD if such arrangement fulfils the relevant buildings and fire safety ordinance requirements. Please use color or hatched marking to highlight the area of EVA.</p> <p>Also, please advise the purpose of cul-de-sac at southern side of the first floor, near to the ramp to G/F. Please provide the swept path analyses for demonstration its feasibility.</p>	<p>The loading / unloading bays and lay-bys on 1/F will not encroach into the EVA demarcated in red colour. Comments and agreement from relevant government departments will be sought during the detailed design stage.</p> <p>The turn-around area outside Tower 1 has been changed to be hammerhead and is suitable for a 12m fire appliance to conduct a 3-point turn.</p>
1.20	<p>Figure 3.5 Please advise if there is any direct connection between the proposed Southern Footbridge and the existing KITEC-EMSD footbridge (also the proposed Northern Footbridge Extension) within the proposed redevelopment, which is barrier-free, 24-hour access and free-of charge.</p>	<p>A 24-hour pedestrian circulation with barrier free within the proposed development between the northern footbridge (to the existing EMSD Headquarters) and the proposed southern link bridge towards Kai Fuk Road will be provided for a pedestrian seamless connection. Public can access the internal linkage free of charge.</p>
1.21	<p>Appendix A Please refer to Annex D for the markup comments on Junction calculation J2 (Kai Cheung Road/Wang Kwong Road) and J9 (Sheung Yee Road/Wang Chiu Road).</p>	<p>The clarification to comments on the junction capacity analysis for J2 and J9 is attached in Table 1 of this response-to-comment.</p>
	<p><u>Follow up questions</u></p>	
1.22	<p>As the Applicant has not revised the relevant parts in the report in supporting the captioned s.16 planning application, based on their R-to-C of the said pre-submission</p>	<p>Please refer to the responses in Items 1.23 and 1.24 of this RtoC.</p>

Items	Comments	Responses
	Below please find the additional comments on the captioned s.16 planning application, further to the comments enclosed in our preceding email dated 13.6.2024:	
1.23	As referring to lease Clause (12)(g)(iii) Public Vehicle Park, "...the Purchaser may underlet the individual parking spaces provided within the Public Car Park for short term parking...". In view of this, please advise if the owner had underlet any parking spaces for short-term parking purpose? If yes, please provide the relevant record and the numbers of parking spaces Please confirm if all the car parking spaces in KITEC are the ancillary parking spaces used for office, eating place and shop and services, exhibition or convention hall, and place of entertainment.	<p>The Applicant did not seek permission from Lands Department regarding Clause (12)(g)(iii) of the Lease, and did not underlet individual car parking spaces for short-term parking under this Clause.</p> <p>The Applicant confirms that all the existing car parking spaces in KITEC are ancillary to the uses provided, i.e. Office, <i>Eating Place and Shop and Services, Exhibition or Convention Hall and Place of Entertainment</i>.</p>
1.24	Please confirm if the public could access between Kai Cheung Road footbridge and proposed Southern Footbridge and the street level through the proposed redevelopment free-of-charge, barrier free and 24-hour access.	Within the Proposed Redevelopment, barrier-free and 24-hour access will be provided connecting Kai Cheung Road footbridge and the proposed Southern Footbridge to the street level. Public can access these connections free of charge.
Additional Responses to Item 10.26 of Further Information No.1 Part 1		
10.26	<p><u>EMFAC-HK Input</u></p> <p>i. Para. 4.5.28 - In view of the exceedances of the results, please consider to use the daily profile of averaged temperature and relative humidity data in each hour for each month for long-term impact.</p>	<p>It is clarified that exceedance occurs at site boundary assessment points. Since there are no air sensitive uses within the area with exceedances, use of daily profile of averaged temperature and relative humidity data in each hour for each month for long-term impact would not be considered.</p> <p>With the assumptions of worst-case scenario adopted for most of the emission sources, the relevant AQO is well-met ($\sim 9\mu\text{g}/\text{m}^3$ below the AQO criteria for annual average NO₂ concentration at the first level of residential units and RCHE) for the area with air sensitive use even in case of any minor adjustment in assumptions and floor height necessary (e.g. for the floors in the retail block with GIC uses with a height equal or higher than 19.35mPD) in future.</p>

Items	Comments	Responses
		If the TPB and relevant department consider it appropriate, the Applicant has no objection to the imposition of an approval condition to submit an updated AQIA, which will incorporate any minor adjustment in the assumption for the update of the AQIA, to the satisfaction of EPD or TPB.

TABLE 1 RESPONSE TO COMMENTS ON JUNCTION CAPACITY ANALYSIS

Ref.	Junction	Approach	Phase	Comments from Transport Department	Responses (see NOTE below)
J2	Kai Cheung Road / Wang Kwong Road	Kai Cheung Road WB	C2 and C3	There should be flared lanes	The flare lane C2 is around 80m long and its average vehicle queue length is only around 60m, i.e. can contain one full cycle capacity of traffic. Hence, Condition (i) of NOTE applies and normal saturation flow is applicable for C2.
			C4 and C5	There should be flared lanes	According to the planned improvement scheme, Kai Cheung Road westbound will be widened to 4 traffic lanes. Hence, C4 and C5 are not flare lanes.
			D3	There should be 1 more right turn flare lane.	The flare lane for right turning movement has been included in D3.
			Please consider flare lanes effect and review critical y & RC.		
J9	Sheung Yee Road / Wang Chiu Road	Wang Chiu Road SB	C1	This should be treated as flare lane.	The flare lane C1 is around 55m long and its average vehicle queue length is only around 52m, i.e. can contain one full cycle capacity of traffic. Hence, Condition (i) of NOTE applies and normal saturation flow is applicable for C1.
			Please consider flare lanes effect and review critical y & RC.		

NOTE: Extract from Volume 4 Chapter 2 Paragraph 2.4.2.1 of Transport Planning and Design Manual (TPDM)

The saturation flow per lane (S) expressed in terms of passenger car units per hour (pcu/h), with no turning traffic may be given by

$S = 1940 + 100(W - 3.25)$ for nearside lane or single lane entries

$S = 2080 + 100(W - 3.25)$ for non-nearside lanes

where W is the lane width at entry in metres.

Condition (i): When the additional lane at the stopline is available for a distance back from the stopline at least sufficient to contain one full cycle capacity of traffic, the above methods of estimation of saturation flow apply.

Condition (ii): If the signal approach is only widened very close to the stopline, then the above formulae may be a considerable overestimate capacity. A more realistic approach capacity should be deduced from entry lanes before widening plus an allowance for extra vehicles stored every cycle in the additional lane provided near the intersection. In these circumstances, on site estimation of saturation flow will be necessary.

1.0 INTRODUCTION

Background

- 1.1 The subject site is located at New Kowloon Inland Lot No. 6032 at 1 Trademart Drive in Kowloon Bay. The existing building at the subject site is known as the Kowloon bay International Trade & Exhibition Centre (KITEC). The location of the subject site is shown in Figure 1.1.
- 1.2 ***On 17th March 2023, the Town Planning Board (TPB) approved the s16 planning application (TPB No. A/K22/34) for redevelopment of KITEC with total commercial GFA of 164,872m² (the "Approved Redevelopment"), including 132,437m² for "Office", 21,150m² for "Eating Place" and "Shop and Services", and 11,285m² for "Exhibition or Convention Hall".***
- 1.3 The Owner of KITEC (the "Applicant") has the intention to modify the Approved Redevelopment into a residential cum commercial development with 1,881 flats, 27,130m² for "Office", 8,845m² for "Eating Place" and "Shop and Services", 11,285m² for "Exhibition or Convention Hall" with supporting "Social Welfare Facility" and "School (Kindergarten)" (the "Proposed Redevelopment").
- 1.4 For avoidance of doubt, the Proposed Redevelopment does not provide "Place of Entertainment".
- 1.5 The subject site is zoned "Other Specified Uses (OU)" annotated "Trade Mart and Commercial Development" under the Approved Kai Tak Outline Zoning Plan (OZP) No. S/K22/8. "Office", "Eating Place", "Shop and Services", "Exhibition or Convention Hall" and "School" are under "Column 1" uses of the OZP, while "Flat" and "Social Welfare Facility (not elsewhere specified)" are under "Column 2" uses.
- 1.6 CKM Asia Limited, a traffic and transportation planning consultancy firm, was commissioned to carry out a Traffic Impact Assessment (TIA) in support of the Proposed Redevelopment. This report describes the TIA undertaken.

Scope of the TIA

- 1.7 The main objectives of this TIA are as follows:
- To assess the existing traffic issues in the vicinity of the subject site;
 - To provide adequate internal transport facilities for the Proposed Redevelopment;
 - To quantify the amount of traffic generated by the Proposed Redevelopment; and
 - To examine the traffic impact of the Proposed Redevelopment on the local road network.

Contents of the Report

- 1.8 After this introduction, the remaining chapters contain the following:

- chapter two – describes the existing situation;
- chapter three – presents the Proposed Redevelopment;
- chapter four – describes the traffic and pedestrian impact analysis; and
- chapter five – presents the overall conclusion.

2.0 THE EXISTING SITUATION

Site and Road Network

- 2.1 The subject site fronts onto Trademart Drive to the east, Kai Fuk Road to the west and Kai Cheung Road to the north. The run-in / out of KITEC is located at Trademart Drive near its southern end.
- 2.2 The section of Trademart Drive and Wang Chin Street fronting KITEC are local roads. Lay-bys, taxi stand and motorcycle parking spaces are provided along these roads.
- 2.3 Kai Cheung Road is a dual carriageway 3-lane District Distributor, which connects with Kwun Tong Road to the east and Kai Fuk Road to the west. This road serves the Kowloon Bay Business Area.
- 2.4 Kai Fuk Road is a dual carriageway 3-lane Urban Trunk Road connecting Kai Tak Tunnel to the west and Kwun Tong Road to the east. It connects the central Kowloon and Kwun Tong. The section of Kai Fuk Road fronting KITEC is at grade and slip roads are provided connecting to / from Kwun Tong Bypass.

Traffic and Pedestrian Surveys

- 2.5 Traffic and pedestrian counts were conducted from 0700 – 1100 hours and 1600 – 2000 hours on Friday 24th March 2023. On the survey days, there were **no** “Exhibition or Convention Hall” and “Place of Entertainment” events in KITEC.

Manual Classified Counts

- 2.6 Manual classified counts were conducted at junctions as shown in Figure 2.1 in order to establish the peak hour traffic flows. The surveyed junctions include the following:
- J1 – Kai Cheung Road / Trademart Drive
 - J2 – Kai Cheung Road / Wang Kwong Road
 - J3 – Wang Kwong Road / Lam Hing Street
 - J4 – Wang Kwong Road / Wang Chin Street
 - J5 – Kai Cheung Road / Wang Chiu Road
 - J6 – Wang Chiu Road / Lam Hing Street
 - J7 – Wang Chiu Road / Sheung Yuet Road
 - J8 – Wang Chiu Road / Lam Fung Street
 - J9 – Sheung Yee Road / Wang Chiu Road
 - J10 – Shing Kai Road / Muk On Street / Kai Shing Street
 - J11 – Wang Chiu Road / Kai Lai Road / Kai Lok Street
 - J12 – Wang Kwong Road / Kai Wah Street
- 2.7 The traffic counts were classified by vehicle type to enable traffic flows in passenger car units (pcu) to be calculated. The vehicle classifications are presented in Table 2.1, and the layout of the surveyed junctions is shown in Figures 2.2 – 2.13.

TABLE 2.1 VEHICLE CLASSIFICATIONS OF TRAFFIC SURVEYS

Ref.	Vehicle Class	Abbreviation
1	Motorcycle	MC
2	Private Car	PC
3	Taxi	TAXI
4	Light Goods Vehicle	LGV
5	Medium Goods Vehicle	MGV
6	Heavy Goods Vehicle	HGV
7	Public Light Bus	PLB
8	Private Light Bus	PrLB
9	Non-franchised Bus	NFB
10	Single Deck Franchised Bus	FBSD
11	Double Deck Franchised Bus	FBDD

2.8 The AM and the PM peak hour traffic flows were found to occur at 0800 – 0900 and 1700 – 1800 hours respectively, and the peak hour traffic flows are illustrated in Figure 2.14.

Existing Junction and Link Operational Performance

2.9 The existing operational performance of the surveyed junctions was calculated based on the analysis method found in Volumes 2 and 4 of Transport Planning and Design Manual (“TPDM”). The analysis results are summarised in Table 2.2 and detailed calculations are found in Appendix A.

TABLE 2.2 EXISTING JUNCTION OPERATIONAL PERFORMANCE

Ref.	Junction	Type of Junction	Performance Indicator	AM Peak	PM Peak
J1	Kai Cheung Road / Trademart Drive	Priority	RFC	0.141	0.297
J2	Kai Cheung Road / Wang Kwong Road	Signal	RC	25%	44%
J3	Wang Kwong Road / Lam Hing Street	Signal	RC	81%	76%
J4	Wang Kwong Road / Wang Chin Street	Priority	RFC	0.204	0.199
J5	Kai Cheung Road / Wang Chiu Road	Signal	RC	48%	46%
J6	Wang Chiu Road / Lam Hing Street	Signal	RC	57%	93%
J7	Wang Chiu Road / Sheung Yuet Road	Signal	RC	35%	52%
J8	Wang Chiu Road / Lam Fung Street	Signal	RC	> 100%	> 100%
J9	Sheung Yee Road / Wang Chiu Road	Signal	RC	32%	39%
J10	Shing Kai Road / Muk On Street / Kai Shing Street	Signal	RC	58%	94%
J11	Wang Chiu Road / Kai Lai Road / Kai Lok Street	Signal	RC	54%	77%
J12	Wang Kwong Road / Kai Wah Street	Signal	RC	43%	59%

Note: RC – Reserve Capacity RFC – Ratio-of-Flow to Capacity

2.10 The above results indicate that the surveyed junctions currently operate with capacities during the AM and PM peak hours.

2.11 The existing link capacity for the local road network is assessed, and the link capacity analysis results are shown in Table 2.3.

