| <p><u>Comments from Kowloon District Planning Office, Planning Department:</u> (Contact Person: Ms Charlotte NG Tel: 2231 4970)</p> <p><u>General comments:</u></p> <ol style="list-style-type: none"> The application involves rezoning of the application site (the Site) from “OU(B)” to “Other Specified Uses” Annotated “Residential Care Home for the Elderly and Hotel” (“OU(RCHE and Hotel)”) to facilitate a composite development of RCHE and hotel. To effectuate the proposal, the applicant proposes to designate the Site as “OU(RCHE and Hotel)” and intensify the development restriction of the Site by stipulating a maximum total GFA of 16,586.323m² (equivalent to a plot ratio (PR) of 14.4 (+2.4, +20%) with a site area of 1,170.578m²) comprises of 12,000m² for ‘Social Welfare Facilities’ (SWF) (RCHE) and 4,586.323m² for ‘Hotel’; and a maximum building height (BH) of 115mPD (+15m, +15%). Subsequently, the Notes of “OU(B)” zone is amended by stipulation of SWF and hotel uses under Column 1 at land designated “OU(RCHE and Hotel)” on the OZP. To designate the site as “OU(RCHE and Hotel)” amid Kwun Tong Business Area where all the land are zoned “OU(B)” and “Commercial (1)” in which are <i>“intended primarily for general business uses. A mix of information technology and telecommunications industries, non-polluting industrial, office and other commercial uses are always permitted in new “business” buildings. Less fire hazard-prone office use that would not involve direct provision of customer services or goods to the general public</i> | <p>Noted.</p> <p>The applicant understood that designation of a new “OU(RCHE and Hotel)” zone would limit the application site to only two uses. This demonstrates that the Applicant is determined to provide RCHE and Hotel uses at the Subject Site instead of a conventional commercial/office development. The Proposed Development not only could provide much-needed social welfare facility to the society, this also demonstrates how</p> |

|--|--|------|------|------|------|------|------|------|------------------------------------|-----|-----|-----|-----|-----|------|
| <p><i>is always permitted in existing industrial or industrial-office buildings”. Your proposed designation of a new “OU(RCHE and Hotel)” zone, from “OU(B)”, limits the application site to only two uses. This means commercial uses that are currently permitted as of right would no longer be allowed at the Site if the current application is approved. Besides, instead of providing flexibility for lot owners to modify commercial uses based on market demand, it constrains their options. Please provide strong justification for this designation. Since updated technical assessments could validate the feasibility of various commercial uses, explain why the applicant/consultant chose not to update these assessments. [It is observed that the applicant adopted <u>the indicative scheme as the ONLY scenario when conducting relevant technical assessments in the traffic, environmental and sewerage aspects.</u>]</i></p> | <p>the current landowner responds to the declining economic viability of commercial/office use in Kwun Tong.</p> <p>According to the Property Market Statistics on private office published by the Rating and Valuation Department in 2025, it should be highlighted that average rent of Grade A office in Kowloon Bay and Kwun Tong was decreased by about 20% in the past years, from \$397/m² per month in 2019 to \$316/m² per month in 2024 (Table 1 refers).</p> <p>Table 1 Average Rents of Grade A Private Office in Kowloon Bay and Kwun Tong from 2019 to 2024</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="text-align: left;">Year</th> <th style="text-align: center;">2019</th> <th style="text-align: center;">2020</th> <th style="text-align: center;">2021</th> <th style="text-align: center;">2022</th> <th style="text-align: center;">2023</th> <th style="text-align: center;">2024</th> </tr> </thead> <tbody> <tr> <td style="text-align: left;">Rent (\$/m² per month)</td> <td style="text-align: center;">397</td> <td style="text-align: center;">366</td> <td style="text-align: center;">350</td> <td style="text-align: center;">355</td> <td style="text-align: center;">331</td> <td style="text-align: center;">316*</td> </tr> </tbody> </table> <p><i>*Data available till November 2024</i></p> <p>From a macroeconomic perspective, many business sectors worldwide have experienced a notable downward trend in occupancy rates of offices use in recent years, partly due to the increasing trend of flexible working practices such as “work from home”. According to the Legislative Council’s publication of “Promotion of the second core business district in selected cities” in 2024, the overall vacancy rate of global office space has surged from around 11% in 2019 to nearly 17% as at second quarter of 2024. In particular, the average office vacancy rate in London and New York has been on a steady uptrend over the past five years, rising to 9.7% and 14.6% respectively in 2023. All policy makers around the world are facing similar challenge to fill up vacant office space amidst changing pattern of working mode. It also suggested that the approach of building</p> | Year | 2019 | 2020 | 2021 | 2022 | 2023 | 2024 | Rent (\$/m ² per month) | 397 | 366 | 350 | 355 | 331 | 316* |

