ANNEXES

1 INTRODUCTION

1.1 Background

1.1.1 To facilitate the future demand of the University community, a New Science Building is proposed within the Tuen Mun Campus of the Lingnan University. The proposed new building intends to provide more floor spaces for general education purpose, as well as to provide specialized spaces such as computer laboratories, lecture rooms, offices, acoustic laboratories and a museum/exhibition space.

1.1.2 The proposed new building is bounded by Wing On Plaza in the North, Leung Kau Kui Building in the East, and the Main Building in the West.

1.1.3 Ozzo Technology (HK) Limited is commissioned to undertake a Traffic Impact Assessment (TIA) Study, to assess the traffic impact to be induced by the academic building on the road network in the vicinity of the site.

1.2 Study Objectives

1.2.1 The objectives of the TIA study are as follows:

- To review the existing traffic situation of the surrounding road network;
- To estimate the potential traffic generations/attractions to be induced by the new building;
- To assess the future traffic situation of the surrounding road network;
- To appraise the potential traffic impact of the new building on the surrounding road network and to recommend improvement proposals, if required; and
- To advise on the internal transport arrangements.

1.3 Report Structure

1.3.1 Following this introductory chapter, this report is arranged as follow:

- Chapter 2 describes the proposed new building;
- Chapter 3 summarizes the existing traffic condition in the vicinity of the site;
- Chapter 4 provides traffic forecast in the future design year;
- Chapter 5 presents the traffic impact assessment results;
- A summary of the findings and conclusion of this TIA study are given in Chapter 6.

2 PROPOSED NEW BUILDING

2.1 Site Location and Study Area

2.1.1 The proposed new building is located within the campus of the Lingnan University in Tuen Mun, bounded by Wing On Plaza in the North, Leung Kau Kui Building in the East, and the Main Building in the West. Location of the new building and the proposed Study Area for this TIA Study is presented in **Figure 2-1**.

2.2 The Proposed New Building

2.2.1 **Table 2-1** summarizes the development parameters of the proposed new building.

Table 2-1 Development Parameters of the Proposed New Building

Parameters	Proposed
Total GFA	Approx. 11,000m^2
Design Capacity	858 persons (685 student +173 staff)

2.3 Vehicular and Pedestrian Access Arrangements

2.3.1 With the new building is located within the existing campus of Lingnan University, the building is generally connected to the internal road network of Lingnan University. **Figure 2-2** presents the proposed vehicular and pedestrian access arrangement for the new building.

2.3.2 As presented in **Figure 2-2**, an emergency vehicular access (EVA) is located at the eastern section of the building, which also acts as the vehicular connection for VIP traffic. Remaining pick-up / drop-off activities for the new building will be conducted at the existing internal road at the southeast side of the new building. **Annex A** presents the swept path analysis for the newly proposed EVA.

2.4 Proposed Parking and Loading/ Unloading Provisions

2.4.1 As there are no specific parking and loading / unloading requirements for universities in accordance to Hong Kong Planning Standard and Guidelines (HKPSG), provision of ancillary parking facilities should be designed based on users' requirements to meet operational needs.

2.4.2 The proposed new building will serve as a research and academic building within the current campus. With provision of current internal parking and loading / unloading facilities are sufficient to serve the operation of the university site, additional provision of parking facilities are generally not required for both options to meet operational needs. Loading and unloading arrangement (such as shared-use of loading / unloading facilities) will be further reviewed in further detailed design.

3 EXISTING TRAFFIC CONDITION

3.1 Existing Road Network

3.1.1 **Figure 2-1** shows the location of the proposed new building and the existing road network in the vicinity of the site.

3.1.2 Castle Peak Road – Lingnan, a dual-2 carriageway, is classified as a District Distributor which connects Castle Peak Road – Lam Tei in the north and Castel Peak Road – San Hui in the south. Acting as a part of the Castle Peak Road network, the capacity carriageway is currently serving considerable public transport services, with bus and GMB stops identified for section near Lingnan University.

3.1.3 Tuen Kwai Road is a single-2 carriageway connecting Fu Tai Estate in the east and Castle Peak Road – Lingnan in the west. Acting as a local road serving adjacent residential site and Lingnan University, bus and GMB stops are generally identified along the carriageway.

3.1.4 Fu Tei Road is a single-2 local carriageway (with a single lane configuration for section east of "Forward Living") connecting Castle Peak Road – Lingnan in the west. The captioned carriageway is currently connected to the southern vehicular entrance of Lingnan University campus.

3.2 Existing Public Transport Services

3.2.1 The area is well served by public transport services including MTR, franchised bus, Green Minibus and Red Minibus services. **Table 3-1** summarized the public transport services serving the area and **Figure 3-1** shows the locations of the bus/GMB stops in the vicinity of the site. MTR Siu Hong Station is located within a distance of about 750 meters (around 11 min walking time) as indicated in **Figure 3-1**.