TABLE 2.3 EXISTING LINK CAPACITY ASSESSMENT

Road Section ⁽¹⁾	Bound	Capacity (veh/hr)	Traffic Flows (veh/hr)		Volume to Capacity Ratio	
			AM Peak	PM Peak	AM Peak	PM Peak
Kai Cheung Road	Eastbound	3,348 ⁽²⁾	1,322	1,331	0.39	0.40
	Westbound	3,600	2,147	1,997	0.60	0.55
Wang Kwong Road	2-way	1,600	857	749	0.54	0.47
Wang Chiu Road	2-way	4,000	1,638	1,288	0.41	0.32
Sheung Yee Road	Eastbound	2,400	1,261	1,180	0.53	0.49
	Westbound	3,600	208	231	0.06	0.06
Trademart Drive	Northbound	1,023 ⁽²⁾	278	500	0.27	0.49
	Southbound	3,348 ⁽²⁾	306	419	0.09	0.13
Lam Hing Street	2-way	800	584	548	0.73	0.69
Sheung Yuet Road	Eastbound	2,200	195	181	0.09	0.08
	Westbound	2,200	222	391	0.10	0.18

Note: ⁽¹⁾ highest traffic flow along the surveyed road sections

⁽²⁾ with reduction factor of 7% for heavy vehicle percentage between 15 – 20%

2.12 Table 2.3 shows that the analysed road links currently operate with capacities during the AM and PM peak hours.

Level-of-Service of Pedestrian Facilities

2.13 To quantify the existing pedestrian flows, pedestrian counts were conducted during the weekday AM and PM peak periods at footpaths which are located in the vicinity of the subject site, and these include the following:

- F1 – Western footpath of Trademart Drive
- F2 – Eastern footpath of Trademart Drive
- F3 – Northern footpath of Lam Hing Street
- F4 – Southern footpath of Lam Hing Street
- F5 – Western footpath of Wang Chin Street
- F6 – Eastern footpath of Wang Chin Street

2.14 The level-of-service (LOS) of a pedestrian walkway is dependent on its width and number of pedestrians using the facility. Description of the LOS is obtained from Volume 6 of the TPDM, and is presented in Table 2.4.

TABLE 2.4 DESCRIPTION OF PEDESTRIAN WALKWAY LOS

LOS	Flow Rate (ped/min/m)	Description
A	≤ 16	Pedestrians basically move in desired paths without altering their movements in response to other pedestrians. Walking speeds are freely selected, and conflicts between pedestrians are unlikely.
B	16 – 23	Sufficient space is provided for pedestrians to freely select their walking speeds, to bypass other pedestrians and to avoid crossing conflicts with others. At this level, pedestrians begin to be aware of other pedestrians and to respond to their presence in the selection of walking paths.
C	23 – 33	Sufficient space is available to select normal walking speeds and to bypass other pedestrians primarily in unidirectional stream. Where reverse direction or crossing movement exist, minor conflicts will occur, and speed and volume will be somewhat lower.

TABLE 2.4 DESCRIPTION OF PEDESTRIAN WALKWAY LOS (CONT'D)

LOS	Flow Rate (ped/min/m)	Description
D	33 – 49	Freedom to select individual walking speeds and bypass other pedestrians is restricted. Where crossing or reverse-flow movements exist, the probability of conflicts is high and its avoidance requires changes of speeds and position. The LOS provides reasonable fluid flow; however considerable friction and interactions between pedestrians are likely to occur.
E	49 – 75	Virtually, all pedestrians would have their normal walking speeds restricted. At the lower range of this LOS, forward movement is possible only by shuffling. Space is insufficient to pass over slower pedestrians. Cross- and reverse-movement are possible only with extreme difficulties. Design volumes approach the limit of walking capacity with resulting stoppages and interruptions to flow.
F	> 75	Walking speeds are severely restricted. Forward progress is made only by shuffling. There are frequent and unavoidable conflicts with other pedestrians. Cross- and reverse-movements are virtually impossible. Flow is sporadic and unstable. Space is more characteristics of queued pedestrians than of moving pedestrian streams.

Source: Volume 6 Chapter 10 of the TPDM

2.15 The peak 15-minute pedestrian flows are illustrated in Figure 2.15, and the corresponding LOS assessment is presented in Table 2.5.

TABLE 2.5 EXISTING LEVEL-OF-SERVICE ASSESSMENT

Ref.	Footpath	Total Width	Effective Width ⁽¹⁾	Peak Period	2-way Peak Pedestrian Flows ⁽²⁾		LOS
					Flow (ped/15-min)	Rate (ped/min/m) ⁽³⁾	
F1	Western footpath of Trademart Drive	4.0	3.0	AM	62	1.4	A
				PM	103	2.3	A
F2	Eastern footpath of Trademart Drive	4.6	3.6	AM	33	0.6	A
				PM	18	0.3	A
F3	Northern footpath of Lam Hing Street	2.8	1.8	AM	18	0.7	A
				PM	37	1.4	A
F4	Southern footpath of Lam Hing Street	4.5	3.5	AM	54	1.0	A
				PM	41	0.8	A
F5	Western footpath of Wang Chin Street	3.0	2.0	AM	35	1.2	A
				PM	20	0.7	A
F6	Eastern footpath of Wang Chin Street	3.3	2.3	AM	39	1.1	A
				PM	31	0.9	A

Note: ⁽¹⁾ effective width = total width – (0.5m × 2)

⁽²⁾ highest pedestrian flows along the whole section of footpath

⁽³⁾ pedestrian flow rate = pedestrian flow ÷ 15 minutes ÷ effective width

2.16 The above results indicate that the surveyed footpaths currently operate with LOS A during the AM and PM peak hours. As stated in the TPDM, “LOS C is desirable for most design at streets with dominant ‘living’ pedestrian activities”. Hence, LOS A is considered as an acceptable level of service.

Traffic Generation of KITEC

- 2.17 For reference, the observed peak traffic generation of KITEC is presented in Table 2.6. In view that some offices and shops have been vacant since mid-2021, the survey records in 2018 are used and are presented in Table 2.6.

TABLE 2.6 OBSERVED TRAFFIC GENERATION OF KITEC

Item	Unit	AM Peak		PM Peak	
		IN	OUT	IN	OUT
Traffic Generation ⁽¹⁾	pcu/hour	351	240	385	327

Note: ⁽¹⁾ survey period from 0700 – 1100 and 1600 – 2000 hours on Thursday 15th March 2018. No “Exhibition or Convention Hall” and “Place of Entertainment” events were held on this day.

Public Transport Services and Surveys

- 2.18 Access to road-based and rail-based public transport services from the subject site is convenient. Numerous franchised bus and green minibus routes operate along Kai Fuk Road, Kai Cheung Road, Wang Kwong Road and Wang Chiu Road, which are within 500m or about 8 – 10 minutes’ walk away.
- 2.19 Details of the road-based public transport services operating close to the subject site are presented in Table 2.7 and Figure 2.16.

TABLE 2.7 PUBLIC TRANSPORT SERVICES OPERATING CLOSE TO THE SUBJECT SITE

Route No.	Routing	Frequency (min)

Note: KMB – Kowloon Motor Bus CTB – Citybus
GMB – Green Minibus

2.20 The occupancy of franchised bus and GMB services operating along Kai Fuk Road and Kai Cheung Road was surveyed, and the survey results are summarised in Table 2.8.

TABLE 2.8 PUBLIC TRANSPORT OCCUPANCY SURVEY RESULTS

Peak Hour	Road	Bound	Name of Bus Stop	Level of Public Transport Services (Approx.) (persons/hr)		
				Carrying Capacity ⁽¹⁾ [a]	No. of Passenger on board [b]	Surplus Capacity [a] – [b]
AM	Kai Fuk Road	NB	KITEC	6,800	3,541	3,259
		SB	KITEC	3,616	1,515	2,101
	Kai Cheung Road	EB	Kai Shing Street	1,440	585	855
		WB	Wang Chin Street	3,528	1,397	2,131
	Total				15,384	7,038
PM	Kai Fuk Road	NB	KITEC	3,768	1,276	2,492
		SB	KITEC	3,872	1,782	2,090
	Kai Cheung Road	EB	Kai Shing Street	1,080	630	450
		WB	Wang Chin Street	1,715	439	1,276
	Total				10,435	4,127

Note: EB – eastbound
NB – northbound

WB – westbound
SB – southbound

⁽¹⁾ The assumed carrying capacity of a single-deck bus and double-deck bus is 60 and 120 passengers respectively. The capacity of GMB is identified from survey.

2.21 Table 2.8 shows that the existing franchised bus and GMB services have surplus capacity of over 8,000 and 6,000 passengers during the AM and PM peak hours respectively.

Shuttle Bus Service

2.22 At present, free shuttle bus service is provided between KITEC and Telford Plaza, near MTR Kowloon Bay Station. The existing shuttle bus pick-up / drop-off point is located at the northern end of lay-by at Trademart Drive outside KITEC. The operating hours are from 0645 – 2359 hours daily with headway of around 5 – 15 minutes.

3.0 THE PROPOSED REDEVELOPMENT

Comparison of Development Parameters

3.1 A comparison of development parameters for (i) Approved Redevelopment and (ii) Proposed Redevelopment is presented in Table 3.1.

TABLE 3.1 COMPARISON OF DEVELOPMENT PARAMETERS

Item	Development Parameters				
	KITEC ⁽¹⁾	Approved Redevelopment [A] ⁽²⁾	Proposed Redevelopment [B]	Difference between [A] and [B]	
Site Area	22,280m ²	22,280m ²	22,280m ²	No change	
Plot Ratio	7.4	7.4	6.144 ⁽³⁾	- 1.256 (- 17%)	
Domestic GFA	0	0	85,867m ²	+ 85,867m ²	
No. of Flat	0	0	1,881 ⁽⁴⁾	+ 1,881 flats	
Non-domestic GFA	Office	63,934m ²	132,437m ²	27,130m ²	- 105,307m ² (- 80%)
	Eating Place and Shop and Services	80,268m ²	21,150m ²	8,845m ²	- 12,305m ² (- 58%)
	Exhibition or Convention Hall	11,312m ²	11,285m ²	11,285m ²	No change
	Place of Entertainment	9,325m ²	0	0	No change
	Social Welfare Facility	0	0	around 2,090m ² ⁽⁵⁾	+ 2,090m ²
	School (Kindergarten)	0	0	557m ² (6 classrooms)	+ 557m ²
	Total	164,839m ²	164,872m ²	49,907m ² ⁽⁶⁾	- 114,965m ² (- 70%)
Transport Facilities	Car Parking Space	763 ⁽⁷⁾	548 – 604	803	
	Motorcycle Parking Space	0	56 – 60	52	
	Loading / Unloading Bay	33	103 – 113	48	
	Taxi / Private Car Lay-by	9	7	4	
	Tour Bus Lay-by	0	0	2	
	Private Light Bus Parking Space	0	0	3	

- Note:
- ⁽¹⁾ based on 2018 A&A works
 - ⁽²⁾ extract from TPB No. A/K22/34 approved on 17th March 2023
 - ⁽³⁾ include domestic plot ratio of 3.854 and non-domestic plot ratio of 2.29
 - ⁽⁴⁾ average flat size = around 50m²
 - ⁽⁵⁾ include a Day Care Centre for the Elderly, a Residential Care Home for the Elderly and an Office Base of Social Work Service for Pre-primary Institutions (SWSPPI)
 - ⁽⁶⁾ exclude non-domestic GFA of 1,114m² for the Northern Footbridge Extension and Southern Footbridge, and GFA for the social welfare facilities to be exempted
 - ⁽⁷⁾ According to the existing Lease, the 763 car parking spaces in KITEC are ancillary and belong "to the owners or occupiers of the building or buildings ... and their bona fide guests, visitors or invitees ..."

3.2 Table 3.1 shows that compared with the Approved Redevelopment, there is an increase of 1,881 flats for the Proposed Redevelopment, but the **GFA for “Office” and “Eating Place and Shop and Services” is reduced by around 80% and 58% respectively.** There is no change to the GFA for “Exhibition or Convention Hall”.

3.3 It should be noted that “Place of Entertainment” will **not** be provided within the Proposed Redevelopment.

Internal Transport Facilities

3.4 The residential flats are grouped into unit size categories and details are found in Table 3.2.

TABLE 3.2 DETAILS OF RESIDENTIAL FLATS

Size of Residential Flat (GFA)	No. of Flat
≤ 40m ²	627
40 – 70m ²	1,254
Total No. of Flat	<u>1,881</u>

3.5 Subsequent to the approval of this s16 planning application, application will be made to modify the lease, and the internal transport facilities for the Proposed Redevelopment will be provided based on the recommendations of the Hong Kong Planning Standards and Guidelines (HKPSG). “Eating Place”, “Shop and Services” and “Exhibition or Convention Hall” are regarded as similar and are categorised as “Retail”. The calculation on the provision of internal transport facilities is found in Table 3.3.

TABLE 3.3 PROVISION OF INTERNAL TRANSPORT FACILITIES FOR THE PROPOSED REDEVELOPMENT

Type	Use	HKPSG Recommendations	Proposed Provision
Car Parking Space	Flat (for Residents)	Recommendation = $GPS \times R1 \times R2 \times R3$ GPS = 1 car space per 4 – 7 flats R1 = 0.5 for flat size ≤ 40m ² (723 flats) = 1.2 for flat size 40 – 70m ² (1,131 flats) R2 = 1 for development outside 500m of rail station R3 = 1 for domestic plot ratio 2 – 5 Min = $(627 \times 0.5 + 1254 \times 1.2) \div 7 \times 1 \times 1$ = 260 nos. Max = $(627 \times 0.5 + 1254 \times 1.2) \div 4 \times 1 \times 1$ = 455 nos.	455 nos.
	Flat (for Visitor)	5 visitor car parking spaces for developments with more than 75 units per block Max = 5×6 = 30 nos.	30 nos.

TABLE 3.3 PROVISION OF INTERNAL TRANSPORT FACILITIES FOR THE
PROPOSED REDEVELOPMENT (CONT'D)

Type	Use	HKPSG Recommendations	Proposed Provision
Car Parking Space	Office	1 space per 150 – 200m ² GFA	181 nos.
		Min = $27130 \div 200$ = 136 nos. Max = $27130 \div 150$ = 181 nos.

	Min = $11285 \div 1200$ = 10 nos. Max = $11285 \div 800$ = 15 nos.		
Total		Min = 6 + 10 + 8 + 10 = 34 nos. Max = 6 + 14 + 12 + 15 = 47 nos.	47 nos. (22 HGV + 25 LGV)

TABLE 3.3 PROVISION OF INTERNAL TRANSPORT FACILITIES FOR THE PROPOSED REDEVELOPMENT (CONT'D)

Type	Use	HKPSG Recommendations	Proposed Provision
Taxi / Private Car Lay-by	Office	1 lay-by for every 20,000m ² of GFA Max = $27130 \div 20000$ = 2 nos.	2 nos.
	School (Kindergarten)	1 lay-by for every 5 – 8 classrooms Min = $6 \div 8$ = 1 no. Max = $6 \div 5$ = 2 nos.	2 nos.
	Total	Min = 2 + 1 = 3 nos. Max = 2 + 2 = 4 nos.	4 nos.
Others ⁽²⁾	School (Kindergarten)	Minimum 2 lay-bys for school bus [Dimensions: 12m(L) × 3.5m(W) × 3.8m(H)]	<u>2</u> nos.
	Social Welfare Facility	1 shared-use loading / unloading bay for ambulance / goods vehicle / private light bus [Dimensions: 11m(L) × 3.5m(W) × 4.7m(H)]	<u>1</u> HGV
		3 private light bus parking spaces, including: • 2 spaces for Day Care Centre for the Elderly • 1 space for Residential Care Home for Elderly [Dimensions: 8m(L) × 3m(W) × 3.3m(H)]	3 PrLB

Note: ⁽¹⁾ According to Chapter 8 of HKPSG, 6 car parking spaces for persons with disabilities shall be provided for number of car parking spaces over 450

⁽²⁾ based on the operational requirements of Social Welfare Department (SWD)

⁽³⁾ Goods vehicle provision is divided into 65% LGV and 35% HGV for "Office", "Eating Place and Shop and Services" and "Exhibition or Convention Hall"

3.6 Table 3.3 shows that the internal transport facilities provided for the Proposed Redevelopment **comply with the maximum recommendations of the HKPSG.**

3.7 The internal transport facilities for social welfare facilities are provided to meet the operational requirements of SWD. As shown in Appendix B, SWD have "no objection in principle from service perspective for the applicant's proposed development of 60-place RCHE and 30-place DE on conditions that the RCHE and DE including the associated parking spaces and loading and unloading bay are running on privately-financing mode ...".

