Geotechnical Planning Review Report

Geotechnical Planning

Review Report for

Application for Permission under Section 16
of The Town Planning Ordinance (Cap.131)
Proposed Temporary Place of Recreation, Sports or
Culture (Hobby Farm) with Ancillary Facilities for a
Period of 3 Years and Associated Filling of Land at
Lots 1275 (Part), 1279 (Part), 1280, 1281 (Part), 1282
and 1284 (Part) in D.D. 96, Ma Tso Lung, New

Territories

January 2025

W.K.Poon

Proposed Temporary Place of Recreation, Sports or Culture (Hobby Farm) with Ancillary Facilities for a Period of 3 Years and Associated Filling of Land at Lots 1275 (Part), 1279 (Part), 1280, 1281 (Part), 1282 and 1284 (Part) in D.D. 96, Ma Tso Lung, New Territories

Geotechnical Planning Review Report

1. INTRODUCTION

W.K. Poon was appointed to carry out Geotechnical Planning Review Report (GPRR) for the application for permission under Section 16 of the Town Planning Ordinance (Cap.131) for Proposed Temporary Place of Recreation, Sports or Culture (Hobby Farm) with Ancillary Facilities for a Period of 3 Years and Associated Filling of Land at Lots 1275 (Part), 1279 (Part), 1280, 1281 (Part), 1282 and 1284 (Part) in D.D. 96, Ma Tso Lung, New Territories.(hereafter collectively called "the Site")

This GPPR is made based on desk study and review of available documentary information and proposed development plan. The geology and site conditions are described. Potential geotechnical constraints are identified in the assessment.

2. THE SITE AND NEARBY MAN-MADE SLOPE FEATURES

The site is a filling land (Approx. 0.2m higher than surrounding ground) at Ma Tso Lung Road, Ma Tso Lung, New Territories. Site photos taken in December 2024 are presented in Appendix A (see Photos A to D). General view and close up view of the Site is shown on Photo A, B, C and D. The location plan and the aerial view of the Site is presented in Figures 1 and 2, respectively.

According to the available SIMAR reports retrieved from Lands Department and SIS records obtained from Geotechnical Engineering Office (GEO), there are 9 nos. of registered geotechnical features lies within or in the vicinity of the site (see Figure 4). The features and the responsible lot/party are tabulated below:

Feature No.	Sub-division	Owner/Department	
2NE-D/C50	<u></u>	Lands Department	
2NE-D/C51	<u>-</u>	Lands Department	
2NE-D/C48	<u>-</u>	Lands Department	
2NE-D/C49	<u></u>	Lands Department	
2NE-D/CR53	<u>-</u>	Lands Department	
2NE-D/CR75	<u>-</u>	Lands Department	
2NE-D/CR76	<u>-</u>	Lands Department	
2NE-D/CR 143	1	DD96 Lot 1275	
	2	DD96 Lot 1283	
	3	Water Supplies	
		Department	
2NE-D/F17	1	_DD96 Lot 1275	
	2	DD96 LOT1274	
	3	Lands Department	

Proposed Temporary Place of Recreation, Sports or Culture (Hobby Farm) with Ancillary Facilities for a Period of 3 Years and Associated Filling of Land at Lots 1275 (Part), 1279 (Part), 1280, 1281 (Part), 1282 and 1284 (Part) in D.D. 96, Ma Tso Lung, New Territories

Geotechnical Planning Review Report

A copy of the SIMAR reports and slope records are enclosed in Appendix B and C, respectively. The location of the above captioned features is also presented in Figure 3.

3. Desk Study

Desk study has been carried out to search and review the existing building records, previous ground investigation data and geotechnical study reports kept by the Geotechnical Information Unit (GIU) of Geotechnical Engineering Office (GEO) and the Buildings Department (BD).

3.1 Geotechnical Maps

The geology of the Site is shown on the Hong Kong Geological Survey (HKGS) Map Geological Map of Hong King (Web-based Edition 2006). The local geology of the Site is presented in Figure 5(Appendix E) and described below.

3.1.1 Solid Geology

The 1:20,000 scale geological maps indicated that regional area around the Site is underlain by Deep Bay Granite of the Lok Ma Chau Formation in Carboniferous.

3.1.2 Superficial Geology

No superficial deposits has been recorded within or in the vicinity of Site. But approx. 0.2 m land filling on the site.

3.1.3 Structural Geology

No fault has been recorded within or in the vicinity of the Site. Several faults have been recorded on geological map to the northwest and northeast of the Site.

3.2 Enhanced Natural Terrain Landslide Inventory

In 1995, the GEO compiled the Natural Terrain Landslide Inventory (NTLI) from an interpretation of high-altitude (8,000ft and above) aerial photographs dated from 1945 to 1994 (King, 1999). In 2007, the GEO produced an Enhanced Natural Terrain Landslide Inventory (ENTLI) using low-altitude (8,000ft and below) aerial

Proposed Temporary Place of Recreation, Sports or Culture (Hobby Farm) with Ancillary Facilities for a Period of 3 Years and Associated Filling of Land at Lots 1275 (Part), 1279 (Part), 1280, 1281 (Part), 1282 and 1284 (Part) in D.D. 96, Ma Tso Lung, New Territories

Geotechnical Planning Review Report photographs to update the NTLI.

In accordance with GEO Report No. 138 (GEO, 2016), landslides are classed as either "Relict" or "Recent", depending on their appearance in aerial photographs. "Relict" landslides are defined as those where the main scarp is well-defined but vegetation has re-established on the scar on the earliest set of available aerial photographs. "Recent" landslides are defined as having occurred within the timespan of the aerial photograph coverage. These are typically identified as having a light tone on the aerial photographs and are bare of vegetation.

The ENTLI has no record of any relict landslides.

3.3 Relevant Previous Ground Investigation Works

No previous ground investigation has been taken place within the Site. The previous ground investigation reports adjacent to the site have been retrieved and summarized below:

GIU Report No,	GI Station Nos:	Report Title	GI Stations related to Feature No,
51471	CH1,CH2,CH3, CH4,CH5, CH6,SP1	Consultancy for the investigation, Design and Supervision of Slope and Retaining Wall Upgrading Works at Ma Tso Lung Sun Tsuen, Yuen Long on Lot 1283 in DD96	2NE-D/CR 143

3.4 DH Orders

No DH Order relevant to the man-made features has been issued within or in the vicinity of the Site. But DH orders had been issued to 2NE-D/CR 143 (DH Orders No.: DH0073/NT/03/C) in 2003 and the improvement works of the slope has been completed in the same year.

Proposed Temporary Place of Recreation, Sports or Culture (Hobby Farm) with Ancillary Facilities for a Period of 3 Years and Associated Filling of Land at Lots 1275 (Part), 1279 (Part), 1280, 1281 (Part), 1282 and 1284 (Part) in D.D. 96, Ma Tso Lung, New Territories

Geotechnical Planning Review Report

4. Impacts of proposed works on existing slopes/retaining walls & Natural Hillsides

4.1 Feature No. 2NE-D/C50

According to the SIS record, the registered slope is 9m in height and 15m in length with slope gradient ranging at about 35 degree to the horizontal, which is located at north of the site from 100m. The proposed development will not affect the geotechnical features. No further detailed of the slope and wall stability assessment shall be carried out (i.e. Geotechnical assessment report).

4.2 Feature No. 2NE-D/C51

According to the SIS record, the registered slope is 6.5m in height and 36m in length with slope gradient ranging at about 43 degree to the horizontal, which is located at north of the site from 80m. The proposed development will not affect the geotechnical features. No further detailed of the slope and wall stability assessment shall be carried out (i.e. Geotechnical assessment report).

