1. INTRODUCTION

1.1 Project Background

- 1.1.1 The Proposed Development is located at Residential Group B under the Draft Yuen Long Outline Zoning Plan (OZP) No. S/YL/26 which is designated for residential use. Below is the extract of the notes of the Yuen Long OZP for the use.

- 8 -

S/YL/26

RESIDENTIAL (GROUP B)

Column 1 Uses always permitted	Column 2 Uses that may be permitted with or without conditions on application to the Town Planning Board
Flat	Ambulance Depot
Government Use (Police Reporting Centre, Post Office only)	Eating Place
House	Educational Institution
Library	Government Refuse Collection Point
Residential Institution	Government Use (not elsewhere specified)
School (in free-standing purpose-designed building only)	Hospital
Utility Installation for Private Project	Hotel
	Institutional Use (not elsewhere specified)
	Off-course Betting Centre
	Office
	Petrol Filling Station
	Place of Entertainment
	Place of Recreation, Sports or Culture
	Private Club
	Public Clinic
	Public Convenience
	Public Transport Terminus or Station
	Public Utility Installation
	Public Vehicle Park (excluding container vehicle)
	Recyclable Collection Centre
	Religious Institution
	School (not elsewhere specified)
	Shop and Services
	Social Welfare Facility
	Training Centre

- 1.1.2 Under the Column 1, flat and residential institution "i.e. residential use" is always permitted to be constructed at the Subject Site. The plot ratio of the residential use under the OZP is 3.5 and with a maximum building height of 25 storeys (excluding basement car park). As such, existing residential development "Sereno Verde" is located immediate east of the Subject Site.

- 1.1.3 Figure 1.1 shows the location of the Subject Site and the surrounding developments.
- 1.1.4 During the land exchange application, as per the Transport Department's request, a strip of land along the Tai Shu Ha Road East has to be reserved as non-building area of the proposed development. This strip of land is reserved with a view not to jeopardizing the potential road widening works in the future, if necessary. Under current status, there is no planning for the road widening of Tai Shu Ha Road East from neither the Transport Department nor the project proponent.
- 1.1.5 Under this current planning application, the Applicant proposed to have 20% plot ratio relaxation, i.e. to have an additional 4 storeys increase from 20 storeys to 24 storeys.
- 1.1.6 Ramboll Hong Kong Limited (the Consultant) has been commissioned by the Applicant to conduct this noise impact assessment in relation to the planning application. Architectural drawings and technical information of the Subject Site were provided by project proponent.
- 1.2 Subject Site and its Environs
- 1.2.1 The Subject Site is located at the junction of Tai Tong Road and Tai Shu Ha Road East. The site is currently zoned as "Residential Group B (R(B))".
- 1.2.2 The Subject Site is bounded by road carriageways, Tai Tong Road to the north and Tai Shu Ha Road East to the southwest of the Subject Site. Tai Shu Ha Road West is located further southwest of the Subject Site; while Yuen Long Highway is located further south of the Subject Site. An existing residential development "Serenio Verde" is located to the northeast of the Subject Site.
- 1.2.3 Figure 1.1 shows the location of the Subject Site and the surrounding environs.
- 1.3 The Proposed Development
- 1.3.1 The Proposed Development will mainly comprise of 1 residential tower with 25 storeys (the maximum building height is 101 mPD). As shown in the section, club house and E/M use are located at ground floor and 1st floor. Residential storeys start from 2/F to 24/F.
- 1.3.2 Master layout plans and sections of the Proposed Development are shown in Appendix 1.1.
- 1.4 Environmental Appraisal of the Proposed Developments
- 1.4.1 Assessment on road traffic noise impact, industrial noise impact will be discussed in Sections 2 and 3 respectively.

2. ROAD TRAFFIC NOISE IMPACT ASSESSMENT

2.1 Introduction

- 2.1.1 This road traffic noise impact assessment is prepared to address potential road traffic noise impact on the noise sensitive uses of the Proposed Developments Site and to recommend mitigation measures, where necessary.