Parking Provision for "Exhibition or Convention Hall"

3.8 To understand the occupancy of the existing KITEC car park, occupancy data were obtained for large-scale events held in 2023 in KITEC for the uses categorised under "Exhibition or Convention Hall" but without events within the uses categorised under "Place of Entertainment". Details of these events are presented in Table 3.4.

TABLE 3.4 DETAILS OF "EXHIBITION OR CONVENTION HALL" EVENTS

Date	Large-scale Event	Time (hours)	Type of Event	No. of Participants (Approx.)
Weekday				
19/09/2023 (Tuesday)	23 rd SISTERS BeautyPro Trade Fair 第 23 屆姊妹專業美容展	1000 – 1759	Expo	5,000
20/09/2023 (Wednesday)	23 rd SISTERS BeautyPro Trade Fair 第 23 屆姊妹專業美容展	1000 – 1759	Expo	5,000
21/09/2023 (Thursday)	23 rd SISTERS BeautyPro Trade Fair 第 23 屆姊妹專業美容展	1000 – 1759	Expo	5,000
	Seminar	Day-time	Seminar	1,000
27/10/2023 (Friday)	HK Taiwan Higher Education Exhibition 2023 年香港臺灣高等教育展	1100 – 1859	Expo	2,000
	Meeting and Seminar	Day-time	Seminar	3,000
02/11/2023 (Thursday)	NotTooBig Mega Baby Expo NotTooBig 優質母嬰用品展	1200 – 1959	Expo	5,000
Weekend				
22/04/2023 (Saturday)	41 st HK Wedding Showcase 2023 第 41 屆婚展會	1200 – 1959	Expo	20,000
23/04/2023 (Sunday)	41 st HK Wedding Showcase 2023 第 41 屆婚展會	1200 – 1959	Expo	30,000
24/06/2023 (Saturday)	HK Illustration and Creative Show 5 香港插畫及文創展 5	1200 – 1959	Expo	5,000
23/09/2023 (Saturday)	42 nd HK Wedding Showcase 2023 第 42 屆婚展會	1200 – 1959	Expo	20,000
24/09/2023 (Sunday)	42 nd HK Wedding Showcase 2023 第 42 屆婚展會	1200 – 1959	Expo	20,000
25/11/2023 (Saturday)	HK Illustration and Creative Show 7 香港插畫及文創展 7	1200 – 1959	Expo	5,000

- 3.9 To ascertain the parking demand associated to the "Exhibition or Convention Hall" events, the average weekday and weekend car park occupancies for the event dates in Table 3.4 are compared to days without any event in KITEC. The comparison is found in Table 3.5.

TABLE 3.5 AVERAGE OCCUPANCY OF KITEC CAR PARK

Time Period (hours)	Average KITEC Car Park Occupancy				Parking Demand Associated to "Exhibition or Convention Hall" [a] – [b]
	On the day with "Exhibition or Convention Hall" Event ⁽¹⁾		On the day without any Event ⁽²⁾		
	Vehicle [a]	Percentage ⁽³⁾	Vehicle [b]	Percentage ⁽³⁾	
Weekday					
0800 – 0900	208	27%	204	27%	4
0900 – 1000	312	41%	272	36%	40
1000 – 1100	359	47%	314	41%	45
1100 – 1200	394	52%	340	45%	54
1200 – 1300	401	53%	345	45%	56
1300 – 1400	416	55%	351	46%	65
1400 – 1500	423	55%	370	48%	53
1500 – 1600	416	55%	367	48%	49
1600 – 1700	409	54%	367	48%	42
1700 – 1800	352	46%	312	41%	40
1800 – 1900	271	36%	233	31%	38
1900 – 2000	229	30%	176	23%	53
2000 – 2100	203	27%	157	21%	46
2100 – 2200	164	21%	146	19%	18
Maximum					<u>65</u>
Weekend					
0800 – 0900	144	19%	135	18%	9
0900 – 1000	179	23%	174	23%	5
1000 – 1100	213	28%	210	28%	3
1100 – 1200	259	34%	247	32%	12
1200 – 1300	333	44%	314	41%	19
1300 – 1400	391	51%	368	48%	23
1400 – 1500	448	59%	382	50%	66
1500 – 1600	474	62%	406	53%	68
1600 – 1700	468	61%	402	53%	66
1700 – 1800	415	54%	363	48%	52
1800 – 1900	346	45%	317	42%	29
1900 – 2000	263	34%	240	31%	23
2000 – 2100	201	26%	193	25%	8
2100 – 2200	173	23%	165	22%	8
Maximum					<u>68</u>

Note: ⁽¹⁾ refer to Table 3.4 for survey dates with "Exhibition or Convention Hall" event

⁽²⁾ survey dates without any event as follows:

weekday – 19/06/2023 (Monday), 06/07/2023 (Thursday) and 24/10/2023 (Tuesday)

weekend – 15/04/2023 (Saturday), 18/06/2023 (Saturday) and 02/07/2023 (Sunday)

⁽³⁾ capacity of KITEC car park = 763 car parking spaces

3.10 Table 3.5 shows the maximum weekday and weekend parking demand associated to the "Exhibition or Convention Hall" events is **65 and 68 car parking spaces** respectively.

3.11 The provision of 76 car parking spaces for "Exhibition or Convention Hall" in the Proposed Redevelopment is considered **adequate** due to the following reasons:

- The GFA of “*Exhibition or Convention Hall*” in the Proposed Redevelopment, i.e. 11,285m², is similar compared to that in the existing KITEC, i.e. 11,312m². Based on the car park occupancy study, the provision of 76 car parking spaces for “*Exhibition or Convention Hall*” is **sufficient to accommodate the maximum weekday and weekend parking demand** of 65 and 68 car parking spaces.
- According to the existing Lease, car parking space for “*Exhibition or Convention Hall*” shall be provided “*at the rate of one space for every 300 square metres or part thereof of gross floor area ... for non-industrial purpose*”, and this rate was also adopted for the Approved Redevelopment. For the Proposed Redevelopment, 1 car parking space is provided per 150m² of “*Exhibition or Convention Hall*” GFA, which **double the provision compared with the existing Lease**.
- Similar to the existing KITEC which has mixed uses, some visitors attending the events are expected to also dine or shop within the Proposed Redevelopment. Hence, the ancillary car parking spaces for “*Eating Place and Shop and Services*” could serve those visitors.

Internal Transport Layout

- 3.12 The run-in / out of the Proposed Redevelopment is provided at Trademart Drive near the southern site boundary, and is **close to the existing run-in / out for KITEC**. The proposed run-in / out and layout plans with the internal transport facilities, i.e. ground, 1st, basement 1st and 2nd, are presented in Figures 3.1 – 3.4.
- 3.13 According to Volume 2 of TPDM, “*the width of run-ins should be kept to the minimum compatible with satisfactory operation of vehicles using the run-in. The minimum width should be such that a vehicle can enter the run in from the near side lane without encroachment onto an adjacent lane*”. As shown in Figures SP/GF/101 – 102, the 8m run-in / out is required so that the 11m HGV and 12m tour bus could enter / leave the Proposed Redevelopment **without encroaching into the road kerb / adjacent traffic lane**.
- 3.14 At present, KITEC has a basement goods vehicle loading / unloading area and a 4-storey basement car park. In view that internal pick-up / drop-off area is not available in the existing KITEC, the pick-up / drop-off activities, including car, taxi and coach / shuttle bus are conducted at Trademart Drive.
- 3.15 To minimise the pick-up / drop-off activities along Trademart Drive, internal pick-up / drop-off area is provided for the Proposed Redevelopment which is on G/F as shown in Figure 3.2.
- 3.16 To minimise the likelihood of vehicle tailback when entering the basement car park, the car park entry gates will be positioned as far away as possible from the run-in / out. Detailed design of internal transport layout including the internal pick-up / drop-off area will be submitted in the GBP stage.

Improvement to Pedestrian Connectivity and Accessibility

- 3.17 The Kai Tak OZP shows that the existing footbridge across Kai Fuk Road (the existing “Kai Fuk Road footbridge”) will connect to the future commercial sites located at the South Apron Area and to the future waterfront promenade via an elevated walkway. To enhance the connectivity and accessibility between Kowloon Bay Business Area and the Kai Tak Development (KTD), the Owner of KITEC has proposed to construct two footbridges, namely the Northern Footbridge Extension and Southern Footbridge.
- 3.18 The Applicant will provide internal walkway(s) to link up the Northern Footbridge Extension (via the Kai Cheung Road footbridge) and the Southern Footbridge with the footpaths at Trademart Drive and / or Kai Cheung Road in accordance to the Lease. The provision of the Northern Footbridge Extension and Southern Footbridge, will form part of the comprehensive elevated pedestrian network for the purpose to enhance the connectivity and accessibility between South Apron Area of KTD, MTR Kai Tak Station and the Kowloon Bay Business Area. Public can access the Northern Footbridge Extension and Southern Footbridge free of charge.
- 3.19 The general layout of the Northern Footbridge Extension and Southern Footbridge is shown in Figure 3.5, and details are described below:
- (I) Northern Footbridge Extension**
- 3.20 The Proposed Northern Footbridge is an **extension of the existing Kai Cheung Road footbridge**, which currently link KITEC and Electrical and Mechanical Services Department (EMSD) Headquarters. From the Kai Cheung Road footbridge, the Northern Footbridge Extension runs along the western side of EMSD Headquarters, and across Shing Kai Road and terminates at the Kai Tak River Bank, some 500m from MTR Kai Tak Station.
- 3.21 Barrier-free facility will be provided at the Kai Tak River Bank end of the Proposed Northern Footbridge. Within the Proposed Redevelopment, barrier-free and 24-hour access will be provided connecting the Kai Cheung Road footbridge to the street level.
- (II) Southern Footbridge**
- 3.22 The eastern landing of Kai Fuk Road footbridge is located adjacent to KITEC, and the western landing will connect to the future commercial sites located at the South Apron Area and to the future waterfront promenade.
- 3.23 The Southern Footbridge will conveniently and directly connect the Proposed Redevelopment with the Kai Fuk Road footbridge. Within the Proposed Redevelopment, barrier-free and 24-hour access will be provided connecting the Proposed Southern Footbridge to the street level.
- 3.24 Detailed design of these two footbridges is on-going and will be dealt with under separate application procedures. After the s16 planning application has been approved, and during the detailed design stage, the design of the internal pedestrian routings between the footbridges and street level will be carried out.

Planned Cautionary Crossing at Trademart Drive

- 3.25 The Applicant is willing to implement the planned cautionary crossing, as per the design drawing from Energizing Kowloon East Office (EKEO) found in Appendix C, at Trademart Drive as part of the KITEC redevelopment project.
- 3.26 However, it should be noted that the redevelopment project is subject to the approval of this s16 planning application and subsequently, the submission of design drawings for approval by relevant government departments. Hence, at this stage, the Developer is unable to provide the construction programme for the planned cautionary crossing.

Discontinuation of Free Shuttle Bus Service

- 3.27 Upon redevelopment of KITEC, the free shuttle bus service will be discontinued.

Swept Path Analysis

- 3.28 The CAD-based swept path analysis programme, *Autodesk Vehicle Tracking*, was used to check the ease of manoeuvring of vehicles, and are found to have no problems. The swept path analysis drawings are found in the Appendix D.

4.0 TRAFFIC IMPACT

Design Year

- 4.1 The Proposed Redevelopment is expected to be completed in 2028, thus, the design years adopted for the capacity analysis are 2028 and 2031.

Traffic and Pedestrian Growth

- 4.2 In order to produce the traffic forecast for year 2031, reference is made to the population and employment data found in the latest “Territorial Population and Employment Data Matrix” (“TPEDM”) published by Planning Department and is presented in Table 4.1.

TABLE 4.1 TPEDM DATA FOR KWUN TONG

Year	Population	Employment	Total
2019	693,900	395,350	1,089,250
2031	741,300	408,250	1,149,550
Annual Growth Rate			<u>0.45%</u>

- 4.3 Table 4.1 shows that the annual growth rate for population and employment is 0.45% from 2019 – 2031. To err on the high side, the traffic and pedestrian growth rate of 0.5% per annum is adopted to produce the traffic forecast for year 2031.

Traffic Forecast

- 4.4 The BDTM from “Quotation No. TD 311/2019 – Base District Traffic Models for the Urban Area – 2020 Update” (the “BDTM Study”) obtained from Transport Department (TD) was adopted to produce the traffic forecast. The Proposed Redevelopment is located within the K2 Base District Traffic Model (BDTM), and the BDTM traffic forecast for year 2031 is used.

- 4.5 To produce the traffic forecast for the design years, traffic flows are estimated with reference to the following:
- i. 2031 peak hour traffic models from the BDTM;
 - ii. planned developments located in the vicinity; and
 - iii. traffic generation of the Proposed Redevelopment.

Comparison of Traffic Generation

- 4.6 To estimate traffic generation of KITEC, Approved Development and Proposed Redevelopment, trip generation rates found in Volume 1 of the TPDM are adopted. “Eating Place”, “Shop and Services”, “Exhibition or Convention Hall” and “Place of Entertainment” are regarded similar as “Retail”, hence, the trip generation rates for “Retail” are adopted for these uses. The TPDM has no trip generation rates for social welfare facilities and kindergarten, therefore, reference is made to “Community Facilities” and “Kindergarten (Private)” found in the Data Record (DR) No. 439, and the BDTM Study Final Report respectively, both which are published by TD. The extracts of DR 439 and the BDTM Study Final Report are attached in Appendix E.

4.7 As mentioned in Table 2.7 and Figure 2.16, the subject site is served by no less than five bus and minibus routes located within 500m walk away. Based on Volume 1 of TPDM, the subject site has Accessibility Level A.