4.3 Feature No. 2NE-D/C53

According to the SIS record, the registered slope is 2m in height and 12m in length with slope gradient ranging at about 45 degree to the horizontal and 4m in height and 8m in length with slope gradient ranging at about 60 degree to the horizonta, which is located at north of the site from 50m. The proposed development will not affect the geotechnical features. No further detailed of the slope and wall stability assessment shall be carried out (i.e. Geotechnical assessment report).

4.4 Feature No. 2NE-D/C49

According to the SIS record, the registered slope is 3.3m in height and 28m in length with slope gradient ranging at about 70 degree to the horizontal, which is located at north of the site from 80m. The proposed development will not affect the geotechnical features. No further detailed of the slope and wall stability assessment shall be carried out (i.e. Geotechnical assessment report).

Proposed Temporary Place of Recreation, Sports or Culture (Hobby Farm) with Ancillary Facilities for a Period of 3 Years and Associated Filling of Land at Lots 1275 (Part), 1279 (Part), 1280, 1281 (Part), 1282 and 1284 (Part) in D.D. 96, Ma Tso Lung, New Territories

Geotechnical Planning Review Report

4.5 Feature No. 2NE-D/CR48

According to the SIS record, the registered slope is 1.5m in height and 22m in length with slope gradient ranging at about 45 degree to the horizontal and the registered wall is vertical and 2.5m in height and 31m in length, which is located at north of the site from 50m. The proposed development will not affect the geotechnical features. No further detailed of the slope and wall stability assessment shall be carried out (i.e. Geotechnical assessment report).

4.6 Feature No. 2NE-D/CR75

According to the SIS record, the registered slope is 3m in height and 29m in length with slope gradient ranging at about 50 degree to the horizontal and the registered wall is vertical and 2.5m in height and 22m in length, which is located at northeast of the site from 100m. The proposed development will not affect the geotechnical features. No further detailed of the slope and wall stability assessment shall be carried out (i.e. Geotechnical assessment report).

4.7 Feature No. 2NE-D/CR76

According to the SIS record, the registered slope is 3m in height and 6m in length with slope gradient ranging at about 65 degree to the horizontal and the registered wall is vertical and 3.5m in height and 29m in length, which is located at northeast of the site from at least 100m. The proposed development will not affect the geotechnical features. No further detailed of the slope and wall stability assessment shall be carried out (i.e. Geotechnical assessment report).

4.8 Feature No. 2NE-D/CR143

According to the SIS record, the registered slope is 2.7m in height and 27m in length with slope gradient ranging at about 40 degree to the horizontal and the registered wall (face angle ranging from 40 to 52 degrees) is 2.5m in height and 40m in length, which is located at north of the site from 10m. The proposed development will not affect the geotechnical features. No further detailed of the slope and wall stability assessment shall be carried out (i.e. Geotechnical assessment report).

Proposed Temporary Place of Recreation, Sports or Culture (Hobby Farm) with Ancillary Facilities for a Period of 3 Years and Associated Filling of Land at Lots 1275 (Part), 1279 (Part), 1280, 1281 (Part), 1282 and 1284 (Part) in D.D. 96, Ma Tso Lung, New Territories

Geotechnical Planning Review Report

4.9 Feature No. 2NE-D/F 17

According to the SIS record, the registered slope is 4m in height and 38m in length with slope gradient about 50 degree to the horizontal, which is located at north-east of the site from 15m. The proposed development will not affect the geotechnical features. No further detailed of the slope and wall stability assessment shall be carried out (i.e. Geotechnical assessment report).

4.10 Existing features at site

There are no existing structures or features at the proposed site.

5. CONCLUSION

Based on the above discussion, it can be concluded that the proposed development is considered to be feasible from geotechnical point of view. The construction is unlikely posting particular problems to the surrounding area under careful planning, proper execution and vigilant supervision.

It is essential to search and review the background information of existing buildings, geotechnical features and underground services within and in the vicinity of the site. Site investigation is proposed to reveal/confirm the subsoils and the ground regime within and in the vicinity of the site as well as to determine the engineering properties of subsoils and rock. The ground investigation field works should be preceded under supervision of suitably qualified engineers and technically competent persons conforming the requirements specified in the "Code of Practice for Site Supervision 2009" published by the BD.

For safety and cost effective, the foundation design and excavation planning as well as the design of geotechnical structure should be based on geological horizons inferred from the ground investigation results, groundwater table interpreted from the piezometer/standpipe monitoring records and geotechnical parameters determined and adopted by field and laboratory testing.

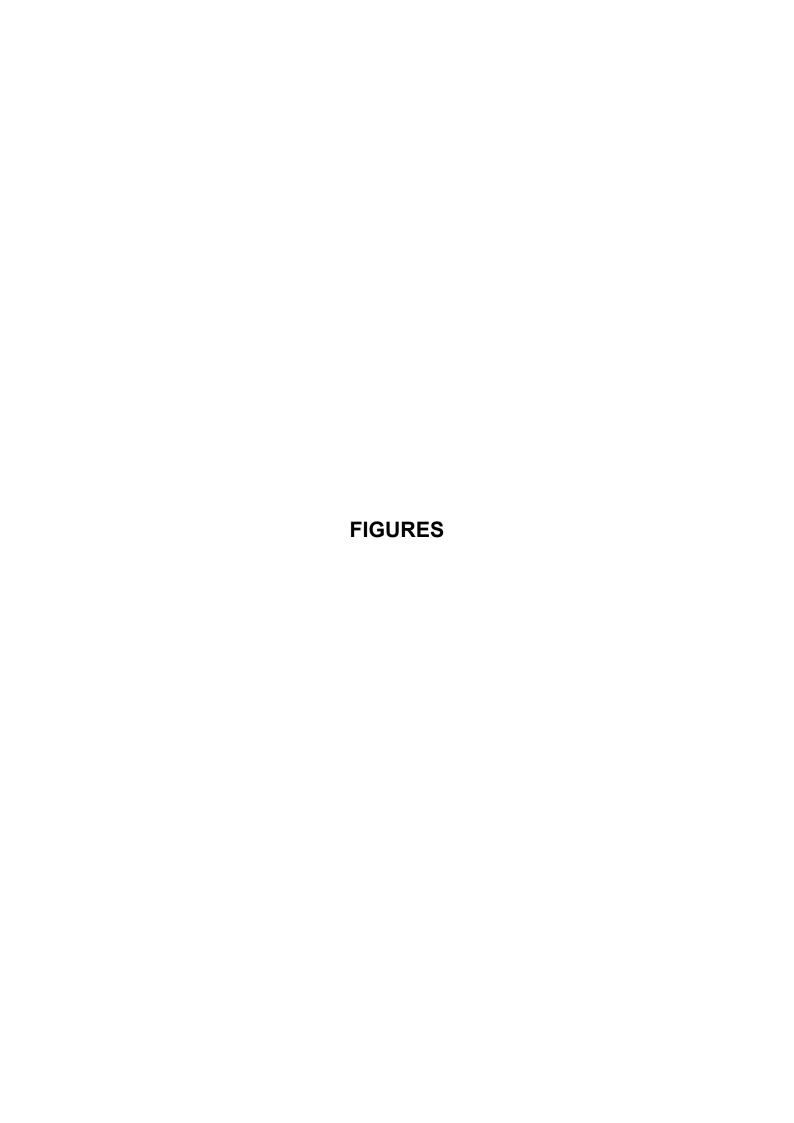

A comprehensive precautionary monitoring program including settlement markers, tiling, vibration check points as well as groundwater observation wells shall be