| Comments | Summary & Response/Action |
|----------|--|
| | <p>it is in fact located at the centre of a dumbbell bar that connects Kwun Tong Business Area and Kowloon Bay Business Area. Focuses have been given to these business areas and the Action Areas. Figure B has demonstrated this phenomenon; The application site is away from EKEO’s project areas, such as the action areas in Kowloon Bay and Kwun Tong, Government Departments’ Office, back-alley improvement projects, as well as new establishments for art, cultural and creative activities, the site and its surrounding area are relatively remote from the core business areas in Kwun Tong and Kowloon Bay.</p> <p>All the above reveal that the application site and its surrounding are not a prime location for business use and has the potential for a mixed land use, especially when there are excess office supplies in an economic downturn. As such, the rezoning proposal would not jeopardize intention of OU(B) zone for general business use, as it is located in the fringe of Kowloon Business Area and Kwun Tung Business Area.</p> <p>While the proposed “OU(RCHE and Hotel)” zone would only allow RCHE and hotel uses with a maximum gross floor area (GFA) of 12,000m² for RCHE and 4,586.323m² for hotel only, the applicant has undertaken various technical assessments to demonstrate the worst-case scenario for the Proposed Development (i.e. 644 RCHE beds (based on 9.5m² for each resident under the latest version of the Code of Practice for Residential Care Homes (Elderly Persons)) instead of 557 RCHE beds as proposed by the applicant). It is concluded that the Proposed Development is technically feasible in the aspect of traffic, environmental and sewerage aspects.</p> |

**Proposed Rezoning of the Site from “Other Specified Uses” annotated “Business” to “Other Specified Uses” annotated “Residential Care Home for the Elderly and Hotel”
for a Proposed Composite Development with RCHE and Hotel
at Nos. 107 – 109 Wai Yip Street, Kwun Tong**

(Planning Application No. Y/K14S/4)

| Comments | Summary & Response/Action |
|---|--|
| <p>3. With reference to the draft Notes as submitted and the key parameters on Table 3.1, the application site will be limited to social welfare facility (RCHE) and hotel use, please clarify the proposed shop use facing Wai Yip Street according to the G/F floor plan.</p> | <p>Subject to later detail design stage, please note that the shop on G/F is ancillary to hotel use.</p> |
| <p>4. Paragraph 3.1.2 and Table 3.1 on Key Development Parameters and Paragraph 5.10.3 - it is noted that the proposed number of RCHE bed space is not less than 302 while 557 is the maximum number of RCHE bed spaces under the proposed scheme. It is very confusing to understand. Please clarify the rationale for adopting two scenarios, or if it is your intention to provide in a range so to allow flexibility for final design of the proposed development. Please specify how many rooms are provided at the RCHE portion. Additionally, please specify which scenario (302 or 557 beds) the submitted floor plans are based on, and provide the average space per resident (elderly) for both scenarios.</p> | <p>While the Applicant understands that the more beds the better in terms of meeting the strong demand for RCHE bed spaces, maximising the number of bed space can only be done by compromising the average space per resident. The Applicant intends to provide a quality living standard to the residents, therefore aims at providing 302 beds to allow an average of 20.3m² per resident. To allow future design flexibility and provide a range of different affordable types of services/bed spaces, the Applicant also states the absolute maximum number of bed (i.e. 557 beds with an average of 11m² per resident; still above the minimum required by SWD) to demonstrate the capability of the Site to hold this maximum number of bed.</p> <p>The floor plans submitted under the current rezoning application, as per the Guidance Notes on Applications for Amendment of Plan under Section 12A prepared by the Town Planning Board, “are for reference only.</p> |
| <p>5. Upon checking, a total of 644 beds have been assumed for sensitively testing for the submitted technical assessments, which is based on the minimum space per bed requirement for nursing home and attention home under the Residential Care Home (Elderly Persons) Regulation [while not specified but should be 9.5m² for each resident].</p> | <p>Correct. This is being adopted in the technical assessments to demonstrate a ‘worst-case-scenario’ only; at this stage, the Applicant has no intention to pursue a scheme that would provide 644 beds by compromising the average space per resident.</p> |