4.8 The adopted trip generation rates are presented in Table 4.2, and the calculated traffic generation in Table 4.3.

TABLE 4.2 TRIP GENERATION RATES

Use	Unit	Trip Generation Rates			
		AM Peak		PM Peak	
		IN	OUT	IN	OUT
Residential (average flat size 60m ²) ^{(1) (2)}	pcu/hour/flat	0.0425	0.0718	0.0370	0.0286
Office ⁽²⁾	pcu/hour/100m ²	0.2452	0.1703	0.1175	0.1573
Eating Place / Shop and Services / Exhibition or Convention Hall ⁽²⁾	pcu/hour/100m ²	0.2434	0.2296	0.3563	0.3100
Social Welfare Facility ⁽³⁾	pcu/hour/100m ²	0.2350	0.2350	0.1150	0.1150
School (Kindergarten) ⁽⁴⁾	pcu/hour/class	6.9375	6.9375	5.4375	5.4375

Note: ⁽¹⁾ Accessibility Level = A, i.e. well served by public transport systems with railway station / light rail transit station / bus terminus or with no less than five bus / mini-bus routes, within 500m of the development site
⁽²⁾ extract from Volume 1 of TPDM
⁽³⁾ extract from DR 439
⁽⁴⁾ extract from Final Report of the BDTM Study

TABLE 4.3 COMPARISON OF TRAFFIC GENERATION

Use	Quantity	Traffic Generation (pcu/hr)					
		AM Peak			PM Peak		
		IN	OUT	2-way	IN	OUT	2-way
KITEC⁽¹⁾							
Office	63,934m ²	157	109	266	76	101	177
Eating Place / Shop and Services	80,268m ²	196	185	381	286	249	535
Exhibition or Convention Hall	11,312m ²	28	26	54	41	36	77
Place of Entertainment	9,325m ²	23	22	45	34	29	63
Total [a]		404	342	746	437	415	852
Approved Redevelopment⁽²⁾							
Office	132,437m ²	325	226	551	156	209	365
Eating Place / Shop and Services	21,150m ²	52	49	101	76	66	142
Exhibition or Convention Hall	11,285m ²	28	26	54	41	35	76
Total [b]		405	301	706	273	310	583
Proposed Redevelopment							
Flat	1,881 flats	80	136	216	70	54	124
Office	27,130m ²	67	47	114	32	43	75
Eating Place / Shop and Services	8,846m ²	22	21	43	32	28	60
Exhibition or Convention Hall	11,285m ²	28	26	54	41	35	76
Social Welfare Facility	2,090m ²	5	5	10	3	3	6
School (Kindergarten)	6 classes	42	42	84	33	33	66
Total [c]		244	277	521	211	196	407
Difference [c] – [b]		-161 (-40%)	-24 (-8%)	-185 (-26%)	-62 (-23%)	-114 (-37%)	-176 (-30%)
Difference [c] – [a]		-160 (-40%)	-65 (-19%)	-225 (-30%)	-226 (-52%)	-219 (-53%)	-445 (-52%)

Note: ⁽¹⁾ based on 2018 A&A works
⁽²⁾ extract from TPB No. A/K22/34 approved on 17th March 2023

- 4.9 Table 4.3 shows that the Proposed Redevelopment is expected to generate **185 and 176 pcu (2-way) less than** the Approved Redevelopment during the AM and PM peak hours, or equivalent to **26% and 30% less traffic**.
- 4.10 Compared with the existing KITEC, the Proposed Redevelopment is expected to generate **less traffic**, i.e. 225 and 445 pcu/hour (2-way), or equivalent to reduction of **30% and 52% traffic** during the AM and PM peak hours.
- 4.11 From traffic engineering point of view, **the Proposed Redevelopment is a better-off scheme** compared to both the Approved Redevelopment and existing KITEC.

Planned Developments

- 4.12 According to the “BDTM Study”, KTD and the strategic road network, e.g. Central Kowloon Route and Trunk Road T2, have been included in the 2031 BDTM.
- 4.13 Reference is made to the Town Planning Board (TPB) Paper No. 10236 “Further Consideration of Review Study of Kai Tak Development and Proposed Amendments to the Approved Kai Tak Outline Zoning Plan No. S/K22/4” published in 2017, MPC Paper No. 9/21: “Proposed Amendments to the Approved Kai Tak Outline Zoning Plan No. S/K22/6” published in 2021 and TPB Paper No. 10860 “... on Proposed Amendments to the Draft Kai Tak Outline Zoning Plan No. S/K22/7 ...” published in 2022. It is noted that the development intensity in KTD has changed and details are found in Appendix F. To reflect the change in traffic generation, the BDTM is updated accordingly.
- 4.14 Apart from the KTD, the development parameters of other major planned developments found in the vicinity of the subject site are also summarised in Table 4.4.

TABLE 4.4 DETAILS OF MAJOR PLANNED DEVELOPMENTS

Ref.	Location	Use	Development Parameters (Approx.)	Planned Completion Year
A	Public Housing Development at Wang Chiu Road	Public Housing	around 4,070 flats and around 1,850m ² GFA retail with community facilities	2025
B	20 Kai Cheung Road	Commercial	office GFA of around 131,421m ² and retail GFA of around 5,840m ²	2025
C	NKIL 5890 at 13 Sheung Yuet Road	Office	office GFA of around 24,423m ²	2023 ⁽¹⁾
D	Development at Kowloon Bay Action Area	Commercial	total GFA of around 500,000m ²	from 2028
E	Public Housing Development at Yip On Factory Estate	Public Housing	around 2,200 flats with associated welfare facilities	2029/30
F	7 Wang Tai Road	Office	office GFA of around 38,500m ²	2026
G	New Acute Hospital at Kai Tak Development Area	Hospital	around 2,400 beds	2026

TABLE 4.4 DETAILS OF MAJOR PLANNED DEVELOPMENTS (CONT'D)

Ref.	Location	Use	Development Parameters (Approx.)	Planned Completion Year
H	1 – 5 Kai Hing Road	Residential	around 1,782 flats and retail GFA of around 600m ²	2025
I	7 Kai Hing Road	Office	office GFA of around 43,440m ² and retail GFA of around 5,500m ²	2026
J	14 Wang Tai Road	Office	office GFA of around 20,334m ²	2024

Note: ⁽¹⁾ redevelopment is yet to complete and construction works were not observed on-site. To err on the high side, traffic generation remains included in the traffic forecast.

4.15 The major planned developments listed in Table 4.4 have been included in the traffic forecast.

2028 and 2031 Junction and Link Capacity Analysis

4.16 The 2028 and 2031 junction capacity analyses are conducted for the following scenarios:

- with KITEC;
- with Approved Redevelopment; and
- with Proposed Redevelopment.

4.17 The 2028 and 2031 peak hour traffic flows for the 3 scenarios are shown in Figures 4.1 – 4.6 respectively.

4.18 The design year junction capacity analysis for the cases with the Approved Redevelopment and with the Proposed Redevelopment are summarised in Table 4.5, and detailed calculations are found in Appendix A.

Note: RC – Reserve Capacity RFC – Ratio-of-Flow to Capacity
(¹) refer to Table 2.2 for the type of junction and performance indicator

(2) planned junction improvement by others is summarised below:

Ref.	Figure	Project Proponent	Improvement under Project	Planned Completion Year
J2	4.7	Housing Department	Public Housing Development at Yip On Factory Estate	2029/30
J3	4.8	Applicant of TPB No. A/K13/318	20 Kai Cheung Road	2025
J5	4.9	EKEO	Kowloon Bay Action Area	from 2028
J6	4.10	EKEO	Kowloon Bay Action Area	from 2028
J7	4.11	EKEO	Kowloon Bay Action Area	from 2028
J8	4.12	EKEO	Kowloon Bay Business Area Pedestrian Environment Improvement	see * below
J9	4.13	EKEO	Kowloon Bay Action Area	from 2028

* subject to final design of the proposed Elevated Walkway System in Kowloon Bay

4.19 Table 4.5 shows that in 2028 and 2031, the analysed junctions have higher reserve capacities for the case with the Proposed Redevelopment, compared to the case with the Approved Redevelopment and existing KITEC. This is due to the Proposed Redevelopment traffic generation being **27 – 29% less** compared to the Approved Redevelopment during the AM and PM peak hours respectively.

4.20 The 2028 and 2031 link capacity for the local road network is also assessed and the results are shown in Table 4.6.

NB – northbound

SB – southbound

⁽¹⁾ highest traffic flow along the surveyed road sections

⁽²⁾ V/C Ratio – Volume to Capacity Ratio

⁽³⁾ refer to Table 2.4 for the capacity of each road

- 4.21 The above results indicate that the analysed junctions and road links are expected to operate with sufficient capacity during the peak hours in 2028 and 2031. The junctions analysed have sufficient capacity to accommodate the (i) expected traffic growth, and (ii) traffic generated by the Approved Redevelopment and the Proposed Redevelopment.

Pedestrian Generation

- 4.22 The pedestrian generation of the Proposed Redevelopment is estimated based on pedestrian generation surveys conducted at similar developments **located in Kowloon**. As mentioned in Paragraph 4.6, "Eating Place", "Shop and Services", "Exhibition or Convention Hall" and "Place of Entertainment" are regarded similar as "Retail". Details of the surveyed developments are given in Table 4.7.

TABLE 4.7 DETAILS OF SURVEYED DEVELOPMENTS

Use	Development	Location	Acc. Level ⁽¹⁾	Development Parameters (Approx.)
Residential	Grand Waterfront	38 San Ma Tau Street, To Kwa Wan	A	1,782 flats (average flat size = 51m ²)
Office	Millennium City Phase II	376 – 378 Kwun Tong Road, Kwun Tong	A	office GFA of around 24,800m ²
Retail	The ONE	100 Nathan Road, Tsim Sha Tsui	A	retail GFA of around 37,500m ²
Social Welfare Facility	On Tai Estate Ancillary Facilities Block	23 On Sau Road, Kwun Tong	A	around 8,000m ² welfare facilities for elderly and disabled persons
Kindergarten	Kowloon City Baptist Church Kindergarten	206 Argyle Street Kowloon City	A	6 classrooms

Note: ⁽¹⁾ Accessibility (Acc.) Level = A, i.e. well served by public transport systems with railway station / light rail transit station / bus terminus or with no less than five bus / mini-bus routes, within 500m of the development site

4.23 Table 4.7 shows that the surveyed developments are comparable with the Proposed Redevelopment (including 1,881 flats, 27,130m² office, 20,131m² “Eating Place / Shop and Services” and “Exhibition or Convention Hall” with supporting social welfare facilities and kindergarten) in terms of location, use and accessibility to public transport services. The adopted pedestrian generation rates are presented in Table 4.8.

TABLE 4.8 PEDESTRIAN GENERATION RATES

Use	Unit	Pedestrian Generation Rates			
		AM Peak		PM Peak	
		IN	OUT	IN	OUT
Residential	ped/15-min/flat	0.0202	0.0875	0.0853	0.0348
Office	ped/15-min/100m ²	0.6250	0.1935	0.1613	0.3669
Eating Place / Shop and Services / Exhibition or Convention Hall	ped/15-min/100m ²	0.2347	0.1147	1.0348	0.8641
Social Welfare Facility	ped/15-min/100m ²	0.1111	0.0889	0.0222	0.3000
School (Kindergarten)	ped/15-min/class	6.6667	5.1667	1.3333	9.8333

4.24 The pedestrian generation rates presented in Table 4.8 are used to calculate the pedestrian generated by Proposed Redevelopment, and the calculated pedestrian generation is presented in Table 4.9.

TABLE 4.9 COMPARISON OF PEDESTRIAN GENERATION

Use	Quantity	Pedestrian Generation (ped/15-min)					
		AM Peak			PM Peak		
		IN	OUT	2-way	IN	OUT	2-way

School (Kindergarten)	6 classes	41	32	73	8	59	67
Total [c]		300	276	576	423	407	830
Difference [c] – [b]		-605 (-67%)	-19 (-6%)	-624 (-52%)	-127 (-23%)	-360 (-47%)	-487 (-37%)
Difference [c] – [a]		-338 (-53%)	35 (15%)	-303 (-34%)	-727 (-63%)	-701 (-63%)	-1,428 (-63%)

Note: ⁽¹⁾ based on 2018 A&A works

⁽²⁾ extract from TPB No. A/K22/34 approved on 17th March 2023

4.25 Table 4.9 shows that the Proposed Redevelopment is expected to generate **624 and 487 ped/15-min (2-way) less than** the Approved Redevelopment during the AM and PM peak periods, or equivalent to **52% and 37% less pedestrians**.

4.26 Compared with the existing KITEC, the Proposed Redevelopment is expected to generate **less pedestrians**, i.e. 303 and 1,428 ped/15-min (2-way), or equivalent to reduction of **34% and 63% pedestrians** during the AM and PM peak hours.

2028 and 2031 Level-of-Service Assessment

4.27 The design year pedestrian flows are derived with reference to the following:

- observed peak 15-minute pedestrian flows in year 2023;
- annual growth rate from 2023 to the design years, i.e. 0.5%; and
- pedestrian generation for 3 scenarios, i.e. with (i) KITEC; (ii) Approved Redevelopment; and (iii) Proposed Redevelopment.

4.28 The 2028 and 2031 peak 15-minute pedestrian flows for the 3 scenarios are shown in Figures 4.14 – 4.19 respectively, and the corresponding LOS assessment is presented in Table 4.10.

TABLE 4.10 DESIGN YEAR LEVEL-OF-SERVICE ASSESSMENT

		PM	34	1.0	A	34	1.0	A	34	1.0	A

Note: ⁽¹⁾ highest pedestrian flows along the whole section of walkway

4.29 The above results indicate that the analysed footpaths are expected to operate with LOS A to C during the peak hours in 2028 and 2031. The results show that the footpaths analysed has sufficient capacity to accommodate the (i) expected pedestrian growth; and (ii) change in pedestrian flows associated to the Proposed Redevelopment.

Modal Split of Transport Demand

4.30 The projected public transport demand of the Proposed Redevelopment by various transport modes is estimated with reference to the “2021 Population Census” published by Census and Statistics Department (C&SD). The estimated modal split is presented in Table 4.11.

TABLE 4.11 MODAL SPLIT OF PUBLIC TRANSPORT DEMAND FOR KWUN TONG

Public Transport Mode		No. of Persons			Percentage
		Working Population	Students	Total	
Railway		99,580	31,832	131,412	41%
Road-based Public Transport Service	Bus / Minibus	87,194	32,514	119,708	37%
	Company Bus / School Bus / Shuttle Service	7,378	11,699	19,077	6%
	Taxi	1,844	519	2,363	1%
On foot only		24,659	23,665	48,324	15%
Total		220,655	100,229	320,884	100%

Source: 2021 Population Census

- 4.31 Table 4.11 shows that around 41% of daily travellers use railway and 44% use the road-based public transport service, e.g. franchised bus, minibus, taxi, etc. The remaining 15% of population travel to their work places / schools on foot only.