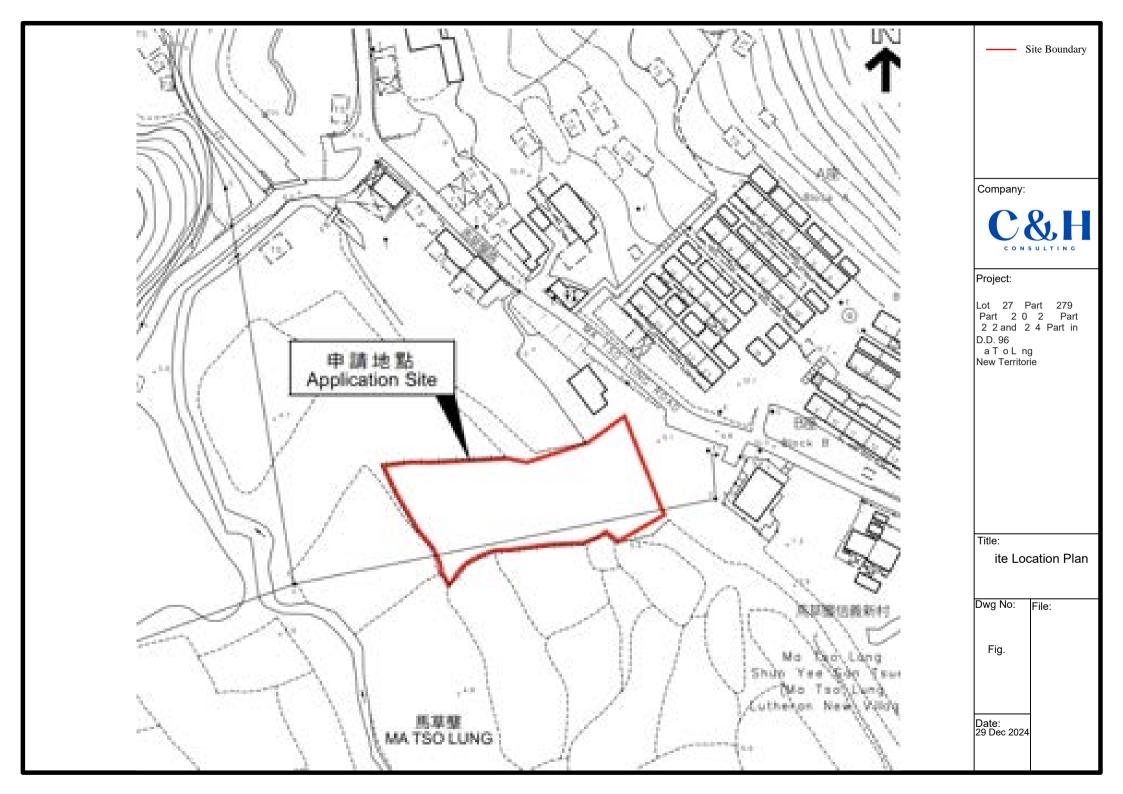

Proposed Temporary Place of Recreation, Sports or Culture (Hobby Farm) with Ancillary Facilities for a Period of 3 Years and Associated Filling of Land at Lots 1275 (Part), 1279 (Part), 1280, 1281 (Part), 1282 and 1284 (Part) in D.D. 96, Ma Tso Lung, New Territories

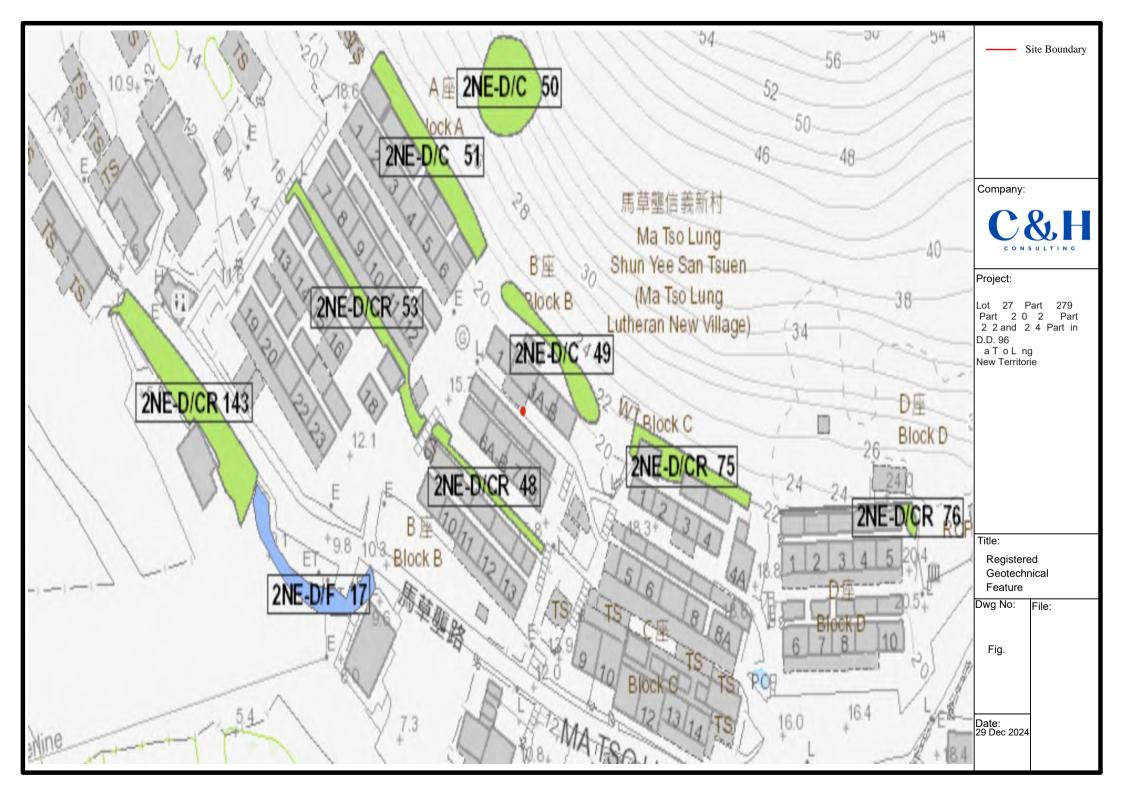

Geotechnical Planning Review Report

implemented to ensure demolition of foundation of existing buildings and substructure construction being carried out safety and soundly.

A natural terrain hazard study will be carried out in the next stage of the project to investigate any potential natural terrain hazard will pose to the proposed development and subsequence mitigation measures to mitigate the hazard if found necessary.

1. INTRODUCTION

In February 2008, Fugro Geotechnical Services Ltd (Fugro) was awarded the New Territories West Term Contract No. GE/2008/04 for ground investigation works by the Geotechnical Engineering Office (GEO) of the Civil Engineering and Development Department (CEDD).

This report presents the results of works order number GE/2008/04.42 which involved a ground investigation on Feature No. 2NE-D/R1 a retaining wall adjacent to Ma Tso Lung Road, located to the north-east of Ma Tso Lung and south-west of Shun Yee San Tsuen, Yuen Long, New Territories. The Works consisted of rotary coring, installation of standpipe, water level monitoring, excavation of an inspection pit, logging and the reinstatement of the exploratory holes. Fieldwork for the investigation was performed between the 1st March and the 2nd March 2010, under the supervision of Au Posford Consultants Limited (the Engineer).

The factual field data are presented herein.