Table 3-1 Public Transport Services in the Study Area

Route No.	Terminating Points		Remarks
Franchised Bus Services			
53	YOHO Mall (Yuen Long)	Tsuen Wan (Nina Tower)	Daily services every 25-35 mins
67M	Tuen Mun (Siu Hong Court)	Kwai Fong Station	Daily services every 5-20 mins
67X	Tuen Mun (Siu Hong Court)	Mong Kok East Station	Daily services every 7-25 mins
258P	Hung Shui Kiu (Hung Fuk Estate)	Lam Tin Station	Monday to Saturday services from 06:50 to 10:00, every 12-30 mins

Route No.	Terminating Points		Remarks
261	Fanling (Cheung Wah)	Tuen Mun (Sam Shing Estate)	Daily services every 15-30 mins
267X	Tuen Mun (Siu Hong Court)	Lam Tin Station	Weekday services at 07:25, 07:45
960A	Central	Hung Shui Kiu (Hung Fuk Estate)	Weekday services at 18:30
960C	Tuen Mun (Fu Tai Estate)	Causeway Bay (Victoria Park)	Weekday services at 07:00, 07:15
960S	Tuen Mun (Fu Tai Estate)	Causeway Bay (Victoria Park)	Monday to Saturday services from 07:10-08:00, every 10-15 mins
960X	Quarry Bay (King's Road)	Hung Shui Kiu (Hung Fuk Estate)	Weekday services from 17:30-19:30, every 10-15 mins
A33X	Tuen Mun (Fu Tai Estate)	Airport (Ground Transportation Centre)	Daily services every 20-25 mins
A33X*	Tuen Mun (Fu Tai Estate)	Cathay Pacific City	Daily services at 06:45, 07:45
E33P	Siu Hong Station (South)	Airport (Ground Transportation Centre)	Daily services every 12-45 mins
MTR Feeder Bus			
K51	Fu Tai	Tai Lam	Daily services every 5-20 mins
K51A	Fu Tai	So Kwun Wat Tsuen	Daily services from 07:00-20:00, every 30 mins
K58	Fu Tai	Castle Peak Bay	Monday to Saturday services from 06:30-20:00, every 8-25 mins
Green Minibus Services			
46	Fu Tai Estate	Tuen Mun Town Centre (Circular)	Daily services every 7-30 mins
46X	Fu Tai Estate	Tuen Mun Town Centre (Circular)	Daily services every 5-30 mins

3.3 Traffic Surveys

3.3.1 Comprehensive traffic surveys including vehicular count survey, pedestrian count survey, public transport surveys were conducted on 27 June 2024 (Thursday) between 07:00 to 10:00 (AM peak period) and 16:00 to 19:00 (PM peak period), **Table 3-2** provides a summary of the types of surveys being undertaken and the survey locations are shown in **Figure 3-2** and **Figure 3-3**.

Table 3-2 Summary of Comprehensive Surveys

Survey Type	Location	Figure	Survey Date	Data Collected
Vehicular Count Surveys	J1 to J6	Figure 3-2	2024-06-27 (Thursday)	Manual Classified count in 15 min intervals
	L1 to L4	Figure 3-2	2024-06-27 (Thursday)	Manual Classified count in 15 min intervals
Pedestrian Count Surveys	P1 to P7	Figure 3-3	2024-06-27 (Thursday)	Pedestrian flows in 5-min intervals
Bus / GMB Surveys	Bus/GMB Stop A to D	Figure 3-3	2024-06-27 (Thursday)	- Nos. of buses - Passenger boarding and alighting - Vehicle occupancy

3.4 Existing Vehicular Traffic Conditions

3.4.1 All vehicle flows in the subsequent analysis have been converted to passenger car unit (PCU) based on the PCU factors as indicated in Table 2.3.1.1 of Volume 2 of Transport Planning and Design Manual (TPDM) and shown in **Table 3-3**.

Table 3-3 Passenger Car Unit Conversion Factors

Vehicle Type	PCU Conversion Factor	
	Traffic Signal	Priority
Car / Taxi	1.00	1.00
Public Light Bus / Minibus	1.50	1.50
Light Goods Vehicle	1.50	1.50
Medium/ Heavy Goods Vehicle	1.75	2.80
Bus / Coach	2.00	2.80

Source: Table 2.3.1.1, Chapter 2.3, Volume 2, TPDM-2024

3.4.2 By applying the above PCU factors, vehicular traffic flows in PCUs are calculated and the AM peak hour (08:00 – 09:00) and PM peak hour (17:15 – 18:15) traffic flows on the road network in the vicinity of the site 2024 are shown in **Figure 3-4**.

3.4.3 Based on the 2024 observed peak hour traffic flows, the performances of the key junctions are assessed and the assessment results are indicated in **Table 3-4**. The junction layouts are included in **Annex B**. Detailed junction calculation sheets are given in **Annex C**.