Impact to Public Transport Services

- 4.32 Based on the findings in Table 4.9, the maximum number of pedestrians generated by the Proposed Redevelopment is found to be 3,320 ped/hr (two-way) [Calculation: 830×4] during the PM peak hour. With the modal split estimated in Table 4.11, the public transport demand of the Proposed Redevelopment is projected in Table 4.12.

TABLE 4.12 PUBLIC TRANSPORT DEMAND OF THE PROPOSED REDEVELOPMENT

Public Transport Mode	Percentage ⁽¹⁾	No. of 2-way Pedestrian Trips (ped/hr)
Railway	41%	1,361
Road-based Public Transport Service	44%	1,461
On foot only	15%	498
Total	100%	3,320

Note: ⁽¹⁾ from Table 4.11

- 4.33 To be conservative, it is assumed that all rail passengers will travel to the MTR Kowloon Bay or Kai Tak Stations by interchanging with bus / minibus services, taking into consideration their distances to the Proposed Redevelopment. Hence, the maximum road-based passenger demand is found to be 2,822 ped/hr [Calculation: $1361 + 1461$].
- 4.34 As mentioned in Paragraph 2.22, the existing franchised bus and GMB services have surplus capacity of over 8,000 and 6,000 passengers during the AM and PM peak hours respectively. Hence, the surplus capacity would be **capable to absorb the additional road-based passenger demand** associated to the Proposed Redevelopment.

4.35 With reference to Serial No. TLB168 of “Examination of Estimates of Expenditure 2023 – 24” for Legislative Council Finance Committee Meetings, the maximum carrying capacities of MTR Kwun Tong Line and Tuen Ma Line per direction are 71,400 and 70,000 persons per hour (pph) respectively.

4.36 From the findings in Table 4.12, the maximum rail-based passenger demand is found to be 1,361 ped/hr. This is equivalent to only **0.48%** of the maximum carrying capacity of the MTR Kwun Tong Line and Tuen Ma Line [= 1361 ÷ (70,000 + 71400) ÷ 2], which is **insignificant**.

Enhancement of Feeder Services to / from MTR Stations

4.37 Serial No. TLB168 of “Examination of Estimates of Expenditure 2023 – 24” also advises that the current patronages of MTR Kwun Tong Line and Tuen Ma Line are 34,500 and 34,200 pph respectively. By adopting the patronage split for the Proposed Redevelopment, say, 50% of rail-based passengers will use MTR Kowloon Bay Station and the remaining 50% will use MTR Kai Tak Station.

4.38 Apart from the existing road-based public transport services, new franchised bus routes or re-routing of existing bus routes are proposed as feeder services to connect the Proposed Redevelopment and MTR Kowloon Bay or Kai Tak Stations. The analysis of proposed feeder services is presented in Table 4.13.

TABLE 4.13 ANALYSIS FOR FEEDER SERVICE TO / FROM MTR STATIONS

Item		Calculation	AM Peak		PM Peak	
			IN ⁽¹⁾	OUT ⁽²⁾	IN ⁽¹⁾	OUT ⁽²⁾
Pedestrian Generation	ped/15-min ⁽³⁾	[a]	300	276	423	407
	ped/hr	[b] = [a] × 4	1,200	1,104	1,692	1,628
Total Rail-based Passenger Demand (pph)		[c] = [b] × 41% ⁽⁴⁾	492	453	694	667
MTR Kowloon Bay Station	Passenger Demand (pph)	[d ₁] = [c] × 50% ⁽⁵⁾	246	227	347	334
	Carrying Capacity of Double-Deck Bus (per) ⁽⁶⁾	[e ₁]	102	102	102	102
	Number of Trips per hour	[f ₁] = [d ₁] ÷ [e ₁]	3	3	4	4
	Headway (min)	[g ₁] = 60 ÷ [f ₁]	20	20	15	15
MTR Kai Tak Station	Passenger Demand (pph)	[d ₂] = [c] × 50% ⁽⁵⁾	246	226	347	333
	Carrying Capacity of Double-Decked Bus (per) ⁽⁶⁾	[e ₂]	102	102	102	102
	Number of Trips per hour	[f ₂] = [d ₂] ÷ [e ₂]	3	3	4	4
	Headway (min)	[g ₂] = 60 ÷ [f ₂]	20	20	15	15

- Note: ⁽¹⁾ from MTR stations to the Proposed Redevelopment
⁽²⁾ from the Proposed Redevelopment to MTR stations
⁽³⁾ from Table 4.9
⁽⁴⁾ from Table 4.11
⁽⁵⁾ from Paragraph 4.37
⁽⁶⁾ The assumed carrying capacity of a double-deck bus is 120 passengers. To be conservative, a loading of 102 passengers per double-deck bus, i.e. 85% full, is adopted.

4.39 Table 4.13 shows that 3 and 4 bus trips (one-way) are required connecting the Proposed Redevelopment and MTR Kowloon Bay Station during the AM and PM peak hours respectively. Similarly, 3 and 4 trips (one-way) are required for MTR Kai Tak Station respectively.

4.40 Figure 3.1 shows that a 120m lay-by is currently provided at Trademart Drive fronting the Proposed Redevelopment. Hence, a section of this lay-by could be designated as bus stop / terminus for provision of feeder services.

4.41 Alternatively, some existing urban local bus routes operating close to KITEC may include a new enroute bus stop at Trademart Drive to strengthen the connection between the Proposed Redevelopment and MTR Kowloon Bay or Kai Tak Stations. The indicative enhancement proposal is presented in Table 4.14.

TABLE 4.14 INDICATIVE ENHANCEMENT PROPOSAL TO EXISTING BUS SERVICES

Route No.	Routing	Frequency (min)	Possible Service Enhancement
KMB 5D	Telford Gardens – Hung Hom (circular)	13 – 30	add enroute bus stop at Trademart Drive for journeys to Telford Gardens
KMB 5M	MTR Kowloon Bay Station (circular) – Kai Tak (Tak Long Estate)	15 – 30	add enroute bus stop at Trademart Drive for journeys from MTR Kowloon Bay Station to Kai Tak (Tak Long Estate)
CTB 22M	Kai Tak Cruise Terminal – To Kwa Wan	20 – 30	add enroute bus stop at Trademart Drive for both bounds

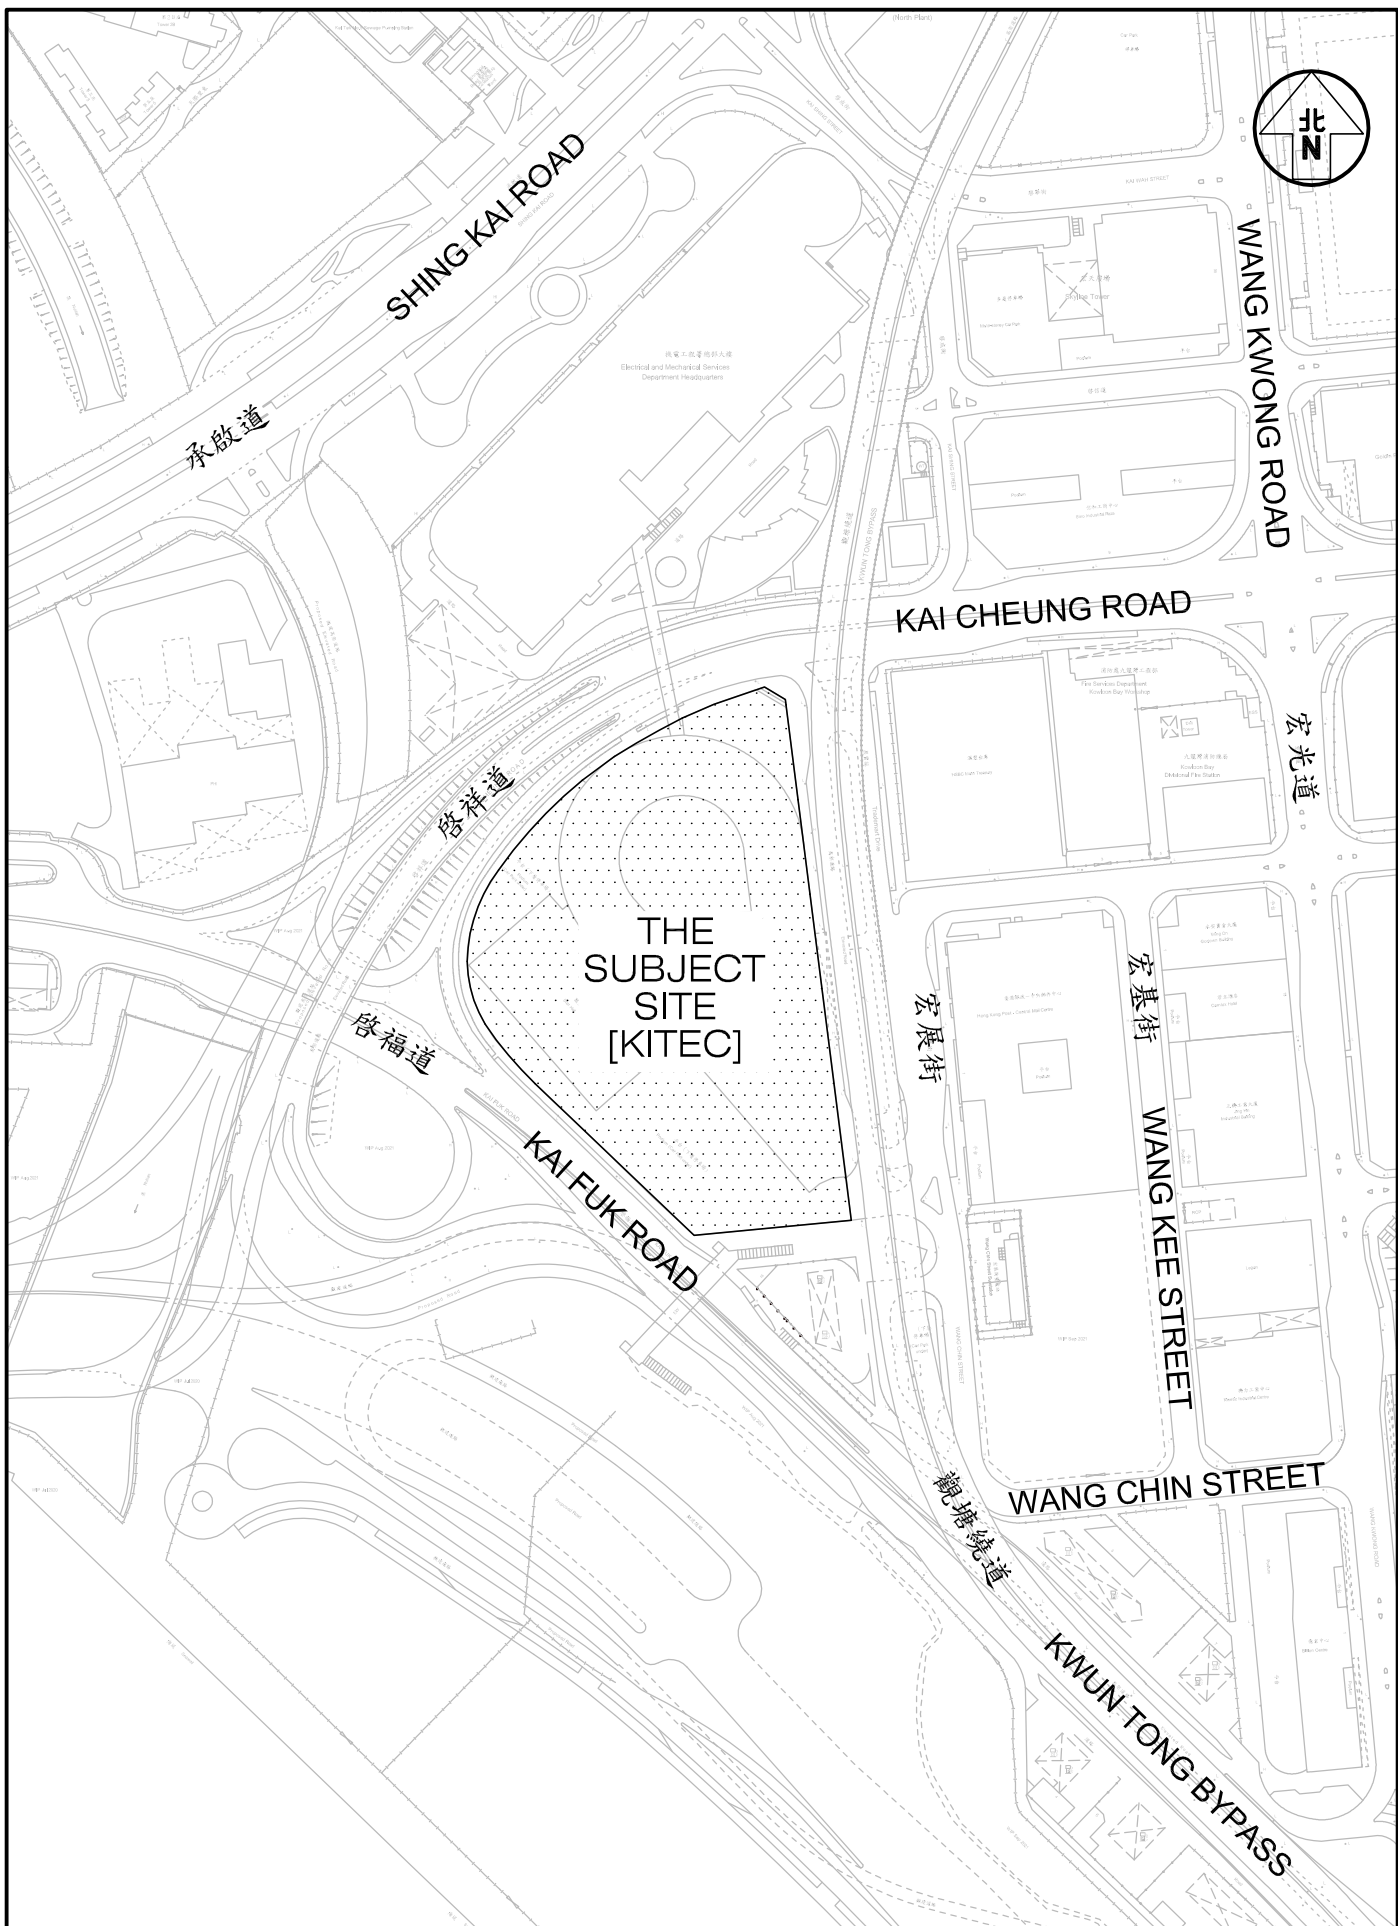

Note: KMB – Kowloon Motor Bus CTB – CityBus

4.42 It is noted that the public transport service network in Kowloon East, including the Kowloon Bay Business Area, is being strengthened progressively to cater for the rapid development and transformation. Hence, the provision of feeder services for the Proposed Redevelopment shall be further reviewed by Transport Department together with the regional public transport service network to suit the operational need in future.