2. SITE DESCRIPTION

The site comprised feature no. 2NE-D/R1, located to the north-east of Ma Tso Lung and the south-west of Shun Yee San Tsuen, Yuen Long, New Territories. Refer to the enclosed Ground Investigation Plan; Figure 1. Feature 2NE-D/R1 is approximately 45m long and 5m wide in plan with a vertical height of some 2m. Ground Investigation locations included in this Works Order were located within an area defined by the following co-ordinates:

1	Easting (m) 828 025	Northing (m) 842 615
1. 2.	828 025	842 625
3.	828 030	842 615
4.	828 030	842 625

3. FIELDWORK

A programme of subsurface investigation, performed at the site between 1st March and 2nd March 2010, included the following:

- Exploratory coreholes with:
 - o continuous coring in hard strata
 - o small disturbed sampling in soils
- Exploratory inspection pit;
- Standpipe installation and groundwater monitoring;
- Surveying of investigation locations.

Fieldworks were performed under the full time supervision of a suitably experienced Fugro Geotechnical Field Technician (GFT).

Investigation locations are indicated in Figure 1 (Ground Investigation Plan) relative to the site layout and existing site features. Field test results and observations are presented in Appendices C to E. The presentation of field results is preceded by a checklist of rock and soil descriptions and summarised explanations of log symbols and classification systems in Appendices A and B respectively.

The soil and rock encountered in drillholes has been described in accordance with Geoguide 3 and the Checklist for Rock and Soil Descriptions presented in Appendix A. Corehole records are presented in the "Coreole Records and Photographs", Appendix C.

A total of six (6) U100 samples and four (4) large disturbed samples were taken of the soil exposed at the surface above and below the retaining wall under investigation. Further details of the samples taken are not included in this reports.

3.1. Exploratory Coreholes

Four (4) horizontal coreholes (CH1, CH3, CH5 and CH6) and two (2) inclined coreholes were cored on site to depths of 3.00m (CH1 to CH3, CH5 and CH6) and 5.00m (CH4). Coring was performed using a portable rotary coring machine with a CAT C-100 core barrel. The coreholes were terminated according to instructions issued by the Engineer.

All samples were retained in purpose built core boxes labelled with contract and drilling details. All samples were logged on site then transported to the contract storage facility at the Works Area and photographed. Photographs are presented with the corehole logs in Appendix C. The photographic board shown in each photograph presents contract and works order details as well as box depths and numbers with reference to a standard KodakTM colour chart and scale.

3.2. Groundwater Measurements

One (1) standpipe was installed to a depth of 3.00m below existing ground level at the location of the inspection pit SP1. A response test for the instrument was carried out, after installation, to ensure functionality. Refer to Appendix D "Installation Detail and Response Test Record"

The installation was monitored for a period of seven (7) days after completion of the response tests. The recorded groundwater levels are presented in tabular form in Appendix E, "Record of Water Levels".

3.3. Inspection Pit

An inspection pit was manually excavated at a location instructed by the Engineer. The location of the inspection pit is included on the Site Plan presented in Figure 1 and the inspection pit survey data are presented in Table 1. No further records or photographs of the inspection pit are presented in this report.

3.4. Surveying Investigation Locations

Investigation locations were set out by survey with adjustments made in agreement with the Engineer to allow for site conditions. Following completion of the fieldwork, levels and coordinates for each location were determined with respect to an existing benchmark. Coordinates and levels of all test locations are summarised in the Survey Record of Investigation Locations, Table 1, and presented on individual logs. Co-ordinates are relative to Hong Kong Metric Grid (1980) and reduced levels are related to the Hong Kong Principal Datum (PD).

4. SUBSURFACE CONDITIONS

According to the geological survey map of San Tin, published by the Geotechnical Control Office entitled "San Tin, Sheet 2, Solid and Superficial Geology, Series HGM20, Scale 1: 20 000. (Edition 1-1989)", the site is underlain by well-sorted to semi-sorted Alluvium comprising clay/silt, sand and gravel, formed during the Holocene period of the Quaternary era.

5. DIGITAL RECORDS

The corehole logs have been produced using gINT, a widely used commercial software package providing ground investigation data in ASCII format. The data format is in accordance with the Association of Geotechnical and Geoenvironmental Specialists (AGS) publication, "Electronic Transfer of Geotechnical and Geoenvironmental Data" (AGS, 1999). The field headings comply with the recommendations of the AGS with local variations as recommended by the GEO.

The data is provided on a compact disk with this report and can be found in Appendix F.

CHECKLIST FOR ROCK DESCRIPTION

GEOTECHNICAL ENGINEERING OFFICE, HKSAR

1. STRENGTH

Term Extremaly weak Identification

Easily crumbled by hand; Indented deeply by thumbnail. Crumbled with difficulty, scratched easily by thumbnail; pealed easily by pocket Very weak

Broken into pieces by hand; scratched by thumbnall; peeled by pocket knife; Weak deep Indentations (to 5 mm) by point of geological pick; hand-held specimen

easily broken by single light hammer blow.

Broken with difficulty in two hands; scratched with difficulty by thumbnail; Moderataly weak

difficult to peel but easily scretched by pocket knife; shallow indentations easily made by point of pick; hand-held specimen usually broken by single

Fight hammer blow.

Scratched by pocket knife; shallow indentations made by firm blow with point of Moderately strong pick; hand-held specimen usually broken by single firm hammer blow. Point

load strength (PLS) 0.5 - 2 MPa.

Firm blows with point of pick cause only superficial surface damage; hand-held Strong specimen requires more than one firm hammer blow to break. PLS 2 - 4

Many hammer blows required to break specimen. PLS 4 - 8 MPa. Very strong

Specimen only chipped by hammer blows. PLS > 8 MPa. Extremely strong

2. COLOUR

Perameter

Terms

Light, Dark Value

Pinkish, Reddish, Yellowish, Orangish, Brownish, Greenish, Bluish, Purplish, Chroma

Grevish

Pink, Red, Yellow, Orenge, Brown, Green, Blue, Purple, White, Grey, Black Hue

For uniform colour distribution, choose e hue, supplemented by a value and/or chroma if necessary.

For non-uniform distribution, repeat this procedure using one of the following descriptors: spotted, mottled, dappled, streaked, striped (e.g. light pinkish grey spotted with black).

State whether sample was wet or dry when described.

3. TEXTURE/FABRIC

Texture Terms (Applicable Mainly to Igneous Rocks)

Equigranular, Inequigranular, Megacrystic, Porphyritic, Crystelline, Cryptocrystelline, Aphanitic

Describe preferred orientation of grains/crystals where epparent.

Describe Intensity, spacing, continuity and any preferred orientation of microfractures where apparent.

4. MATERIAL WEATHERING/ALTERATION

<u>Decomposition</u> Term	Grade Sy <u>mbol</u>	Typical Characteristics
Residual	٧ī	Original rock texture completely destroyed; can be crumbled by
Soll		hand and finger pressure into constituent grains.
Completely	V	Original rock texture preserved; can be crumbled by hand end
Decomposed		finger pressure into constituent grains; easily indented by point of
		geological pick; slakes in water; completely discoloured compared with fresh rock.
Highly	I۷	Can be broken by hand into smaller pieces; makes a dull sound
Decomposed		when struck by hammer, not easily indented by point of pick; does not stake in water; completely discoloured compared with fresh rock.
Moderately	111	Cannot usually be broken by hand; easily broken by hammer;
Decomposed		makes a dull or slight ringing sound when struck by hammer, completely stained throughout.
Slightly	11	Not broken easily by hammer, makes a ringing sound when struck
Decomposed		by hammer, fresh rock colours generally retained but stelned nest joint surfaces.
Fresh	l	Not broken easity by hammer; makes e ringing sound when struck
Rock		by hammer, no visible signs of decomposition (i.e. no

This classification is applicable to igneous and volcanic rocks and other rocks of equivalent strength in fresh state

discolouration).