Table 3-4 2024 Peak Hour Performance at Key Junctions

Jn. ID.	Location	Type	Capacity Index(1)	2024	
				AM Peak	PM Peak
J1	Castle Peak Road – Lingnan / Castle Peak Road – Lam Tei	Signal	RC	85.6%	100%+
J2	Lam Tei Interchange	Roundabout	DFC	0.61	0.50
J3	Tuen Kwai Road / Northern Access of Lingnan University	Priority	DFC	0.01	0.05
J4	Castle Peak Road – Lingnan / Tuen Kwai Road	Signal	RC	100%+	100%+
J5	Castle Peak Road – Lingnan / Fu Tei Road	Priority	DFC	0.12	0.13
J6	Fu Tei Road / Southern Access of Lingnan University	Priority	DFC	0.01	0.05

Notes: (1) The Capacity Index for Signal controlled junction is the Reserve Capacity (RC)
The Capacity Index for Priority Junction and Roundabout is Design Flow to Capacity Ratio (DFC)

3.4.4 The results of the junction assessments show that all the key junctions in the vicinity of the site operate within capacity during both the AM and PM peak hours in 2024.

3.4.5 Based on the 2024 observed peak hour traffic flows, the peak hour performance of the key links in the vicinity of the site are also assessed. The assessment results are indicated in **Table 3-5**.

Table 3-5 2024 Peak Hour Performances of Key Road Links

Link ID.	Section[1]	Direction	Design Capacity (veh/hr)	Flows (veh/hr)	2024	
					AM Peak	PM Peak
L1	Castle Peak Road – Lam Tei	NB	2800	Flows	806	993
				P/Df[2]	0.29	0.35
		SB	2800	Flows	1535	1090
				P/Df[2]	0.55	0.39
L2-1	Yuen Long Highway (Main Road)	EB	4700	Flows	3860	4280
				P/Df[2]	0.82	0.91
L2-2	Yuen Long Highway (Main Road)	WB	3000	Flows	2043	3069
				P/Df[2]	0.68	1.02
L2-3	Yuen Long Highway (Slip Road to Castle Peak Road – Lingnan)	WB	3000	Flows	1293	1013
				P/Df[2]	0.43	0.34
L3	Castle Peak Road – Lingnan (Section north of Fu Hang Road)	NB	1700	Flows	1249	973
				P/Df[2]	0.73	0.57
		SB	1700	Flows	358	309
				P/Df[2]	0.21	0.18
L4	Castle Peak Road – Lingnan (Section south of Fu Tei Road)	EB	1700	Flows	145	218
				P/Df[2]	0.09	0.13
		WB	1700	Flows	647	414
				P/Df[2]	0.38	0.24
L5	Fu Tei Road	EB	400	Flows	44	33
				P/Df[2]	0.11	0.08
		WB	400	Flows	22	48
				P/Df[2]	0.06	0.12

Notes: (1) Refer to Figure 3-2 for locations of the key links
(2) P/Df = Peak Hourly Flows/Design Flow Ratios (P/Df) for road links

3.4.6 The results show that the key road links in the vicinity of the site operate within capacity during peak hours in 2024, except Yuen Long Highway (L2-1, L2-2) during PM peak time.

3.5 Existing Pedestrian Flows

3.5.1 **Figure 3-5** shows the observed peak hour pedestrian flows along the main pedestrian routes on a normal weekday (07:00-10:00 and 16:00-19:00) for the AM and PM peak hour respectively).

3.5.2 The levels of services of the above key pedestrian links are assessed based on the highest 5-min pedestrian flows being observed during the survey period, with the results are presented in **Table 3-6** to **Table 3-8**.

Table 3-6 Existing Level of Services (LOS) of Pedestrian Footways

Location(1)	Effective Footway Width(2)	2024 Weekday		
		Peak 5-Min Flow	Peak Min Flows/Metre	Level of Service(3)
P1	2.5m	59	4.7	A
P2	1.5m	69	9.2	A
P4	2.5m	71	5.7	A
P5	2.65m	18	1.4	A
P7	2.12m	70	6.7	A

Notes:
(1) Refer to Figure 3-5 for locations of key pedestrian links
(2) Effective width = Actual width minus 0.5m shy zone
(3) LOS of footpath refers to Highway Capacity Manual 2000 Exhibit 18-3.

Table 3-7 Capacity Assessment on Cautionary Crossing

Location(1)	Crossing Width	Maximum Capacity(2) (ped/hr)	Demand (ped/hr)	Demand/ Capacity Ratio
P6 (2024AM)	4m	4800	336	0.070
P6 (2024PM)	4m	4800	684	0.143

Notes:
(1) Refer to Figure 3-5 for location of cautionary crossing.
(2) Capacity of pedestrian crossing in accordance with Table 3.7.2.1, Chapter 3.7, Volume 2, TPDM.