5.0 SUMMARY

- 5.1 The subject site is located at New Kowloon Inland Lot No. 6032 at 1 Trademart Drive in Kowloon Bay. This s16 planning application is for the redevelopment of KITEC with 1,881 flats, 27,130m² "Office" GFA, 8,845m² "Eating Place" and "Shop and Services" GFA, 11,285m² "Exhibition or Convention Hall" GFA with supporting "Social Welfare Facility" and "School (Kindergarten)".
- 5.2 The internal transport facilities provided for the Proposed Development comply with the **maximum recommendations of HKPSG** while the internal transport facilities for welfare facilities are provided to meet the operational requirements of the SWD.
- 5.3 Manual classified counts were conducted at key junctions, which are located in the vicinity in order to establish the existing traffic flows during the AM and PM peak hours. The 2028 and 2031 design traffic flows are derived with reference to the latest BDTM and have taken into account the planned developments in the vicinity of the subject site.
- 5.4 The 2028 and 2031 junction and link capacity analyses were undertaken for 3 scenarios with: (i) the existing KITEC; (ii) the Approved Redevelopment (i.e. TPB No. A/K22/34); and (iii) the Proposed Redevelopment. The junctions and road links analysed have sufficient capacity to accommodate the expected traffic volume in 2031 and traffic generated by the Proposed Redevelopment.
- 5.5 The analysed junctions have higher reserve capacities for the case with the Proposed Redevelopment, compared to the case with the Approved Redevelopment, because the Proposed Redevelopment traffic generation is 26% and 30% less compared to the Approved Redevelopment during the AM and PM peak hours respectively.
- 5.6 Pedestrian counts were conducted at the footpaths in the vicinity of the subject site in order to estimate the future pedestrian flows during the AM and PM peak periods. The LOS assessment demonstrates that the analysed footpaths have sufficient capacity to accommodate the estimated pedestrian flows in 2031.
- 5.7 The surplus capacity of the existing franchised bus and GMB services would be capable to absorb the additional road-based passenger demand from the Proposed Redevelopment, and the provision of feeder services shall be further reviewed by Transport Department together with the regional public transport service network to suit the operational need in future. In addition, the Proposed Redevelopment would generate insignificant rail-based passenger demand to the MTR Kwun Tong Line and Tuen Ma Line during the AM and PM peak hours.
- 5.8 The TIA concluded that the Proposed Redevelopment will result in **no** adverse traffic impact to the surrounding road network. From traffic engineering grounds, the Proposed Redevelopment is acceptable.

**Appendix A –
Junction Capacity Analysis**

Priority Junction Analysis

Junction: J1 - Kai Cheung Road / Trademart Drive
 Design Year: 2023 Job Number: J7266 Date: 18 January 2024
 Scenario: existing condition R2 / P.1-1

The predictive equations of capacity of movement are:

$$Q-BA = D[627 + 14W-CR - Y(0.364q-AC + 0.144q-AB + 0.229q-CA + 0.52q-CB)]$$

$$Q-BC = E[745 - Y(0.364q-AC + 0.144q-AB)]$$

$$Q-CB = F[745 - 0.364Y(q-AC + q-AB)]$$

The geometric parameters represented by D, E, F are:

$$D = [1 + 0.094(w-BA - 3.65)][1 + 0.0009(V-rBA - 120)][1 + 0.0006(V-IBA - 150)]$$

$$E = [1 + 0.094(w-BC - 3.65)][1 + 0.0009(V-rBC - 120)]$$

$$F = [1 + 0.094(w-CB - 3.65)][1 + 0.0009(V-rCB - 120)]$$

where $Y = 1 - 0.0345W$

q-AB, etc = the design flow of movement AB, etc

W = major road width

W-CR = central reserve width

w-BA, etc = lane width to vehicle

v-rBA, etc = visibility to the right for waiting vehicles in stream BA, etc

v-IBA, etc = visibility to the left for waiting vehicles in stream BA, etc

Geometry :	Input	Input	Input	Calculated
	W	11.50	V-rBA	0
	W-CR	0.00	V-IBA	0
			V-rBC	100
			V-rCB	0
			w-BA	0.00
			w-BC	5.00
			w-CB	0.00
			D	0.5332
			E	1.1066
			F	0.5860
			Y	0.6033

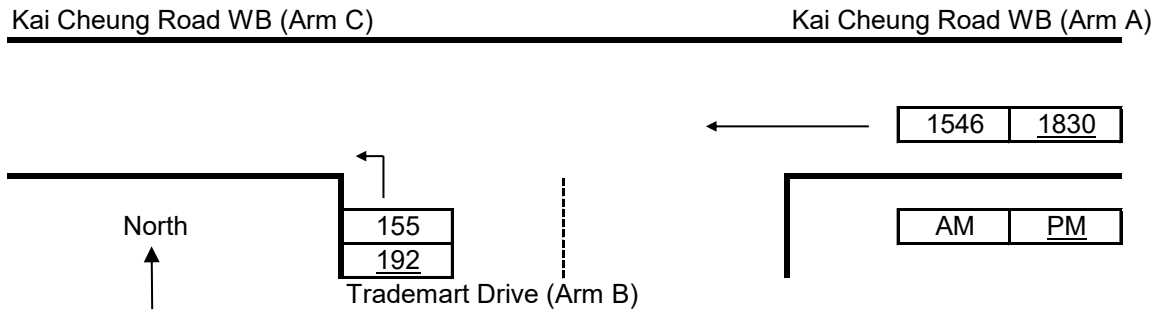

Analysis :

Traffic Flows, pcu/hr	AM	PM	Capacity, pcu/hr	AM	PM
q-CA	0	0	Q-BA	194	173
q-CB	0	0	Q-BC	532	489

Priority Junction Analysis

Junction: J1 - Kai Cheung Road / Trademart Drive
 Design Year: 2031 Job Number: J7266 Date: 18 January 2024
 Scenario: with Approved Redevelopment R2 / P.1-6

The predictive equations of capacity of movement are:

$$Q\text{-BA} = D[627 + 14W\text{-CR} - Y(0.364q\text{-AC} + 0.144q\text{-AB} + 0.229q\text{-CA} + 0.52q\text{-CB})]$$

$$Q\text{-BC} = E[745 - Y(0.364q\text{-AC} + 0.144q\text{-AB})]$$

$$Q\text{-CB} = F[745 - 0.364Y(q\text{-AC} + q\text{-AB})]$$

The geometric parameters represented by D, E, F are:

$$D = [1 + 0.094(w\text{-BA} - 3.65)][1 + 0.0009(V\text{-rBA} - 120)][1 + 0.0006(V\text{-IBA} - 150)]$$

$$E = [1 + 0.094(w\text{-BC} - 3.65)][1 + 0.0009(V\text{-rBC} - 120)]$$

$$F = [1 + 0.094(w\text{-CB} - 3.65)][1 + 0.0009(V\text{-rCB} - 120)]$$

where $Y = 1 - 0.0345W$

q-AB, etc = the design flow of movement AB, etc

W = major road width

W-CR = central reserve width

w-BA, etc = lane width to vehicle

v-rBA, etc = visibility to the right for waiting vehicles in stream BA, etc

v-IBA, etc = visibility to the left for waiting vehicles in stream BA, etc

**Appendix B – Comment from
SWD on TPB No. A/K22/37**

I refer to your preceding email and memo seeking our comments on the proposed social welfare facilities involved in the captioned planning application for the redevelopment of Kowloon Bay International Trade and Exhibition Centre at 1 Trademart Drive, Kowloon Bay. Comments from the Social Welfare Department (SWD) are appended in the ensuing paragraphs.

Our comments on the applicant's pre-submission were given to the applicant vide email of 27.2.2024. That is, SWD does not support the applicant's proposal of providing 30-place Residential Care Home for the Elderly (RCHE) and 20-place Day Care Centre for the Elderly (DE) which were proposed to be handed over to the Government as Government Accommodation upon completion of construction. The applicant has subsequently provided response-to-comment (R-to-C) in April 2024 advising that the capacity of the RCHE and DE, which would be privately operated by the applicant, would be expanded to 60 places and 30 places respectively. The applicant has also confirmed in the R-to-C that Office Base of Social Work Service for Pre-primary Institutions (SWSPPI) would be incorporated into the development for handing over to SWD, but 30-place Supported Hostel for Mentally Handicapped Persons would not be considered.

We note that the aforesaid R-to-C has been reflected in the applicant's formal submission of the captioned planning application. Our comments on the applicant's pre-submission

are also valid for the formal submission. If the applicant proposes to hand over the 60-place RCHE and 30-place DE to SWD upon completion of construction, the proposal is not agreeable from service point of view. Nevertheless, to enable market diversity in the provision of residential / day care services for addressing the demand for quality service, we have no objection in principle from service perspective for the applicant's proposed development of 60-place RCHE and 30-place DE on conditions that -

- (i) the RCHE and DE including the associated parking spaces and loading and unloading bay are running on privately-financing mode with no financial implication, both capital and recurrent, on the Government; and
- (ii) the design and construction of the RCHE and DE shall comply with the height restriction, all relevant ordinances, regulations, licensing and statutory requirements. Specifically, the RCHE shall comply with the (i) Residential Care Homes (Elderly Persons) Ordinance (Cap. 459) and its subsidiary legislation; and (ii) the latest version of the Code of Practice for Residential Care Homes (Elderly Persons), etc. No part of an RCHE shall be situated at a height more than 24m above the ground floor, measuring vertically from the ground of the building to the floor of the premises at which the RCHE is to be situated.

As regards the provision of bare-shell premises for the SWSPPI which will be designed and constructed by the applicant and handed over to the Government upon completion, the applicant should confirm that -

- (i) the proposed GFA of 165 square metres is able to meet the design and construction of SWSPPI in accordance with the approved Schedule of Accommodation and other requirements as requested by SWD. According to the approved Schedule of Accommodation, the net operational floor area of SWSPPI is 95 square metres while the internal floor area is about 124 square metres;
- (ii) the SWSPPI does not have any parking space and loading and unloading bay; and
- (iii) no part of the welfare premises of SWSPPI is situated at a height more than 24 metres above the ground level, measuring vertically from the ground of the building to the highest floor level of the premises at which the welfare premises is to be situated.

**Appendix C –
Planned Cautionary Crossing
at Trademart Drive
(Extract of Email from EKEO)**

From: chriswong@devb.gov.hk
Sent: Wednesday, 13 April, 2022 17:47
To: CKM Asia

Subject: Re: Fw: TMD1: Redevelopment of KITEC at 1 Trademart Drive, Kowloon Bay - s16 planning application (TPB No. S/K22/34)

Dear Mr. TANG,

I refer to your email on 13 April 2022.

Regarding the proposed cautionary crossing at Wang Chin Street, please refer to Item 8 (page 10 of the pdf file) at the following link:

https://www.districtcouncils.gov.hk/kt/doc/2020_2023/tc/committee_meetings_doc/TDTC/21292/TDTC_12_2021_R.pdf

We understand that TD has requested the applicant to supplement with a TIA report. Please liaise with TD in this regard.

 Regards,
Chris WONG
Works Consolidation Manager (1)

----- Forwarded by EKEO Enquiry/DEVB/HKSARG on 13/04/2022 15:15 -----

From: "CKM Asia" <mail@ckmasia.com.hk>
To: <ekeo@devb.gov.hk>
Date: 13/04/2022 15:09
Subject: TMD1: Redevelopment of KITEC at 1 Trademart Drive, Kowloon Bay - s16 planning application (TPB No. S/K22/34)

Attn: DevB (EKEO) – Mr Kelvin Chan [Place Making Mgr (Planning) 1]

Dear Mr Chan,

We refer to the s16 planning application (TPB No. S/K22/34) for the captioned site.

CKM Asia Limited

According to the attached comment from Transport Department (TD), *“(5) It is noted that EKEO has proposed to add a cautionary crossing at Trademart Drive. Please ask the applicant to seek EKEO’s views and consider their request”*.

As discussed yesterday, we would appreciate if you could provide more technical details (such as location, dimensions, etc) of the proposed cautionary crossing for information and to facilitate our response to TD comment.

Thank you for your attention.

Regards,

H.C. Tang

*non-domestic PR for proposed residential sites

Bundle	Site	Site Area ^[b]	Current				Proposed				
			Zoning	Max. PR	Max. SC	Max. BH	Zoning	Max. Dom. PR ^[c]	Max. Non-dom. PR ^[c]	Max. SC	Max. BH
1	2A2	6,270m ²	“CDA(4)” [commercial]	6.6	65%	90mPD	“CDA(4)” [residential]	6.5 ^[d]	1.0 ^[d]	65%	125mPD ^[e]
	2A3	5,968m ²	“C(3)”	6.5	65%	90mPD	“R(A)6”	6.5	1.0	65%	125mPD
2	2A4 ^[a]	6,555m ²	“C(3)”	6.5	65%	80mPD	“R(A)5”	6.5	1.5	65%	125mPD
	2A5(B) ^[a]	3,374m ²	“C(3)”	6.5	65%	80mPD					115mPD
	2A10 ^[a]	6,100m ²	“C(3)”	6.5	65%	80mPD					100mPD

Notes:

^[a] Sites 2A4, 2A5(B) and 2A10 to be under the same “R(A)5” zoning are proposed to be indicated as a linked single site on the OZP for the purpose of determination of the maximum PR. Individual sites should each be subject to the proposed maximum SC of 65%.

^[b] Site areas are subject to detailed survey.

^[c] Floor spaces for (i) railway facilities in the “R(A)5” zone (which is to cater for the existing railway facilities in Site 2A10); and (ii) government, institutional or community (GIC) facilities in the “CDA(4)”, “R(A)5” and “R(A)6” zones, as required by the Government, are proposed to be disregarded from PR calculation.

^[d] A maximum PR of 7.5 is proposed to be stipulated in the Notes of the OZP for the “CDA(4)” zone. The recommended maximum domestic PR of 6.5 and maximum non-domestic PR of 1.0 are to be stipulated under planning brief and land sale conditions.

^[e] The retail belt area of the “CDA(4)” zone abutting the LTSBPC (**Plan 9a**) is subject to a maximum BH of 2 storeys in accordance with the Notes of the OZP.

4.3 The proposed increase in the maximum BHs for the five individual sites from 80 to 90mPD to 100 to 125mPD is for ensuring that the residential use at the sites, which is subject to a lower permissible SC under the Building (Planning) Regulations than non-domestic use, could achieve the proposed maximum domestic PR of 6.5. Such an increase in BHs is still in keeping with the general stepped BH profile of the locality which is descending progressively from the northeast to the southwest^[8] (**Plan 9a**), and is in line with the broad urban design framework of KTD on creating a dynamic skyline.