**Proposed Rezoning of the Site from “Other Specified Uses” annotated “Business” to “Other Specified Uses” annotated “Residential Care Home for the Elderly and Hotel”
for a Proposed Composite Development with RCHE and Hotel
at Nos. 107 – 109 Wai Yip Street, Kwun Tong**

(Planning Application No. Y/K14S/4)

| Comments | Summary & Response/Action |
|---|---|
| <p>6. Furthermore, according to the Appendix 1 Indicative Development Scheme, it provides RCHE typical floor plans and hotel typical floor plans, please also provide the RCHE and hotel typical floor plan with room layout for our consideration. Please also supplement the number of elderly in each room.</p> | <p>Please refer to the revised drawing no. SK-7B for typical room layout for RCHE and number of elderly in each room.</p> <p>Please refer to the revised drawing no. SK-9 for typical room layout for hotel.</p> |
| <p>7. Please provider clarification to justify your claim for relaxation of PR and BH in warranting deviation from the development restrictions at the Site on the OZP. In this connection, please clarify your claim in paragraph 2.8 for the redevelopment of the application site is in line with the policy initiative of revitalization of industrial building and elaborate why is the current proposal, which is mainly for RCHE, is in line with the Policy which advocates eligible IBs to commercial and non-polluting industrial purposes.</p> | <p>Paragraph 2.8 has been removed. However, for the sake of better utilising land resource and to provide more RCHE bedspace to meet the imminent demand, the Applicant proposes to seek minor relaxation of PR and BH restrictions from TPB. With reference to the approved planning application (No. A/K14/780), the building height of 115mPD and plot ratio of 14.4 is considered acceptable by TPB considering its prominent location of the Site at the waterfront. Within the same street block bounded by Wai Yip Street and Tai Yip Street, some other approved planning applications (Nos. A/K14/822 and A/K14/809) were also approved for 119.5mPD. As such, the building height of the Proposed Development is considered compatible with the building height profile of the area. Moreover, as demonstrated in the Visual Impact Assessment, it is unlikely that the Proposed Development would induce significant adverse effects on the visual character of the townscape.</p> |
| <p>8. It is observed from the floor plans that two separate set of lifts and stairs provided at the northwest corner and southeast corner serving the hotel and RCHE uses respectively. In particular, it appears that the set of lifts at the northwest corner (connecting to the hotel entrance) can serve the RCHE floors well. Please clarify if those lifts are restrictive to serve their individual uses or they will be shared.</p> | <p>Subject to later detail design stage and future operation needs, the intended lifts arrangement is as follows: -</p> <ol style="list-style-type: none"> 1. The three (3) lifts at southeast corner serve RCHE floors; 2. The two (2) lifts at northwest corner serve hotel floor; and 3. One lift at northwest corner serves as Fireman’s Lift. Hence, it shall reach every floor in the building. |

| <p>(v) proposed general layout of the development to demarcate road / footpath area if any; and</p> | <p>The block plan and ground floor layout plan are provided in the newly added Appendix 1.1 of the SIA Report (Appendix III refers).</p> |
| <p>(vi) boundary of the concerned land lot, area (e.g. set back) to be surrendered to the government, and proposed drainage reserve area inside the lot (if any)</p> | <p>There is no land proposed to be surrendered to the government or designated as drainage reserve at the Application Site.</p> |
| <ul style="list-style-type: none"> • For any pipes (including existing connection pipes from the lot) proposed to be abandoned / modified / constructed, please present with proper legends/colors to distinguish for clarity. | <p>The Site has been cleared and is currently vacant. No sewers are required to be abandoned or modified. The indicative location of the new terminal sewer manhole (P1) is shown in Figure 2.1.</p> |
| <ul style="list-style-type: none"> • Please indicate pipe sizes and manhole details (ref nos., invert levels, etc.) in the layout. | <p>The required information has been indicated in Figure 2.1.</p> |
| <p>3. Further to 2 above, you are reminded in particular to clarify in your report and illustrate clearly with layout, any existing terminal manholes and downstream connection pipes are proposed to be abandoned by the development at the cost of the developer, and any new ones proposed to be constructed by the development.</p> | <p>The construction of new manhole and connection to the public sewerage system will be at the cost of the developer. Such statement has been added to Section 2.3.2.</p> |
| <p>4. Please be reminded that the project proponent is responsible to verify and evaluate if there are existing drainage and sewerage connection(s) from the site to the public network, and if the connection pipes and downstream government drains and sewers are in normal working conditions and capable to take up the discharge from the proposed development. Condition survey of existing drain/sewer, covering at least two sections downstream of each proposed connection, should be conducted prior to works commencement. Pipe cleansing and rehabilitation works (if found necessary upon survey result) should be implemented by the project</p> | <p>Noted. Condition survey will be conducted during detailed design stage.</p> |