2.2 Assessment Criteria

- 2.2.1 Noise standards are recommended in Chapter 9, "Environment", of the Hong Kong Planning Standards and Guidelines (HKPSG) for planning against possible noise impact from road traffic, railway and aircrafts.
- 2.2.2 For the Proposed Development, only dwellings will rely on openable window for ventilation purpose. The clubhouse will be provided with air-conditioning system and will not be provided with any openable windows / openings for ventilation.
- 2.2.3 According to the guidelines, the criterion for road traffic noise impact on domestic premises (habitable rooms) is $L_{10(1\text{-hour})}$ 70dB(A). This criterion applies to uses which rely on openable windows for ventilation.

2.3 Assessment Methodology

- 2.3.1 In this assessment, the potential noise impact arising from nearby existing and future road carriageways on the development has been assessed. It involved the prediction of future noise impacts on Noise Sensitive Receivers (NSRs) arising from traffic flows along existing and future road carriageways situated within or in the vicinity of the Application Site. Calculation of predicted road traffic noise were based on the worst-case peak hour traffic flows projected within a 15-year period from the target completion date (Year 2028) of the Proposed Development. For worst-case scenario evaluation, the assessment year was chosen to be year 2043, which has the maximum forecasted traffic flow within the 15-year period. The year 2043 traffic forecast data is prepared by the project traffic consultant and attached in Appendix 2.1.
- 2.3.2 The U.K. Department of Transport's procedure "Calculation of Road Traffic Noise" (CRTN) has been applied to predict the hourly $L_{10(1\text{-hour})}$ noise levels generated from road traffic at selected representative NSRs. Practicable environmental mitigation measures have been recommended, where necessary. The predicted noise levels were compared with the relevant HKPSG noise criterion (i.e., $L_{10(1\text{-hour})}$ 70dB(A)).

2.4 Road Characteristics and Contribution

- 2.4.1 Appendix 2.1 presents the predicted 2043 peak hour traffic data (i.e., road speed, traffic volume and percentage of heavy vehicle) on the main road carriageways surrounding the Subject Site. Tai Kei Leng Road and Yuen Long Highway are considered to be the dominant road traffic noise sources contributing on the Proposed Development. All impervious road surfacing is assumed as bitumen except Yeun Long Highway, which is a concrete road speed limit of 50 km/h and 70 km/h are assumed for different roads. Existing noise barriers along Yuen Long Highway and Shap Pat Heung Road have also been included in the road noise model.

2.5 Noise Sensitive Receivers

- 2.5.1 All residential dwellings with openable windows/doors of habitable room (noise sensitive use) for prescribed ventilation purposes have been assigned with assessment points. All assessment points were taken at 1.2m above the floor and 1m away from the facade of openable windows in rooms of sensitive use.
- 2.5.2 Figure 2.1 shows the location of the representative NSRs of dwellings for road traffic noise impact assessment.

2.6 Road Traffic Impact Assessment Result (Base Case)

- 2.6.1 The predicted road traffic noise impact on the selected NSRs under base case scenario is presented in Appendix 2.2.
- 2.6.2 According to the results, noise exceedances are found at residential units under the base case scenario. Maximum predicted noise level is 75 dB(A), which exceeds the 70 dB(A) noise criterion as listed in HKPSG for residential units. Below section advise the mitigation measures recommended for the design of the proposed development.

2.7 Proposed Noise Mitigation Measures

- 2.7.1 The predicted maximum traffic noise level at the proposed development is 75 dB(A) as shown in Appendix 2.2. To address this road traffic noise exceedance on the noise sensitive uses, the following noise mitigation measures are proposed as design guideline for detailed typical layout development during detailed design stage. As OZP zoning of the Subject Site is Residential Group B, submission of the noise impact assessment for the detailed layout would be one of lease conditions.
- 2.7.2 Locations of the proposed noise mitigation measures for the road traffic noise impact assessment of Subject Site is shown in Figure 2.2.