Table 3-8 Capacity Assessment on Signalized Crossing

Location(1)	W Crossing Width	PG (sec)	CT (sec)	GTP	PC(2) (ped/hr)	Demand (ped/hr)	Demand / Capacity Ratio
P3 (2024AM)	3.6m	25	118	0.212	1449	441	0.304
P3 (2024PM)	3.6m	25	118	0.212	1449	385	0.266

Notes:
(1) Refer to Figure 3-5 for location of cautionary crossing.

(2) Capacity of pedestrian crossing in accordance with Chapter 3.2.5, Volume 4, TPDM
where PG = Pedestrian Green + Flashing Green
CT = Cycle Time
GTP = Green time proportion (i.e. PG/CT)
PC = Pedestrian crossing capacity = K (1900) x GTP x W

3.5.3 Assessment results show that LOS A are achieved at all the key pedestrian links in the vicinity of the site, while the crossings are operating within capacity.

3.6 Public Transport Surveys

3.6.1 It is noted that visitors access the site are mainly by the bus services at the four nearby bus-stops along Castle Peak Road – Lingnan and Tuen Kwai Road. Hence, bus surveys were undertaken to record the amounts of bus trips and occupancies at the four nearby bus/GMB stops (with location shown in **Figure 3-3**). The peak hour bus trips and patronage results are shown in **Table 3-9**.

Table 3-9 2024 Weekday Peak Hour Public Transport Trips and Occupancies

Location[1]		Bus / GMB	Nos. of Trips	Passenger per hour					
				Total Carrying Capacity	Total Arrivals[2]	Alighting at stop	Boarding at stop	Total Departures[2]	Spare Capacity
Weekday AM Peak Hour (08:00 – 09:00)									
A	Castle Peak Road, Lingnan University (North Bound)	Bus	13	3,173	616	21	135	502	2671
		GMB	12	219	113	0	8	105	114
B	Castle Peak Road, Lingnan University (South Bound)	Bus	31	3,997	1339	115	17	1,437	2560
		GMB	15	270	258	2	0	260	10
C	Tuen Kwai Road, Beneville (East Bound)	Bus	27	3,208	500	0	169	331	2,877
		GMB	11	314	58	0	9	49	265
D	Tuen Kwai Road, Beneville (West Bound)	Bus	17	2,144	273	480	0	753	1,391
		GMB	13	241	209	0	0	209	32
Overall Bus			88	12,522	2,728	616	321	3,023	9,499
Overall GMB			51	1,044	638	2	17	623	421
Overall			**139**	**13,566**	**3,366**	**618**	**338**	**3,646**	**9,920**
Weekday PM Peak Hour (17:15 – 18:15)									
A	Castle Peak	Bus	32	4,095	1,065	66	117	1,014	3,081

Location[1]		Bus / GMB	Nos. of Trips	Passenger per hour					
				Total Carrying Capacity	Total Arrivals[2]	Alighting at stop	Boarding at stop	Total Departures[2]	Spare Capacity
	Road, Lingnan University (North Bound)	GMB	14	254	240	0	18	222	31
B	Castle Peak Road, Lingnan University (South Bound)	Bus	25	3,082	624	288	9	903	2,179
		GMB	10	184	117	6	0	123	61
C	Tuen Kwai Road, Beneville (East Bound)	Bus	13	1,607	588	0	254	334	1,273
		GMB	13	235	186	0	22	164	71
D	Tuen Kwai Road, Beneville (West Bound)	Bus	12	1,254	88	90	0	178	1,076
		GMB	9	380	108	2	0	110	270
Overall Bus			82	10,038	2,365	444	380	2,429	7,609
Overall GMB			46	1,053	651	8	40	619	434
Overall			**128**	**11,091**	**3,016**	**452**	**420**	**3,048**	**8,043**

Notes:
(1) Refer to Figure 3-1 for location of surveyed bus/GMB stops.
(2) Total passengers of arriving and departing buses/GMB

3.6.2 Survey results indicate a spare public transport capacity of around 9,920 passengers and 8,043 passengers for AM and PM peak respectively.

4 FUTURE TRAFFIC SITUATION

4.1 Design Year

4.1.1 The planned completion year of the proposed new building is 2028, hence, the "Design Year" for this TIA study is set as 2031, i.e. 3 years after the completion year.

4.2 Methodology

4.2.1 In forecasting the future traffic flows on the road network in the Study Area, references are made to the following sources of information which include:

- Historical traffic data from Annual Traffic Census (ATC);
- The forecast population and employment from the 2019-based Territorial Population and Employment Data Matrices (TPEDM) planning data published by Planning Department; and
- Committed and Planned developments in the Study Area.

4.2.2 The following steps are undertaken to derive the 2031 Peak Hour Reference Flows (i.e. without the proposed new building) and Design Flows (i.e. with the proposed new building):

2031 Background Flows = 2024 Observed Flows x annual growth factors

2031 Reference Flows = 2031 Background Flows + additional traffic generated by planned developments

2031 Design Flows = 2031 Reference Flows + additional traffic generated by the new building

4.2.3 In particular, the operation traffic impact to be induced by the proposed new building is assessed by comparing the 2031 Peak Hour Reference Traffic Flows against the 2031 Design Traffic Flows.