4.4 To accord with the policy initiative of providing more welfare facilities in private development sites, a certain amount of gross floor area (GFA) (equivalent to not less than 5% of the proposed domestic GFA of the site in general) for provision of government/social welfare facilities mainly based on the wish-list of the Social Welfare Department (SWD) has been incorporated in the notional schemes of the reviewed sites and assumed to be disregarded from PR/GFA calculation for testing in the Review Study, such that the maximum permissible PR for the sites would not be compromised. For the two bundled sites, upon consulting SWD, the following welfare facilities have been reserved at the sites for addressing the needs of the local and the community on the services:

⁸ The highest BH of 135mPD in the locality of Area 2 relates to the proposed public housing development at Site 2B1, with the BHs of the adjacent residential sites descending progressively from the northeast to the southwest to the levels of 125mPD, 115mPD and 100mPD.

“R(B)7” with maximum PRs of 5.5/6.1/7.0, and have all been sold for private residential developments. To the south and further southeast of the three reviewed sites are the existing Kai Tak Cruise Terminal (KTCT) and a site zoned “OU” annotated “Tourism Related Uses to include Commercial, Hotel and Entertainment” (“OU(TRU)”) intended for the development of the proposed Tourism Node (TN). While Sites 4B5 and 4C4 are currently vacant, Site 4C5 is occupied as a temporary depot for franchised buses.

Rezoning Proposals

4.8 The Review Study recommended the three reviewed sites to be rezoned from commercial to residential use subject to maximum domestic PRs of 5.7/6.6/7.0 (average domestic PR of 6.5), maximum non-domestic PRs of 0.3/0.5, maximum SC of 40% and maximum BH of 95/108mPD (same as now) for production of about 3,000 private housing units. Similar to the two bundled sites at the former north apron area, GFAs for GIC/social welfare facilities (equivalent to not less than 5% of the proposed domestic GFA of the site in general) have also been reserved at these sites and are proposed to be disregarded from PR calculation. Site 4B5 is proposed to be rezoned from “C(4)” to “R(B)8” (**Item F on Plan 6**), Site 4C4 from “C(7)” to “R(B)9” (**Item G on Plan 6**) and Site 4C5 from “C(5)” to “R(B)10” (**Item H on Plan 6**). The proposed zonings and development restrictions for the sites are summarised as follows:

Site	Site Area ^[a]	Current				Proposed			
		Zoning	Max. PR	Max. SC	Max. BH	Zoning	Max. PR ^[b]	Max. SC	Max. BH
4B5	13,953m ²	“C(4)”	6.5	80%	108mPD	“R(B)8”	7.5 ^[c]	40%	108mPD
4C4	10,692m ²	“C(7)”	7.5	80%	95mPD	“R(B)9”	6.9 ^[d]	40%	95mPD
4C5	9,480m ²	“C(5)”	6.0	80%	95mPD	“R(B)10”	5.7 ^[e]	40%	95mPD

Notes:

- ^[a] Site areas are subject to detailed survey.
- ^[b] Floor spaces for GIC facilities in the “R(B)8”, “R(B)9” and “R(B)10” zones, as required by the Government, are proposed to be disregarded from PR calculation.
- ^[c] The proposed maximum PR of 7.5 comprises a maximum domestic PR of 7.0 and a maximum non-domestic PR of 0.5 which are to be stipulated under land sale conditions.
- ^[d] The proposed maximum PR of 6.9 comprises a maximum domestic PR of 6.6 and a maximum non-domestic PR of 0.3 which are to be stipulated under land sale conditions.
- ^[e] The proposed maximum PR of 5.7 is for residential use only.

4.9 To maintain the feature of an undulating and varied BH profile in the former runway area, with the tallest band of developments in the middle portion and BHs of the developments stepping down on the two sides towards the Metro Park and the runway tip (**Plan 12d**), the BHs of Sites 4B5, 4C4 and 4C5 are proposed to remain unchanged. In proportion to the BH and in consideration of specific site constraints (including the proximity of Site 4C5 to KTCT), the PRs for the three sites have been carefully designed^[10] to achieve an average maximum domestic PR of 6.5.

¹⁰ Site 4C5 is proposed with a smaller maximum domestic PR of 5.7 as half of its south-western site boundary is abutting the existing structure of KTCT and its site configuration is relatively elongated. Site 4B5, which has a more regular site configuration and is subject to a higher maximum BH among the three reviewed sites, is proposed with a larger maximum domestic PR of 7.0.

**SCHEDULE OF PROPOSED AMENDMENTS TO
THE DRAFT KAI TAK OUTLINE ZONING PLAN NO. S/K22/7
MADE BY THE TOWN PLANNING BOARD
UNDER THE TOWN PLANNING ORDINANCE (Chapter 131)**

I. Amendments to Matters shown on the Plan

- Item A – Rezoning of a site on the south-western side of Shing Fung Road and the north-western side of Shing King Street from “Residential (Group B)9” (“R(B)9”) to “Commercial (7)” (“C(7)”).
- Item B – Rezoning of a site on the south-western side of Shing Fung Road and the south-eastern side of Shing King Street from “R(B)10” to “C(5)”.

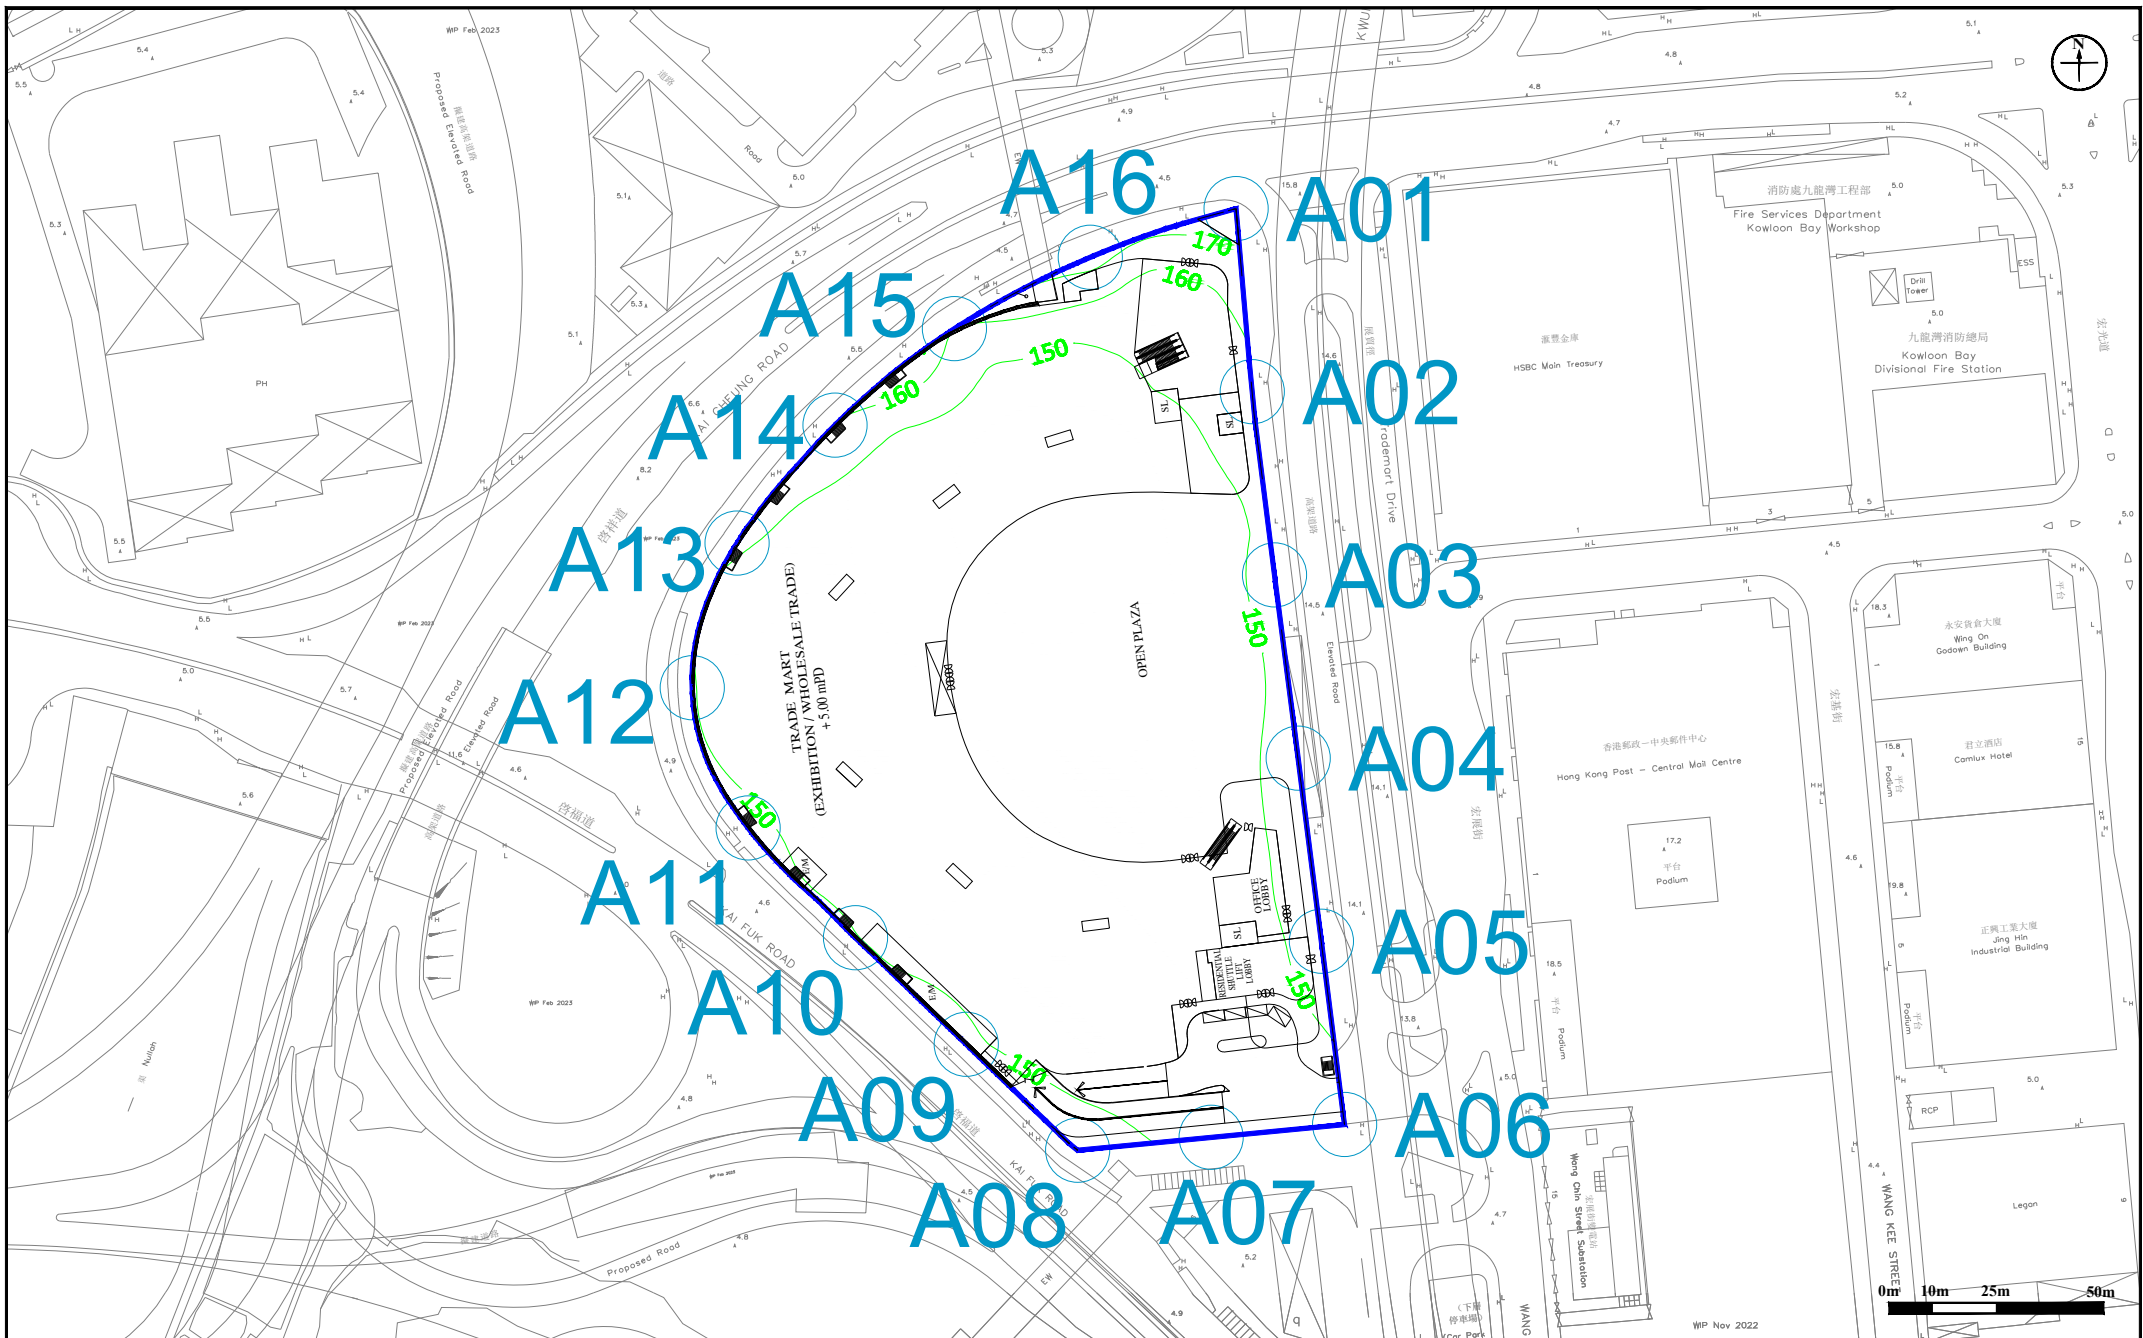

II. Amendments to the Notes of the Plan

- (a) Revision to the Remarks for the “C” zone to incorporate development restrictions for the “C(5)” and “C(7)” sub-areas.
- (b) Revisions to the Schedule of Uses and the Remarks for the “R(B)” zone to delete all the provisions related to the “R(B)9” and “R(B)10” sub-areas.