Disintegration

Dascribe small-scale cracking and fracturing caused by mechanical weathering, where epparent.

Describe state of elteration (e.g. minerelised, keolinised) where apparent.

5. ROCK NAME (Including Grain Size)

Igneous

Coarse- (6-20 mm), Medium- (2-6 mm) & Fine- (0.06-2 mm) grained GRANITE; GRANQDIORITE. Very Fine-grained (< 0.06 mm) RHYOLITE; BASALT. (Common types only, see Geoguide 3 for others).

Pyroclastic

PYROCLASTIC BRECCIA (> 60 mm), Lapini TUFF (2-60 mm), Coarse ash

TUFF (0.06-2 mm), Fine esh TUFF (< 0.06 mm).

Metamorphic

Folieted - SCHIST (> 0.06 mm), PHYLLITE (< 0.06 mm). Non-foliated MARBLE, QUARTZITE, FAULT BRECCIA.

Sedimentery

CONGLOMERATE, BRECCIA (>2 mm), SANDSTONE (0.06-2 mm), MUDSTONE (< 0.06 mm) = SILTSTONE (0.002-0.06 mm) + CLAYSTONE

(< 0.002 mm). (Common types only).

if rock name cannot be identified, describe grain size quantitatively, including textural term where appropriete.

6. STRUCTURE

Structural Term Bedded, Laminated, Massive Massive, Flow-banded

Rock Type Sedimentary Igneous, Pyroclastic Metamorphic

Foliated, Banded, Cleaved Spacing of Planar Structures

Very thick (> 2 m), Thick (0.6-2 m), Medium (200-600 mm),

Thin (60-200 mm), Very thin (20-60 mm),

Thickly-laminated (Sedimentary) (6-20 mm) or Narrow (Igneous, Metamorphic) (6-20 mm), Thinly-laminated (Sedimantary) (< 6 mm) or Very narrow (Igneous, Meternorphic) (< 6 mm).

Examples: Thickly-bedded SANDSTONE. Narrowly flow-banded RHYOLITE.

7. DISCONTINUITIES

Nature (Type of Discontinuity)

Fault zone Cleavage Fissure

Bedding

Fault Joint

Schistocity Shaar plane

Tension crack Foliation

Location and Orientation

Record location as co-ordinates or relative position along datum line, preferably on map or plan.

Record orientation as dip direction/dip In degrees (e.g. 032/55).

Extremely widely-spaced (> 6 m), Very widely-spaced (2-6 m), Widely-spaced (0.6-2 m), Medium-spaced (200-600 mm), Closely-spaced (60-200 mm), Very closely-spaced (20-60 mm), Extremely closely-spaced (< 20 mm).

In exposures, supplement spacing with description of rock block shape where possible. Descriptors: Blocky, Tabular, Columnar, Polyhedral.

Persistence (Area) extent or size of a discontinuity within a plane)

Measured maximum persistence dimension should be used where possible (e.g. the discontinuity trace length on the surfaces of rock exposures). For general descriptions of different discontinuity sets, relative terms should be used.

Rouohness

Waviness (large-scale): Estimate/measure wavelength and amplitude in metres.

Unevenness (small-scale), use one term from the following:

Rough stepped Rough undulating Rough planar

Smooth stepped Smooth undulating Smooth planar

Slickensided stepped Stickensided undulating Silckensided planar

Aperture Size

Wide (> 200 mm), Moderately wide (60-200 mm), Moderetely narrow (20-60 mm), Narrow (6-20 m), Very narrow (2-6 mm), Extremely narrow (> 0-2 mm), Tight (zero).

Infilling (Nature)

Clean Non-cohesive soil Calcite

Surface staining Cohesive soil

Decemposed/ disIntegrated rock

Manganese Quartz Каобл Other (Specify)

Give full description of Infili materials/minerals where appropriate.

<u>Seepage</u> Dry

Damp/wet

Seepage present (estimate quantity in 1/sec or 1/min)

Fracture State

In horsbele cores, measure the following: Total Core Recovery (TCR), Solid Core Recovery (SCR), Rock Quality Designation (RQD), Fracture Index (FI). See Geoguide 3 for definitions.

8. MASS WEATHERING

Тегт	Zone Symbol	Typical Characteristics
Residuel Soil	RS	Residual soil derived from insitu weathering; mass structure and material texture/fabric completely destroyed: 100% soil
	/ PW	Less than 30% rock
	0/30	Soil retains original mass structure and material texture/fabric (i.e. seprolite)
		Rock content does not affect shear behaviour of mass, but relict discontinuities in soil may do so.
Partially	1	Rock content may be significant for investigation and construction.
Weathered	{ ₽W	30% to 50% rock
Rock	30/50	Both rock content and relict discontinuities may affect shear behaviour of mass.
	PW	50% to 90% rock
	50/90	Interlocked structure.
	PW	Greater than 90% rock
	90/100	Small emount of the material converted to soil along discontinuities.
Unweathered	UW	100% rock
Rock		May show elight discolouration along discontinuities.

9. ADDITIONAL GEOLOGICAL INFORMATION

Record geological formation name if known. Avoid conjecture. Refer to HKGS maps & memoirs for further information.

NOTES:

- Rock material dascription normally includes: strength, colour, texture/febric, material weathering/eiteration and ROCK NAME.
- Rock mass description normally includes: strength, colour, structure, mass weathering , ROCK NAME, discontinuities end additional geological information. Can be supplemented with more detailed information on texture/fabric and material weathering/alteration of different materials within the mass where necessary.

CHECKLIST FOR SOIL DESCRIPTION

GEOTECHNICAL ENGINEERING OFFICE, HKSAR

1. STRENGTH (Compactness & Consistency)

Soll Type	<u>Term</u>	<u>Identification</u>
Very Coarse (COBBLES & BOULDERS)	Loose Dense	By inspection of voids and particle packing in the field.
20,	/ Very loose	SPT 'N' value 0-4.
Coarse	Loose	SPT 4-10; can be excavated with spade; 50 mm peg easily driven.
(SANDS &	Medium dense	SPT 10-30.
GRAVELS)	Dense	SPT 30-50; requires pick for excavation; 50 mm peg hard to drive.
	Very dense	SPT > 50.
	Very soft	Undrained shear strength (USS) < 20 kPa; exudes between fingers when squeezed in hand.
_	Soft	USS 20-40 kPa; moulded by light finger pressure.
Fine	Firm	USS 40-75 kPa; can be moulded by strong linger pressure.
(CLAYS & SILTS)	Stiff	USS 75-150 kPa; cannot be moulded by fingers; can be indented by thumb.
	Very stiff or hard	USS > 150 kPa; can be indented by thumbnail.
Organic	Compact	Fibres already compressed together.
(ORGANIC CLAYS, SILTS	Spongy	Very compressible and open structure.
SANDS & PEAT	S) Plastic	Can be moulded in hand and smears fingers.

Terms applicable only to transported soils. For soils derived from insitu rock weathering, record ectual values of quantitative tests (e.g. SPT 'N' value) as part of the description, where appropriate.

2. COLOUR

<u> Parameter</u>	Temis
Value .	Light, Dark
Chroma	Pinkish, Reddish, Yellowish, Orangish, Brownish, Greenish, Bluish, Purplish, Greyis
Hue	Pink, Red, Yellow, Orange, Brown, Green, Blue, Purple, White, Grey, Black

For uniform colour distribution, choose a hue, supplemented by a value and/or chroma if necessary.

For non-uniform distribution, repeat this procedure using one of the following descriptors: spotted, mottled, dappled, streaked, striped (e.g. light yellowish brown mottled with rad).

State whether sample was wet or dry when described.