Acoustic Window (Baffle Type) (AW(BT))

- 2.7.3 The baffle type acoustic window refers to the type of window that has a sliding glass panel behind an outer window, both readily openable, for creating an air gap for the supply of fresh air with noise mitigation effect. It comprises of two glazing –
- (i) the outer window system with side hung openable window; and
 - (ii) the inner sliding panel.
- 2.7.4 In accordance with the *Practice Note on Application of Innovative Noise Mitigation Designs in Planning Private Residential Developments against Road Traffic Noise Impact* ("Practice Note") on Application of Acoustic Windows (Baffle Type) in Planning Residential Developments against Road Traffic Noise Impact, noise reduction of 6 dB(A) can be achieved when AW(BF) is adopted at the proposed NSRs.

Enhanced Acoustic Balcony (Baffle Type) (EAB(BT))

- 2.7.5 Enhanced Acoustic Balcony (EAB) is specially designed balcony which adopt a combination of mitigation measures to further enhance the noise reduction ability of balcony. In this proposed development, the EAB (Baffle Type) which mentioned in the Practice would be adopted when applicable.
- 2.7.6 Similar to the acoustic window (baffle type) mentioned in the Section 2.7.2 above, the noise reduction mechanism of EAB(BF) is to prevent noise directly enter into indoor environment.

2.7.7 With reference to the EPD's Practice Note on Application of EAB (BF) in Planning Residential Developments against Road Traffic Noise Impact, the provision of EAB can achieve a sound attenuation up to 8 dB(A).

2.7.8 In this assessment, the provision of AW(BF) or EAB (BF) would be recommended for all recommended development sites.

Fixed Glazing with/without Maintenance Window

2.7.9 For those window façades that are not necessary to serve ventilation purpose yet exposed to adverse road traffic noise, Fixed Glazing with/without Maintenance Window is proposed. The fixed glazing of not less than 8mm will be equipped with well gasketed maintenance window with a removable handle or key lock system to ensure the maintenance window remains locked except for cleaning and maintenance purpose.

2.8 Assessment Result under Mitigated Scenario

2.8.1 With the application of the noise mitigation measures, no noise exceedance is found at Subject Site, i.e. 100% compliance rate. The predicted road traffic noise impact on the selected NSRs under mitigated scenario is presented in Appendix 2.3. The presented predicted noise level after adopting the noise mitigation measures does not necessarily represent the noise level at 1m from the external façade, but the equivalent noise level at 1m from the external façade after accounting the reduction in noise level inside the room offered by the noise mitigation measures.

2.9 Conclusion

2.9.1 The assessment results indicate that the HKPSG road traffic noise standard can be met at all representative NSRs in the Proposed Developments with the application of the proposed mitigation measures. As OZP zoning of the Subject Site is Residential Group B, submission of the noise impact assessment for the detailed layout would be one of lease conditions.

3. INDUSTRIAL NOISE IMPACT ASSESSMENT

3.1 Introduction

3.1.1 The aim of this study is to assess potential noise impacts on the Proposed Development arising from the existing and planned fixed noise sources. Practicable noise mitigation measures would be recommended where necessary.

3.2 Assessment Criteria

3.2.1 In accordance with ProPECC PN4/93 "Planning and Design Noise Sensitive Developments", the design of the noise sensitive developments near noise sources such as railways and industrial premises are controlled under the Noise Control Ordinance (NCO). Reference has been made to the "Technical Memorandum For The Assessment Of Noise From Places Other Than Domestic Premises, Public Places Or Construction Sites" (IND-TM) issued under the NCO, the airborne noise shall comply with the Acceptable Noise Level (ANL), which depends on the Area Sensitive Rating (ASR).

3.2.2 According to the IND-TM, four (4) types of areas are defined and including: Rural Area, Low Density Residential Area, Urban Area and Area Other Than Those Above. The Subject Site is located in Teun Long area and considered not rural, low density residential or urban. No Influencing Factor (IF) is situated within 300m of the Application Site. Therefore, the NSRs of the Proposed Development are assigned with an ASR of "B". The corresponding Acceptable Noise Levels (ANLs), in Leq (30min) dB(A), during day & evening-time and night-time periods are shown in Table 3.1.