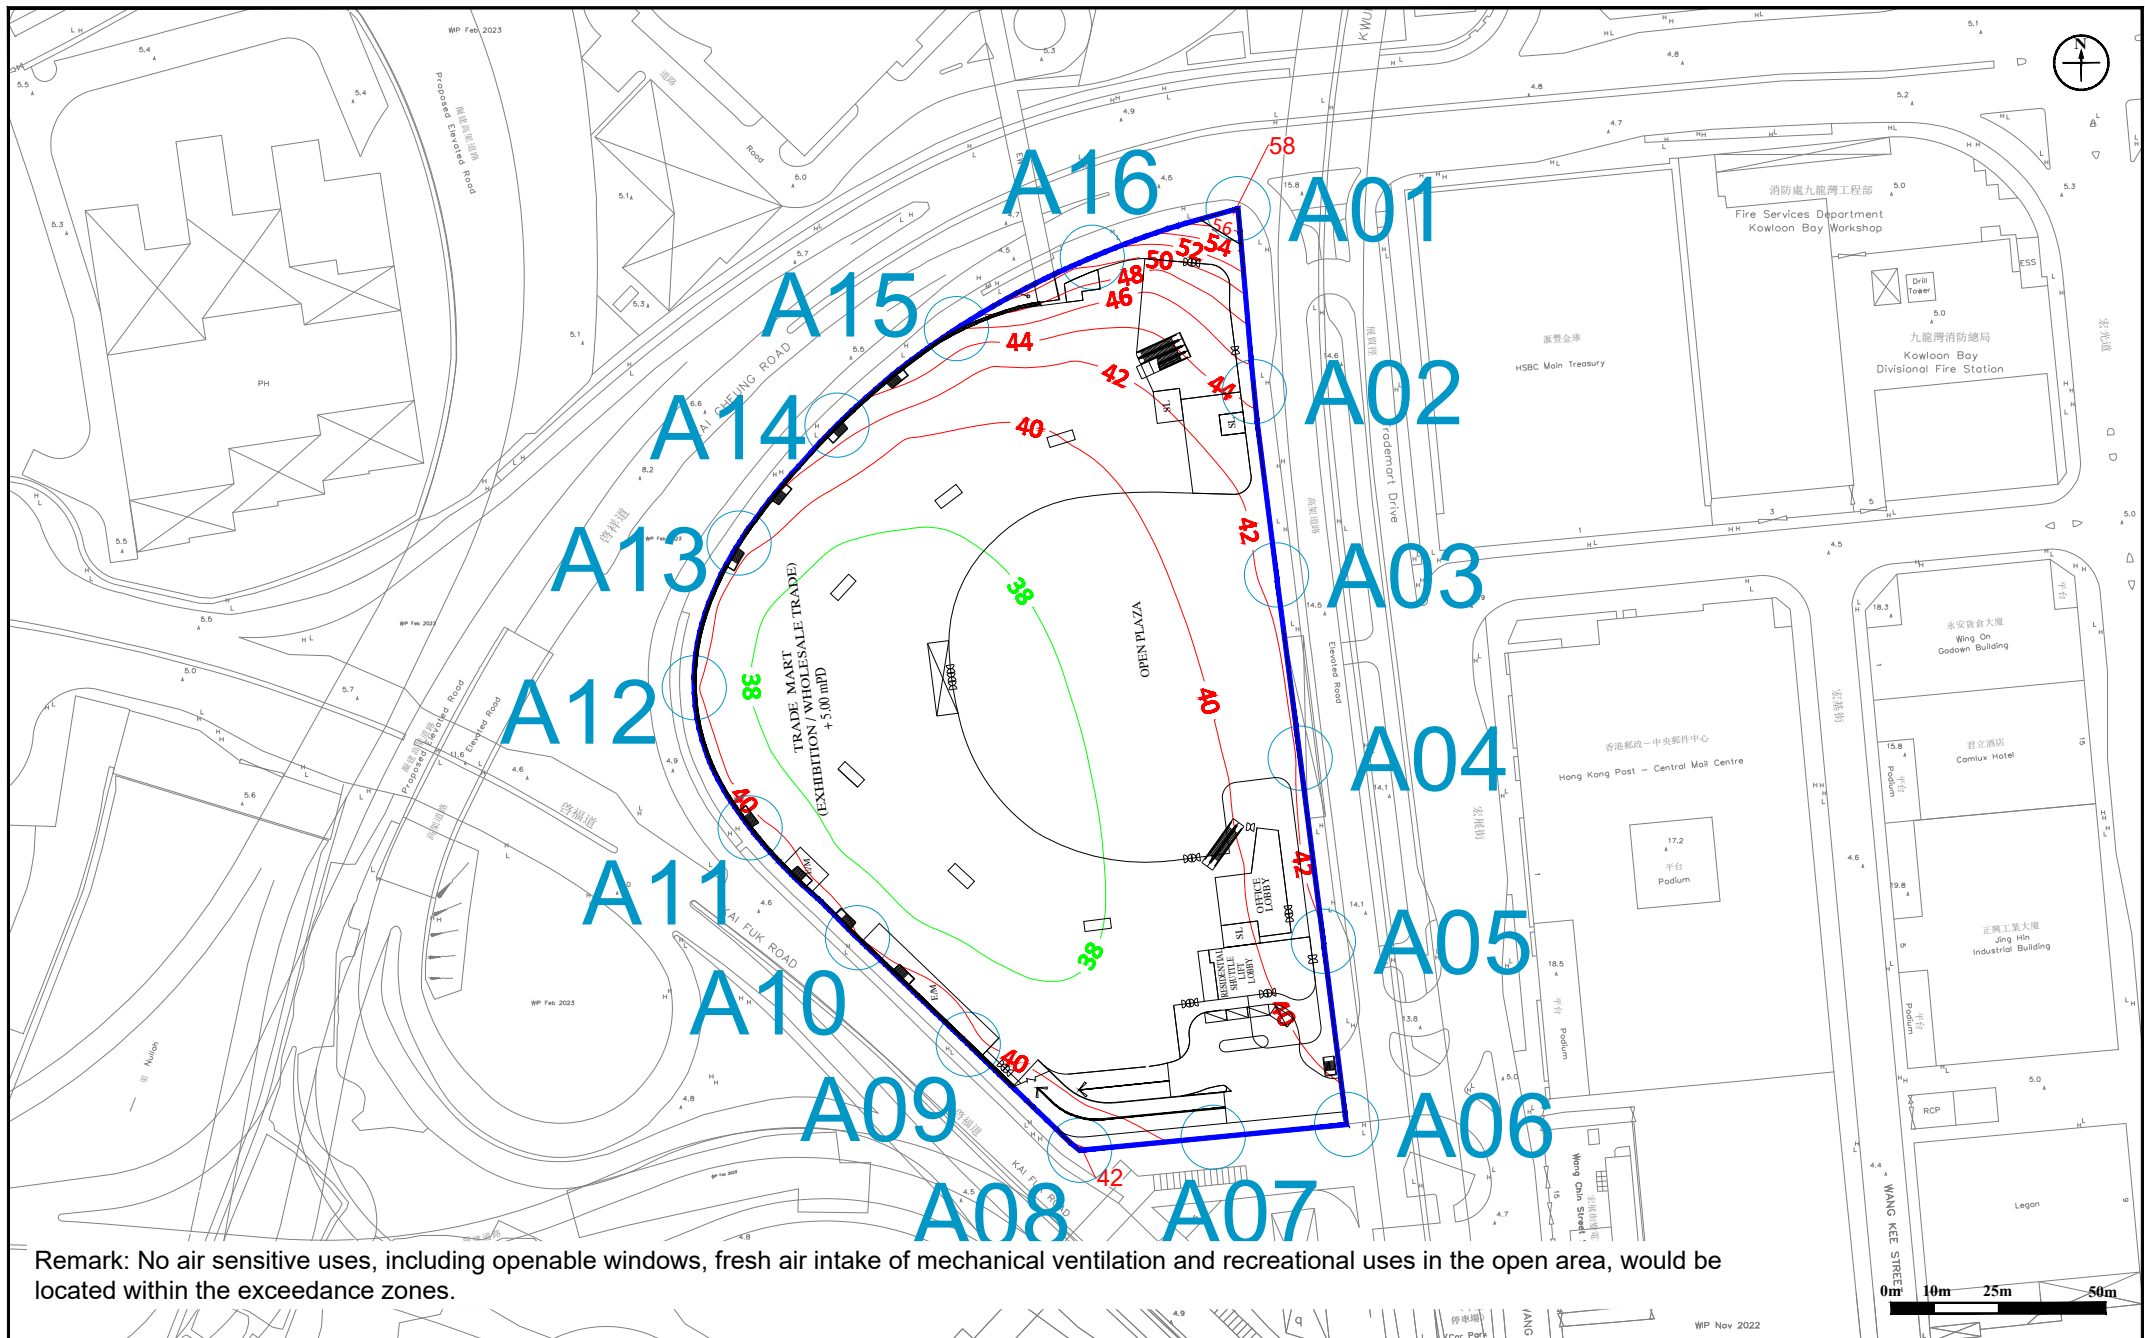

Town Planning Board

8 July 2022

ANNEX 2

Appendix: 4.14a		RAMBOLL	
Title:	Contour Map of the 19th Highest Hourly Average Concentration of NO ₂ in µg/m ³ (Assessment Level: 1.5m Above Ground) (AQO standard: 200µg/m ³)	Drawn by:	SC
Project:	Proposed Residential (Flat) and Permitted Commercial and Trade Mart Redevelopment with Minor Relaxation of Building Height Restriction, New Kowloon Inland Lot No. 6032, 1 Trademart Drive, Kowloon Bay, Kowloon	Checked by:	CC

ANNEX 3

Apron Corner of KTDA planned for commercial development; and to the southeast is the Kowloon Bay Action Area (KBAA), which is also intended for commercial developments.

No.	Name of the Development	Building Height (mPD)
A	Billion Centre	140
B	YHC Tower	140
C	Enterprise Square II	133
D	Megabox	170
E	Enterprise Square III	164
F	Manhattan Place	173
G	Capital Tower	120
H	One Kowloon	161
I	Exchange Tower	126
J	FTLife Tower	120
K	Kingston International Centre	120
L	CCB Centre	134
M	Goldin Financial Global Centre	140

2.2.3 The KTDA comprises six key areas including the Kai Tak City Centre (*where there is a cluster of private and public housing developments, as well as “Government, Institution and Community” facilities*), Kai Tak Sports Park, Metro Park, Runway Precinct (mainly planned for residential developments), Tourism and Leisure Hub (with a cruise terminal and associated tourism facilities) and the South Apron Corner (for commercial developments). The newly constructed mid-high-rise residential developments in Kai Tak City Centre include the following:

No.	Name of the Development	Building Height (mPD)
1	The Henley	130
2	K Summit	130
3	Upper Riverbank	130
4	Monaco One	120
5	Vibe Centro	120
6	K City	120
7	Victoria Skye	120
8	One Kai Tak	110
9	Tak Long Estate	120

2.2.4 In the local context, the Site is located in a well-established mixed-use neighborhood with commercial and industrial developments, Government, Institution or Community (“G/IC”) facilities as shown in **Figure 2.6**.

- To the immediate east is the G/IC facilities (i.e. Central Mail Centre, HSBC Main Treasury Building) to the immediate east;

4 THE COMPREHENSIVE REDEVELOPMENT PROPOSAL

4.1 The Comprehensive Redevelopment Proposal

- 4.1.1 The proposed development comprises six 33-36 storeys residential towers, one 4-storey mixed block (comprising Retails, DCCE, RCHE and Office Base of Social Work Service for Pre-primary institutions) and one 27-storey office tower (including refuge floor) atop a 2-storey podium mainly for retail/commercial and trade mart uses. The building height (BH) for the proposed residential scheme has adopted a stepped BH profile generally descending from 140mPD (hinterland) to 129.88mPD (towards Kai Tak Waterfront), while, the proposed office tower and mixed block with BH of 137mPD and 33mPD, respectively are proposed along the eastern side of the Site facing Trademart Drive. All carparking spaces/ loading and unloading bays and part of the E&M facilities will be provided at the two levels of basement.
- 4.1.2 Based on a proposed PR of about 6.144 (including PR of about 0.05 for footbridge)/ Gross Floor Area of about 136,888m² (including 1,114m² for the footbridge connection with the existing northern and southern government footbridge), the proposed development will yield a total number of 1,881 residential units with an average flat size of 45.6m² and about 47,260m² GFA spaces for office and commercial/ retail (including trade mart uses). Not less than 11,285m², in accordance with the lease and zoning requirements in respect of the Site, will be dedicated for trade mart uses to allow for the display, exhibition of, and wholesale trade in manufactured goods or services.
- 4.1.3 To cater for the future demand arising from the anticipated population of the development (i.e. 5,079 population), the proposed development will provide local services / daily necessities which shall include shops, restaurants, clinic, a 6-classroom kindergarten, supermarket within the shopping arcade. Besides, a 30 places of Day Care Centre for the Elderly, 60 places of Residential Care Home for the Elderly and Office Base of Social Work Services for Pre-primary Institutions (SWSPPI) will also be provided within the development. The Applicant will design and construct the bare-shell premises for the SWSPPI according to the specifications of the Social Welfare Department (SWD). It will be handed over to SWD for the selection of an appropriate service operator to run and manage the aforementioned facility.
- 4.1.4 The Schematic Architectural Drawings for the proposed development are presented in **Appendix 1** of the Supporting Planning Statement. The key development parameters and proposed floor uses of the proposed development are provided in **Tables 4.1** and **4.2**, respectively.

Table 4.1: Key Development Parameters

Overall Development			
Total Site Area	22,280 m ² (approx.)		
	Domestic	Non-domestic	Total
Maximum Plot Ratio	3.854	2.29*	6.144
GFA (approx.)	85,867m ²	51,021m ² *	136,888m ²
No. of Blocks	8 blocks (6 Residential Towers + 1 Office Tower + 1 Mixed Block)		
No. of Residential Units	1,881		
Design Population (Based on 2.7)	5,079		
Average Flat Size	45.6m ²		
Building Height (No. of Storey/mPD)			
Domestic	- T1-T7: Not more than 36 storeys* (excluding 1 level of podium garden, 2 levels of commercial podium and 2 basement levels) / Not more than 140 mPD		
Non-Domestic			
a) Commercial Podium	- 2 storeys/ Not more than 16mPD		
b) Mixed Block	- 4 storeys (excluding 2 levels of commercial podium and 2 basement levels)/ Not more than 33mPD		
c) Office Tower	- 27 storeys*# (excluding 2 levels of commercial podium and 2 basement levels) / Not more than 137 mPD		
Site Coverage			
- Podium (Below 15m)	- Not more than 65% (Footbridge not included)		
- Tower (Above 15m)	- Not more than 44% Domestic: 28% Non-Domestic: 16%		
Private Open Space	Not less than 5,100m ²		

* Transfer Plate is not included

Refuge Floor is included

*including GFA of

- 1) Office: 27,130m²;
- 2) Trade mart: 11,285m²,
- 3) Shop and Service and Eating Place: 8,845m²
- 4) Kindergarten: 557m²
- 5) The proposed link bridge connection to the existing southern footbridge and openings to the existing northern footbridge: 1,114m²
- 6) Proposed Social Welfare Facilities (1,560m² for RCHE, 365m² for DE and 165m² for Office Base of Social Work Service for Pre-primary institutions): 2,090m²