4.3 Historical Traffic Growth

4.3.1 To gain an understanding of the historical trends of traffic growth on the nearby road network, relevant traffic data over the 5-year period of 2017 to 2022 are extracted from the Annual Traffic Census (ATC) Reports for the ATC stations in the Study Area. **Table 4-1** describes the locations of the ATC stations and provides the corresponding traffic data.

Table 4-1 Average Annual Daily Traffic from Annual Traffic Census

Station	Road	Between		2017	2018	2019	2020	2021	2022	Average Growth Rate p.a.
5025	Yuen Long Highway	Hung Tin Rd INT	Lam Tei INT	121360	125230	126570	117560	123290	117820	-0.59%
				-	3.19%	1.07%	-7.12%	4.87%	-4.44%	
5202	Castle Peak Rd – San Hui	Chung Wong Toi INT	Fu Tei Rd	9010	10030	11350	10880	11320	10980	4.03%
				-	11.32%	13.16%	-4.14%	4.04%	-3.00%	
5296	Castle Peak Rd – Lingnan	Fu Tei Rd	Lam Tei INT	11100	11250	12140	11550	12120	11580	0.85%
				-	1.35%	7.91%	-4.86%	4.94%	0.85%	
5404	Tuen Mun Rd	Chung Wong Toi INT	Lam Tei INT	105650	108160	109220	103100	113690	109410	0.70%
				-	2.38%	0.98%	-5.6%	10.27%	0.70%	
Total				247,120	254,670	259,280	243,090	260,420	249,790	0.22%
				-	3.06%	1.81%	-6.24%	7.13%	-4.08%	

Source: 2017-2022 Annual Traffic Census (ATC) Reports published by Transport Department

4.3.2 As indicated in **Table 4-1**, an annual growth rate of 0.22% per annum on the road network in the vicinity of the site over the period from 2017 – 2022.

4.3.3 Reference is also made to the 2019-based Territorial Population and Employment Data Matrices (TPEDM) planning data published by Planning Department. **Table 4-2** presents the population and employment data in Northwest New Territories for 2019, 2026 and 2031.

Table 4-2 2019-Based TPEDM for Northwest New Territories

Category	2019	2026	2031	% Growth p.a. 2019 - 2031
Population	1,154,400	1,233,700	1,396,650	1.60%
Employment Places	292,350	320,850	393,100	2.50%
Total	1,446,750	1,554,550	1,789,750	1.79%

Source: 2019-based TPEDM published by Planning Department.

4.3.4 As shown in the table, the predicted growth of population and employment places in Northwest New Territories from 2019 to 2031 is approximately +1.79% per annum respectively.

4.4 2031 Background Traffic Flows

4.4.1 Taking into account the above factors, it is proposed to adopt an average growth rate of +1.79% per annum with reference to the growth of population and employment places in the area as shown in **Table 4-2** to estimate the 2028/2031 peak hour Background Traffic Flows in the Study Area.

4.5 2031 Reference Traffic Flows

4.5.1 According to the published information, **Table 4-3** presents a list of the planned and committed developments in the vicinity of the Study Area. The table also shows the estimated peak hour traffic to be generated by these developments.

Table 4-3 Planned Developments and Peak Hour Development Traffic

Location		Use	Traffic Flows (pcu/hour)			
			Weekday AM Peak		Weekday PM Peak	
			In	Out	In	Out
1	Tuen Mun Area 29 West, Tuen Mun, New Territories [A/TM/547]	PRH (1,020 flats) (1)	33	44	31	24
		Residential Care Homes for the Elderly (2,100m² GFA) (2)	2	2	3	4
		Clinic/ Community Health Centre	11	10	13	17
2	Site 1 and 1A, Tuen Mun Area 54, New Territories [A/TM/500] (3)	PRH (4,232 flats) (1)	138	183	127	100
		Retail (2,420 m² GFA) (1)	6	6	8	8
		Social Welfare Facilities (2) (1,060m² GFA)	1	1	1	1
		Kindergarten (1 no.)	10	10	10	10

Notes:

(1) AM and PM Peak Hour trip rates extracted from TPDM Volume 1, Chapter 3, Annex C.

(2) Trip generations and attraction extracted from TIA reports of respective approved planning applications (A/TM/499, A/TM/500 and A/TM/547)

(3) The traffic impact assessment for Tuen Mun Area 54 development is undertaken by Civil Engineering and Development Department (Agreement No.CE38/2011(CE)) in 2011, and was review and updated by Hong Kong Housing Authority for planning application A/TM/499 and A/TM/500 with increase of plot ratio.