3. PARTICLE SHAPE & COMPOSITION

Characteristic	<u>Terms</u>
Form	Equidimensional, Flat, Elongate, Flat & Elongate
Angularity	Angular, Subangular, Subrounded, Rounded
Surface Texture	Smooth, Rough, Glassy, Honeycombed, Pitted, Striated

Describe composition of coarse particles where appropriate. Gravel and larger particles ere usually rock fragments (e.g. granite, tuff); sand particles are usually individual minerals (e.g. quartz, feldspar).

4. STRUCTURE

Soil Type	<u>Term</u>	<u>Identification</u>
	Нотоделоиз	Deposit consists essentially of one type.
Coarse &	interstretified	Alternating layers of varying types or with bands or lenses of other
Fine	(Interbedded or	materials.
	(Interlaminated)	
Coarse	Heterogenous	A mixture of types.
Man.	∫ Fissured	Breaks into polyhedral fragments along fissures.
Fine	l Intact	No fissures.
0	∫ Fibrous	Plant remains recognizable & retain some strength.
Organic	Ղ Amorphous	No recognizable plant remains.

Describe spacing of bedding planes, fissures, shell bends, etc using the spacing terms given in Items 6 & 7 for rock description (see other side).

Above terms applicable only to transported soils. For soils derived from insitu rock weathering, describe relict structures in accordance with item 6 of rock description (see other side).

5. WEATHERING

Soils Derivad from Insitu Weathering of Rocks

There ere two main types: saprolites (rock texture/structure retained) and residual soits (rock texture/structure completely destroyed). Describe state of weathering in accordance with items 4 & 8 for rock description (see other side).

Sedimentary (Transported) Soils

Coarse soils: Describe overall discolouration of soil and degree of decomposition of gravel and larger particles (see item 4, other side). Also note any signs of disintegration of large particles where apparent.

Fine Soils: Describe overall discolouration of soil where apparent.

6. SOIL NAME

A. Basic Soil	Types		
Soil Type		izes (mm)	<u>Identification</u>
BOULDERS	-	> 200	Only seen complete in pits or exposures.
COBBLES	-	60 - 200	Often difficult to recover from boreholes.
		i	Easily visible to naked eye; particle shapa and grading
	Coarse	20 - 60	can ba described.
GRAVELS	Medium	6-20 <	Well-graded: wide range of grain sizes.
	LFine	2 - 6	Poorly-graded: not well-graded (split further into
			uniform or gap-graded).
			Visible to naked eye; very little or no cohesion; grading
	Coarse	0.6 - 2	can be described.
SANDS	Medium	0.2 - 0.6 1 0.06 - 0.2	May be well-graded or poorly-graded (uniform or
	Fine	0.05 - 0.2	gap-greded) as for grevel.
			Only coarse silt barely visible to naked eye; exhibits
	Coarse	0.02 - 0.06	little plasticity and marked dilatancy; slightly granular
SILTS	Medium	0.006 - 0.02	or sifky to the touch. Disintegrates in water, lumps
	l Fine	0.002 - 0.006	dry quickly; possesses cohesion but can be
			powdered easily between fingers.
			Dry lumps can be broken by hand but not powdered
			between the fingers. Disintegrates in water more
			slowly than silt; smooth to the touch; exhibits
CLAYS	_	< 0.002	slowly than sill; smooth to the touch; exhibits plasticity but no dilatancy, sticks to the fingers and dries slowly; shrinks eppreciably on drying, usually showing crecks. These properties more noticeable
			dries slowly, shrinks eppreciably on drying, usually
			showing crecks. These properties more noticeable
			with Increasing plasticity.
ORGANIC			
CLAYS,			Contains much organic vegetable matter; often has a noticeable smell and changes colour on oxidation.
SILTS OR	_	vanes	Unoticeable smell and changes colour on oxidation.
SANDS			
			Predominantly plant remains; usually dark brown or
PEATS	-	varies •	Predominantly plant remains; usually dark brown or black in colonr, often with distinctive smetl; low bulk density.
			C density.

B. Composite Soil Types (Mixtures of Basic Types)

			., .	
Principal Soil Type Very coarse (BOULDERS &	Terminology Sequence Secondary	ſ	Term for Secondary Constituent With a little	% of Secondary Constituent < 5
COBBLES) (> 50% of	constituents (finar material) ▲	1	With soma	5 - 20
sod > 60 mm)	after principal	ļ	With much	20 - 50
		1	' Slightly (silty, dayey	
		1	or siity/dayey) ♥ - (siity, dayey	< 5
			or silty/clayey) 🗖	5 - 15
Coarse	Secondary	-	Very (sility, dayey	
(GRAVELS &	constituents	1	or silty/dayey) ♣	15 - 35
SANDS)	before principal	1	AND/OR	
(> 65% gravel	(excluding cobbles	1	Slightly (grevelly	_
& sand sizes)	& boulders) +	ŀ	of sendy) * - (grevelly	< 5
		-	or sandy) *	5 - 20
		-	Very (gravelly	
		١	or sandy) *	20 - 50
E 1071 TC	Secondary	1	Slightly (gravetly	
Fine (SILTS	constituents	١	or sendy or	
& CLAYS)	before principal	≺	both) 未	< 35
(> 35% silt &	(excluding cobbles	١	 (graveliy 	
clay sizes)	& boulders) +	١	or sandy) 🏶	35 - 65

Full name of finer material should be given (see exemples below).

 Secondary soil type as appropriete; use 'silly/clayey' when e distinction cannot be made between the two.

+ If cobbles or boulders are also present in e coarse or fine soil, this can be indicated by using one of the following terms relating to the very coarse fraction after the principal; 'with occasional' (< 5), 'with some' (5-20), 'with many' (20-50), where figures in breckets are % very coarse material expressed as a fraction of the whole soil (see examples below).</p>

Examples: Slightly sithy/clayey, sandy GRAVEL. Slightly gravatly, sandy SILT. Very gravelly SAND. Sendy GRAVEL with occasional boulders. BOULDERS with much finer material (sity/clayey, very sandy gravel).

For fine sods, plasticity terms should also be described where possible, viz: 'non-plastic' (generally slits), 'intermediate plasticity' (lean clays), 'high plasticity' (fat clays).

7. DISCONTINUITIES

Full description of discontinuities, where necessary, should be made using the methods and tarms given in item 7 for rock description (see other side).

8, ADDITIONAL GEOLOGICAL INFORMATION

Record geological name which indicates geological origin or soil type (e.g. Alluvium, Colluvium, Marine sand etc.). Refer to HKGS maps & memoirs for further information.