Table 3.1 Acceptable Noise Levels

Time Period	ANL (ASR of "B"), Leq (30min) dB(A)
Day (0700 to 1900 hours)	65
Evening (1900 to 2300 hours)	
Night (2300 to 0700 hours)	55

3.3 Industrial Noise Sources

3.3.1 According to the desktop study and site survey conducted in Sep 2023, there are some enclosed workshops located in the area. Residential premises in terms of village houses and middle-rise residential developments are also surrounding these enclosed workshops. Location of potential industrial noise sources in 300m assessment area is shown in Appendix 3.1 and summarized in Table 3.1 3.2

Table 3.2 Potential Industrial Noise Sources

Noise Source	Observations	Source ID
恆香蓮蓉廠	<p><u>General Description and Characteristics</u> As observed from site surveys, the plant is enclosed without any opening at the top and sides. The main openings were located at the entrance / exit in front of Tai Shu Ha West Road.</p> <p><u>Time Period of Operation</u> No daytime and night-time operation were being observed.</p>	S1

Tai Sang Feeds Co., Ltd	<p><u>General Description and Characteristics</u> As observed from site surveys, the plant is enclosed without any opening at the top and sides. The main openings were located at the entrance / exit in front of Tai Shu Ha West Road.</p> <p><u>Time Period of Operation</u> No daytime and night-time operation were being observed.</p>	S11

3.4 Potential Fixed Noise Sources of Proposed Development

3.4.1 As per the Technical Memorandum on Environmental Impact Assessment Process, the following requirement are adopted as further specification to the noise criteria.

- (1) 5 dB(A) below the appropriate ANLs in the IND-TM
- (2) The prevailing background noise levels

3.4.2 More details of the proposed development shall be available during detailed design stage. Nevertheless, in order to ensure the fixed noise generated by the Proposed Development would not cause excessive impact to neighbouring noise sensitive uses, potential noise sources from the proposed development (e.g. plant room, the ventilation and air conditioning systems for the carpark, pump rooms, transformer rooms, lift machine room, emergency set rooms, etc.), will be designed to meet the relevant noise criteria as stipulated in the HKPSG.

3.4.3 Provisions shall be made to control the noise sources by suitable silencers, acoustic louvers and enclosures, if necessary. As such, it is anticipated that the fixed noise impact on the surrounding NSRs due to the operation of the Proposed Development will not exceed the relevant noise standard of the HKPSG.

3.5 Conclusion

3.5.1 Since the workshops in the vicinity are enclosed, i.e. the industrial activities are carried out at indoor, any noisy activities carried out due to the industrial activities would be shielded by the building structure. Thus, the Proposed Development is not subject to adverse fixed noise impact.

3.5.2 In order to avoid adverse noise impact of the future fixed noise sources onsite on the surrounding NSRs, the future contractor shall ensure that the equipment within the Proposed Development would be designed and installed to meet the HKPSG criteria and the NCO.

4. OVERALL CONCLUSION

- 4.1.1 Environmental noise impacts on the Proposed Development have been appraised and quantitatively assessed.
- 4.1.2 The potential road traffic noise impact to the Proposed Development has been assessed. With the recommended noise mitigation measures in place (i.e., acoustic window (baffle type), enhanced acoustic balcony (baffle type) and fixed glazing with/without maintenance window), the Proposed Development would not be subject to adverse road traffic noise impact.
- 4.1.3 For Industrial Noise, according to the desktop study and site survey conducted in Sep 2023, there are some enclosed industrial workshops in the surroundings. Since the workshops in the vicinity are enclosed, i.e. the industrial activities are carried out at indoor, any noisy activities carried out due to the industrial activities would be shielded by the building structure. Thus, the Proposed Development is not subject to adverse fixed noise impact.

In addition, as the nature of the Proposed Development is for residential use only, there is no industrial activity allowed. The ventilation system will be designed to follow the recommendation in the HKPSG (acceptable noise level minus 5dB(A) or prevailing background whichever is lower) to ensure that there will not be any adverse fixed noise impact arising from its operation.