(4) Information is extracted from district councils document: https://www.districtcouncils.gov.hk/tm/doc/2020_2023/en/committee_meetings_doc/dfmehc/23449/dfmehc_2023_002.pdf

(5) Trip generations and attractions are calculated based on TPDM Volume 1 Chapter 3, Appendix, Annex C, Table 1, lower limit of Public Housing (average Flat Size of 30 sqm)

(6) Information is extracted from district councils document: https://www.districtcouncils.gov.hk/tm/doc/2020_2023/en/dc_meetings_doc/23419/dc_2023_019.pdf

(7) Trip generations and attraction extracted from TIA reports of respective approved planning applications Y/TM-LTYY/11.

(8) Trip generations and attraction extracted from TIA reports of respective approved planning applications A/TM/530.

(9) Trip generations and attraction extracted from TIA reports of respective approved planning applications Y/TM-LTYY/10.

4.5.2 The additional development trips by the planned developments are then added to the 2028 / 2031 peak hour Background Traffic Flows to derive the 2028 / 2031 peak hour Reference Traffic Flows (i.e., without the Proposed Redevelopment) and the results are shown in **Figure 4-1**.

4.6 Development Trip Generations

Peak Hour Visitor Flows

4.6.1 With reference to the visitor survey conducted at the Lingnan University Tuen Mun campus on 27 Jun 2024, the visitor trips for the proposed new building is presented in **Table 4-4**.

Table 4-4 Visitor Trips for the Proposed New Building

Site	Observed Peak Hour Visitor Trips (visitors / hr)			
	Weekday AM (08:30-9:30)		Weekday PM (17:35-18:35)	
	In	Out	In	Out
Existing Lingnan University Tuen Mun Campus (No. 7302 persons)	443	60	49	154
	Observed Peak Hour Visitor Trip Rates (visitors / hr / persons)			
	Weekday AM	Weekday AM	Weekday AM	Weekday AM
	In	Out	In	Out
	0.061	0.008	0.007	0.021
Proposed New Building (No. 858 persons)	Estimated Peak Hour Visitor Trips (visitors / hr)			
	Weekday AM		Weekday PM	
	In	Out	In	Out
	53	**7**	**6**	**18**

Peak Hour Vehicular Flows

4.6.2 The proposed new building is an academic building to accommodate a total of 173 staffs. With reference to Traffic Generation Survey 2006 (Trip rate of Lingnan University), the estimated peak hour vehicular flows for the proposed new building are summarized in **Table 4-5.**

Table 4-5 Estimated Peak Hour Development Traffic

Development Type	Adopted Trip Rates				Vehicular Trips for the Site			
	AM Peak Trip Rate (pcu/no. of staffs)		PM Peak Trip Rate (pcu/no. of staffs)		AM Peak Hour Trip (pcu/hr)		PM Peak Hour Trip (pcu/hr)	
	In	Out	In	Out	In	Out	In	Out
University (No. of staffs = 173)	0.0191	0.0280	0.0559	0.0356	4	5	10	7
2-way Total					**9**		**17**	

4.6.3 With reference to **Table 4-5**, it is anticipated that the proposed new building would induce total two-way traffic of 9 pcu's (4 in and 5 out) and 17 pcu's (10 in and 7 out) in the AM and PM peak hour respectively. The peak hour development traffic flows are assigned to the road network in the Study Area as shown in **Figure 4-2**

4.7 Design Years Traffic Flows

4.7.1 By adding the peak hour development flows (**Figure 4-2**) onto the forecast 2031 Peak Hour Reference Flows (**Figure 4-1**), the 2031 Peak Hour Design Flows (i.e. with proposed new building) are derived and shown in **Figure 4-3**.

4.7.2 On the other hand, 2028 Peak Hour Flows with construction traffic in place are also derived and shown in **Figure 4-4**.

5 TRAFFIC IMPACT ASSESSMENT

5.1 Vehicular Traffic Impact Assessment

5.1.1 Based on the 2031 Reference Flows (i.e. without proposed new building) and 2031 Design Flows (i.e. with proposed new building), junction and link capacity assessments are undertaken and the results are presented in **Table 5-1** and **Table 5-2**. Detailed calculation sheets for junction assessments are also provided in **Annex D**.

Table 5-1 2031 Peak Hour Performance at Key Junctions

Jn. ID.	Location	Type	Capacity Index(1)	Reference		Design	
				AM Peak	PM Peak	AM Peak	PM Peak
J1	Castle Peak Road – Lingnan / Castle Peak Road – Lam Tei	Signal	RC	50.7%	100%+	50.6%	100%+
J2	Lam Tei Interchange	Roundabout	DFC	0.85	0.68	0.85	0.69
J3	Tuen Kwai Road / Northern Access of Lingnan University	Priority	DFC	0.01	0.05	0.01	0.06
J4	Castle Peak Road – Lingnan / Tuen Kwai Road	Signal	RC	86.4%	100%+	85.2%	100%+
J5	Castle Peak Road – Lingnan / Fu Tei Road	Priority	DFC	0.14	0.15	0.14	0.16
J6	Fu Tei Road / Southern Access of Lingnan University	Priority	DFC	0.01	0.05	0.01	0.06