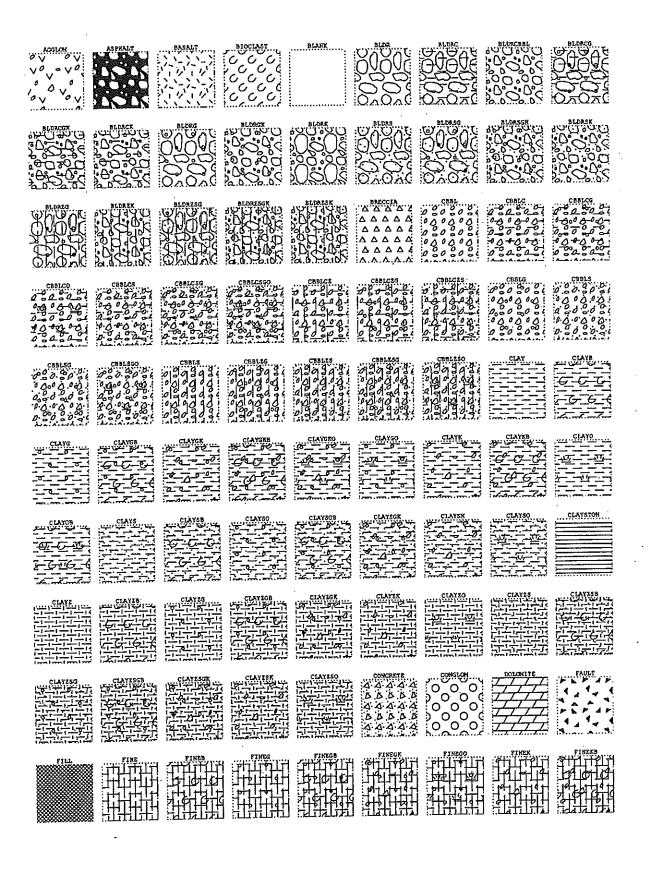

NOTES

- Mass characteristics of soils (i.e. structure, weathering, discontinuities) can only be described satisfactorily in undisturbed field exposures or large undisturbed samples.
- 2. For full descriptions of soils derived from insitu rock weathering:
 - (a) saprofites describe as rocks, supplemented by soil strength end soil name terms in brackets,
 - (b) residual soils describe as soils, supplemented by name of parent rock where apparent from field evidence.

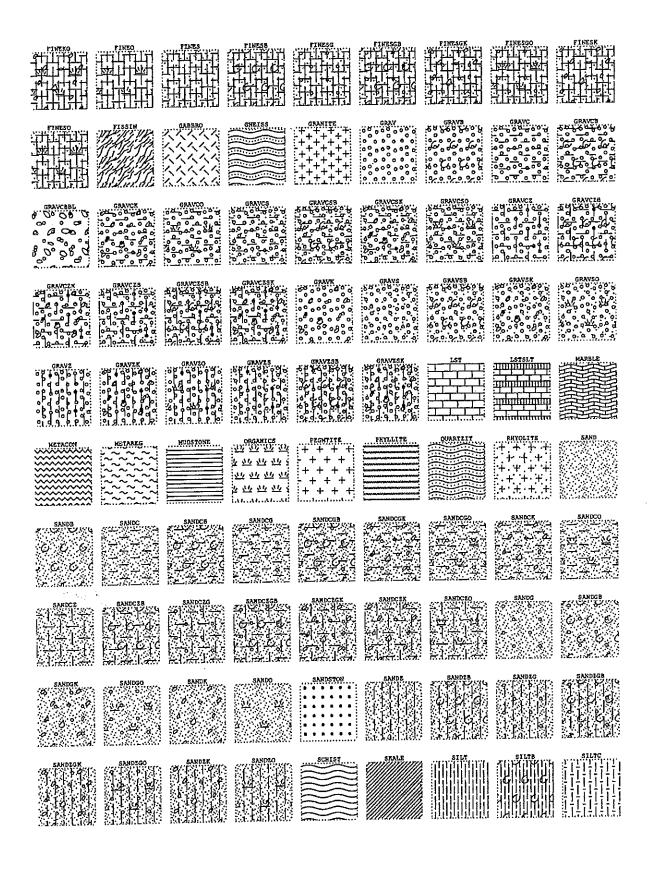

APPENDIX B Log Symbols and Classification Systems

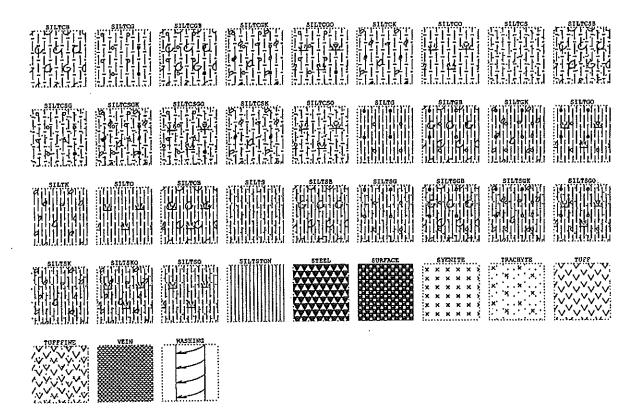

Material Code	<u>Description</u>	
ACCI OM	Agglomerate	
AGGLOM	Aggiotherate Asphalt	
ASPHALT	Aspiralit Basalt	
BASALT		
BIOCLAST	Shells	
BLANK	Material not recovered	
BLDR	Boulders	
BLDRCBBL	Boulders and Cobbles	
BRECCIA	Sedimentary Breccia	
CBBL	Cobbles	
CLAY	Clay	
CLAYSTON	Claystone .	
CONCRETE	Concrete	
CONGLOM	Conglomerate	
DOLOMITE	Dolomitic Limestone	
FILL	Artificial Fill	
FISSIN	Fissure Infill	
GABBRO	Gabbro, Lamprophyre	
GNEISS	Gneiss	
GRANITE	Granite	
GRAV	Gravel	
GRAVCBBL	Gravel and Cobbles	
LST	Limestone	
LSTSLT	Interbedded Limestone and Siltstone	
MARBLE	Marble	
	Metamorphic Rock – Contact	-
METACON	Metamorphic Rock – Contact Metamorphic Rock – Regional	
METAREG	•	
MUDSTONE	Mudstone	
ORGANICS	Organic, Peat	
PEGMTITE	Pegmatite	
PHYLLITE	Phyllite, Mylonite	
QUARTZIT	Quartzite	
RHYOLITE	Rhyolites	
SAND	Sand	
SANDSTON	Sandstone	
SCHIST	Schist (Medium – grained Metamorphic Rock)	
SHALE	Shale	
SILT	Silt	
SILTSTON	Siltstone	
SURFACE	Artificial Surfacing – Masonry, Stone/Brick	Pitching,
	Shotcrete and Chunam surface etc.	-
SYENITE	Granodiorite, Syenite, Monzonite	
TRACHYTE	Trachyte	
TUFF	Coarse Ash Tuff, Lapilli Tuff	
TUFFINE	Fine Ash Tuff	
TOT I THE	i me ron tan	