Notes: (1) The Capacity Index for Signal-controlled junction is Reserve Capacity (RC)
The Capacity Index for Priority Junction and Roundabout is Design Flow to Capacity Ratio (DFC)

Table 5-2 2031 Peak Hour Performance at Road Links

				Flows	0.13	0.10	0.13	0.11
		WB	400	P/Df[2]	25	55	26	58
				Flows	0.06	0.14	0.07	0.15

Notes: (1) Refer to Figure 3-2 for locations of the key links
(2) P/Df = Peak Hourly Flows/Design Flow Ratios (P/Df) for road links

5.1.2 Assessment results for **Table 5-1** and **Table 5-2** indicate that the assessed junctions and links in the vicinity of the site would be operating within capacity during the AM and PM peak hour for both the 2031 Reference (without proposed new building) and Design (with proposed new building) scenarios, except Yuen Long Highway (L2-1, L2-2) with V/C operating between 1.0 and 1.2 during PM peak time.

5.1.3 With the development traffic contribution onto the section of Yuen Long Highway is minimal (less than 5 veh/hr), we consider the development traffic impact onto Yuen Long Highway is trivial. In long run, with reference to Highway's Department website (https://www.hyd.gov.hk/en/our_projects/road_projects/6888th/index.html), widening of the section of Yuen Long Highway is currently under consideration, thus leading to potential improvement of the critical road link.

5.1.4 To investigate the future traffic queue at Lam Tei Interchange, queuing assessment for J2 was conducted, with findings presented in **Annex E**. Assessment results indicate a sufficient queuing space at J2, even with the development traffic in place (with the development traffic only contribute a trivial queue onto the roundabout)

5.1.5 Therefore, it can be concluded that the traffic generated by the proposed new building would not cause adverse traffic impact to the road network in the vicinity of the site.

5.2 Pedestrian Assessment

5.2.1 Similar to vehicular traffic impact assessment, year 2031 is adopted as the design year for pedestrian assessment. To derive the background pedestrian flows for design year 2031, an annual growth factor of +1.79% was applied to the existing pedestrian flows to derive the 2031 peak hour background pedestrian flows.

5.2.2 The additional pedestrian flows by the proposed new building in Section 4.6.1 are then assigned onto the main pedestrian routes and the resulting 2031 Peak Hour Pedestrian Flows with the proposed new building in place are shown in **Figure 5-1**.

5.2.3 Based on the 2024 observed pedestrian flows, the peak 5-min flows are around 10-12% of the peak hour flows. To provide conservative assessment, a factor of 15% is applied to the peak hour pedestrian flows in **Figure 5-1** to derive the peak 5-min flows for the LOS assessment of the major pedestrian links in the vicinity of the site. The results are presented in **Table 5-3** to **Table 5-5**.

Table 5-3 2031 Level of Services (LOS) of Pedestrian Footways

Location(1)	Effective Footway Width(2)	2031 Reference Scenario			2031 Design Scenario		
		Peak 5-Min Flow	Peak Min Flows/M	Level of Service(3)	Peak 5-Min Flow	Peak Min Flows/M	Level of Service(3)
P1	2.5m	66	5.3	A	68	5.4	A
P2	1.5m	70	9.3	A	76	10.1	A
P4	2.5m	81	6.5	A	83	6.6	A
P5	2.7m	27	2.0	A	31	2.3	A
P7	2.1m	81	7.7	A	85	8.1	A

Notes:
(1) Refer to Figure 3-5 for locations of key pedestrian links
(2) Effective width = Actual width minus 0.5m shy zone
(3) LOS of footpath refers to Highway Capacity Manual 2000 Exhibit 18-3.

Table 5-4 2031 Capacity Assessment on Cautionary Crossing

Location(1)	Crossing Width	Maximum Capacity(2) (ped/hr)	Demand (ped/hr)	Demand/ Capacity Ratio
Reference Scenario				
P6 (2031AM)	4	4800	381	0.079
P6 (2031PM)	4	4800	775	0.161
Design Scenario				
P6 (2031AM)	4	4800	397	0.083
P6 (2031PM)	4	4800	784	0.163

Notes:
(1) Refer to Figure 3-5 for location of cautionary crossing.
(2) Capacity of pedestrian crossing in accordance with Table 3.7.2.1, Chapter 3.7, Volume 2, TPDM.

Table 5-5 2031 Capacity Assessment on Signalized Crossing

Location(1)	W Crossing Width	PG (sec)	CT (sec)	GTP	PC(2) (ped/hr)	Demand (ped/hr)	Demand / Capacity Ratio
Reference Scenario							
P3 (2031AM)	3.6	25	118	0.212	1449.153	500	0.345
P3 (2031PM)	3.6	25	118	0.212	1449.153	436	0.301
Design Scenario							
P3 (2031AM)	3.6	25	118	0.212	1449.153	545	0.376
P3 (2031PM)	3.6	25	118	0.212	1449.153	457	0.315

Notes:
(1) Refer to Figure 3-5 for location of cautionary crossing.
(2) Capacity of pedestrian crossing in accordance with Chapter 3.2.5, Volume 4, TPDM
where PG = Pedestrian Green + Flashing Green
CT = Cycle Time
GTP = Green time proportion (i.e. PG/CT)
PC = Pedestrian crossing capacity = K (1900) x GTP x W

5.3 Public Transport Capacity

5.3.1 With reference to Census 2021 (Table C204), percentage split of visitors using road based public transport services (i.e. bus and minibus) is 33.6%. For conservative, assume 35% of visitors for the site will travel via road based public transport service.

5.3.2 Based on the visitor flows derived from section 4.6.1, the anticipated peak hour public transport demand for the proposed building would be 25 (21 in and 4 out) visitors/hr during the AM Peak and 11 (3 in and 8 out) visitors/hr during the PM Peak.

5.3.3 To assess the sufficiency of existing public transport services, **Table 5-6** compares the anticipated additional public transport demand by the site against the spare capacities of bus services to be available during the peak hours. Similar to vehicular and pedestrian traffic, the 2031 bus occupancies are derived by applying an annual growth rate of +1.79% to the 2024 observed peak hour public transport patronage.

Table 5-6 Peak Hour PT Demand and Spare Capacities

	No. of Bus Trips	Total Capacity (Pax/hr)	Direction	2031 Occupancy (Pax/hr)	Spare Capacity (Pax/hr)	Demand for Public (2)	Demand for Proposed Building (3) (Pax/hr)
Weekday AM Peak	139	13,566	Arrivals	3,835(1)	9,731	Alighting 702	Alighting 19
			Departures	3,114(4)	10,452 (5)	Boarding 386	Boarding 3
Weekday PM Peak	128	11,091	Arrivals	3,421(1)	7,670	Alighting 514	Alighting 3
			Departures	2,904(4)	8,187 (5)	Boarding 478	Boarding 7

Notes: (1) 2031 Occupancy on arrival = 2024 Occupancy (Table 3-9) x (1+2.20%)^7 + New Building attraction (Table 4-4)
(2) 2031 Public Demand = 2024 total Alighting / Boarding (Table 3-0) x (1+2.20%)^7
(3) Refer to Table 4-4.
(4) 2031 Occupancy on departure = 2031 Occupancy on arrival – 2031 public alighting - New Building generation
(5) Spare Capacity = Total Capacity - Occupancy

5.3.4 **Table 5-6** indicates that, as the additional public transport demand is not significant, there would be sufficient public transport spare capacities to cope with the additional public transport demand

6 SUMMARY AND CONCLUSION

6.1 Summary

6.1.1 Ozzo Technology (HK) Limited is commissioned to undertake a Traffic Impact Assessment (TIA) Study, to assess the traffic impact to be induced by the research and academic building within the Tuen Mun Campus of the Lingnan University to the nearby road network in the site vicinity.

6.1.2 In order to appraise the existing traffic condition in the area, comprehensive survey including classified turning movement counts, pedestrian count and public transport occupancy were carried out over the AM and PM peak periods on 27 June 2024. Assessment results indicate that the assessed junctions and link are currently operating at a satisfactory condition, while the pedestrian facilities are operating within capacity, and spare capacity of existing public transport services are generally identified.

6.1.3 The planned completion year for the proposed new building is 2028 and hence the "Design Year" for this study is set as 2031, i.e. 3 years after the completion year. Having reviewed the historical trend of traffic growth in the area and the forecast development intensity in the area, to provide conservative estimates, a growth factor of +1.79% per annum is adopted for estimating the 2031 Background Traffic Flows.

6.1.4 Traffic impact assessments are undertaken by comparing the peak hour junction performances of the 2031 Reference scenario against the Design scenario. Assessment results indicate that all the assessed junctions and links in the vicinity of the site would perform within capacity during the AM and PM peak periods for both scenarios, except for Yuen Long Highway with V/C between 1.0 and 1.2 (L2-1, L2-2) during PM peak time.

6.1.5 With the development traffic contribution onto the section of Yuen Long Highway is minimal (less than 5 veh/hr), we consider the development traffic impact onto Yuen Long Highway is trivial. In long run, with reference to Highway's Department, widening of the section of Yuen Long Highway is currently under consideration, thus leading to potential improvement of the critical road link.

6.1.6 Therefore, it can be concluded that the traffic generated by the proposed new building would not cause adverse traffic impact to the road network in the vicinity of the site.

6.1.7 Assessment on pedestrian flows and public transport services also indicate that the current pedestrian facilities and public transport services are sufficient to cater for the future pedestrian and public transport demand.

6.2 Conclusions

6.2.1 Based on the results of the traffic impact assessment study, it is concluded that the proposed new building would not induce adverse traffic impact on the road network in the vicinity of the site.