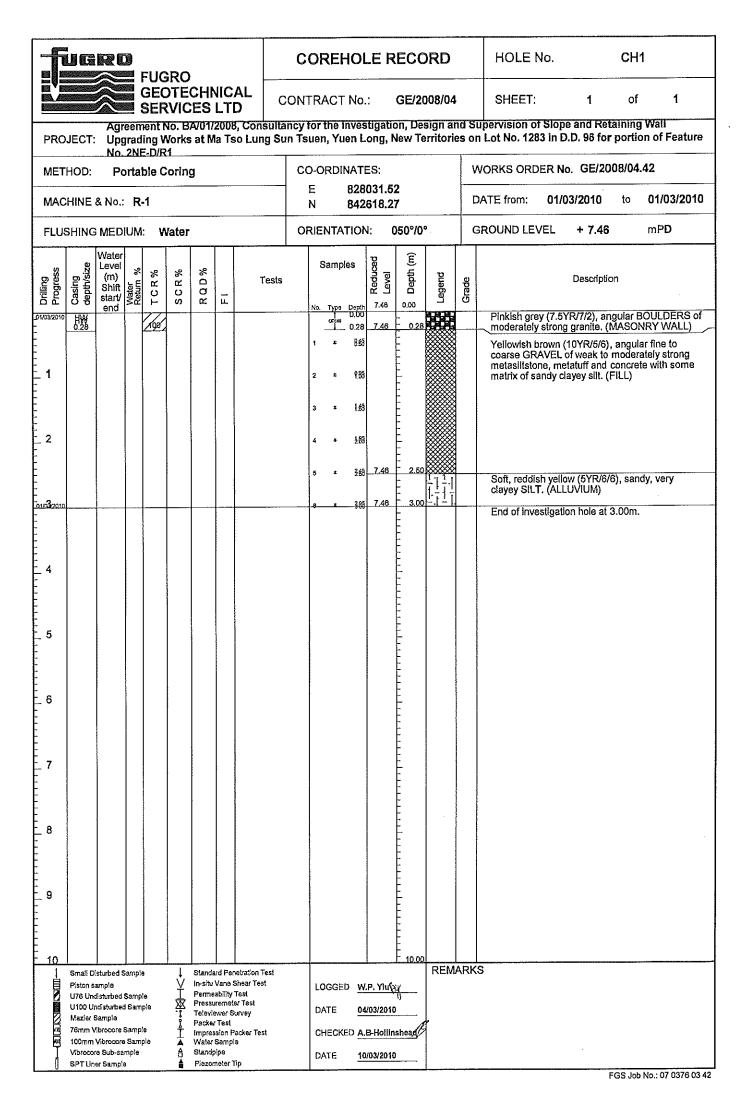

In common ground the following codes are added to the main description in the order stated below the denote secondary constituents:

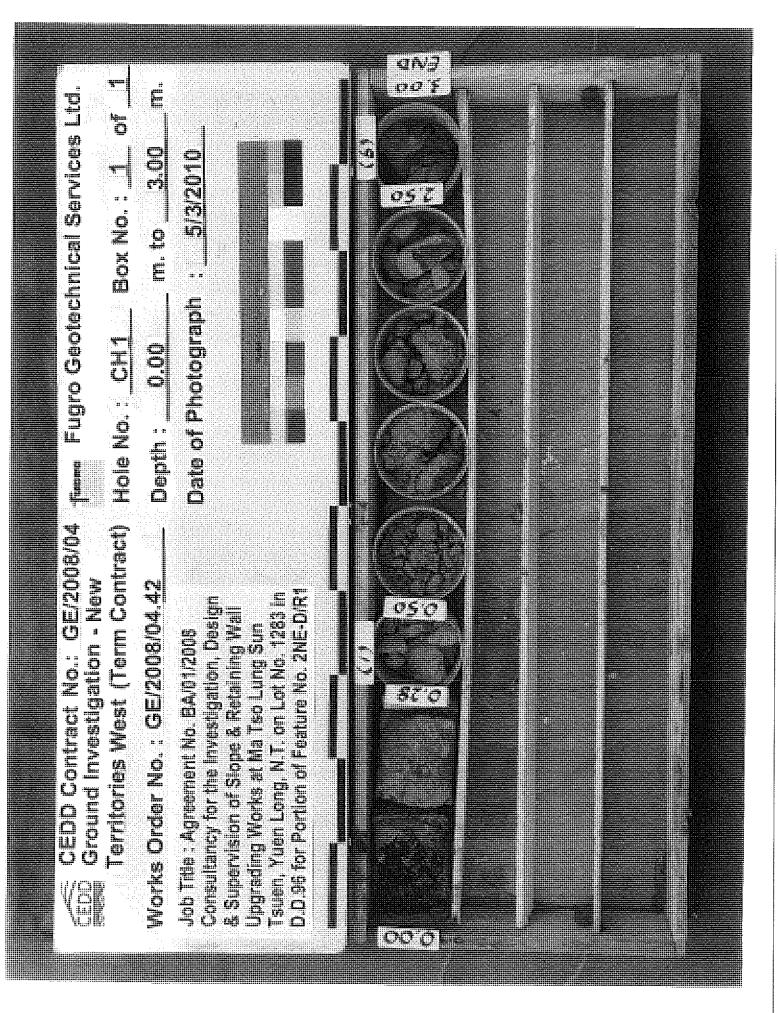

K - Cobbles O - Organic B - Shells C - Clay Z - Silt S - Sand (v) (vi) (vii) G - Gravel

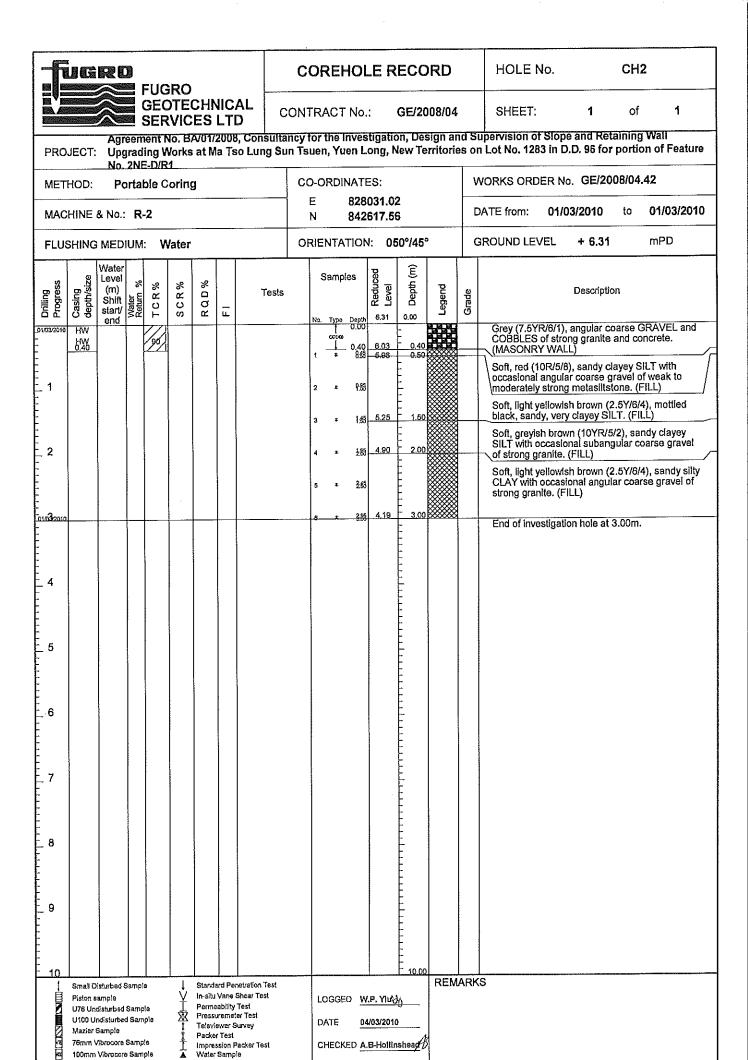

e.g. A silty CLAY with occasional shell and organic material is coded as CLAYZOB

APPENDIX E Record of Water Levels

Groundwater Level Record Sheet

Contract No:	GE/2008/04	Works Order No :	GE/2008/04.42
Project :	Retaining Wall Upgrad	/2008, Consultancy for the Invest ding Works at Ma Tso Lung Sun T of Feature No. 2NE-D/R1	igation, Design and Supervision of Slope and Fsuen, Yuen Long, New Territories on Lot No. 128
Drillhole No.	SP-1	Co-ordinates:	Season:
Instrument No.	Standpipe	Easting (m) 82	8029.01 Wet 1 Apr to 31 Oct
Installation Date	01/03/2010	Northing (m) 81	2621.70 Dry 1 Nov to 31 Mar
AGMD Level (mPD)	N/A		
AGMD S/N	N/A	Standpipe:	
Logger S/N	N/A	Top Level (mPD)	+8.06
Gauge Factor (psi/Digit)	N/A	Installed Tip Depth	
Thermal Factor (psi/°C)	N/A	from Top Level (m)	3.10
$R_0 (F^2 \times 10^{-3})$	N/A	Tip Level (mPD)	+4.96
T ₀ (°C)	N/A