|---|---|
| <p>impact in respect of sustaining the Kwun Tong Business Area will have to be duly assessed.</p> | <p>has been strategically chosen for its suitability for RCHE use, benefiting from a convenient location that ensures accessibility for both residents and their families. It is well-served by a variety of public transport options, including road-based franchised buses and public light buses, as well as rail-based services. All of these transport options are within a 500-meter radius, which translates to about a 10-minute walk, making it easy for residents to access essential services and enabling families to visit frequently.</p> <p>In addition, Hoi Bun Road Park and Kwun Tong Promenade are located in front of the Site. It has an open vista with spectacular view towards the water, Kai Tak Runway Precinct and even towards Hong Kong Island.</p> <p>While the Application Site is located at the southern periphery of KTBA, it is expected that the problem of I/R interface would be limited as it is facing Hoi Bun Road Park and Kwun Tong Promenade is located in close proximity. According to the “2020 Area Assessments of Industrial Land in the Territory”, majority (70.9%) of the GFA within the “OU(B)” zone in KTBA are occupied by office (39.9%) and warehouse/storage (31.0%) uses; whereas, only 8% of the total GFA is being used for manufacturing/workshop. As such, very limited nuisances from adjoining buildings would be anticipated (please also refer to the submitted Environmental Assessment).</p> <p>Notwithstanding, only non-polluting uses (e.g. information technology and telecommunications industries, non-polluting industrial, office and other commercial uses) are permitted as-of-right within “OU(B)” zone. Coupled with the increasing numbers of planning application for hotel and shop and services uses at the IB cluster north of Wai Yip Street, further restructuring of land use to general commercial and non-polluting uses</p> |

| | <p>would be anticipated. Chances of having conflict between the operation of the proposed RCHE and hotel uses would eventually be further reduced.</p> <p>More importantly, proximity to workplaces can reduce travel time and make it convenient for younger generation to visit their elderly family members during breaks or after work, fostering “Youth in Elderly”. It also provides opportunities for social interaction and engagement for both the residents and the workers. Workers can visit during lunch breaks or after work, fostering a sense of community. At the same time, being located at an active and vibrant location, the elderlies may also be able to get a sense of the lively and energetic society that they previously devoted in so as to reduce social isolation.</p> <p>Not least, Hong Kong Baptist Hospital (HKBH) has started operating the HKBH East Kowloon Medical Centre since 30 December 2024 in close proximity within the same street block, and take up the building directly located next to the application site for their operation use. As such, the proposed RCHE use could enjoy the synergy with the planned facilities of HKBH (Figure A refers).</p> |
| <p><u>Comments from Labour and Welfare Bureau and Social Welfare Department:</u> (Contact Person: Mr Michael PANG Tel: 2116 5939)</p> <p>(i) <u>Design of the proposal</u></p> <p>In addition to our comments on the applicant’s submission No. Y/K14S/3 conveyed to PlanD vide the email of 14.10.2024 at 14:21 hrs, our comments on the design of the RCHE as annexed to the fresh submission</p> | <p>Noted.</p> |

| <p>No. Y/K14S/4 are appended in the below-attached Response-to-Comment table.</p> <p><u>General</u></p> <p>1. Under the Incentive Scheme to Encourage Provision of Residential Care Homes for the Elderly Premises in New Private Development, SWD will only support development proposals that provide "Nursing Homes" or "Care and Attention Homes". While para. 3.1.2 (page 15) of the Supporting Planning Statement stated that a total of 302 Care and Attention Homes places would be operated on a self-financing basis, footnote 3 of the Supporting Planning Statement stated that the proposed development would provide not less than 302 bed spaces and not more than 557 bed spaces. While 302 bed spaces would be Care and Attention places, please clarify the nature of the proposed RCHE if a maximum of 557 bed spaces would be provided.</p> <p>2. As observed in the layout plan, 4 isolation rooms were provided on 5/F, 8/F, 12/F & 17/F while nursing station would only be provided on 9/F, 14/F, 18/F. From service point of view, it is undesirable that only 3 nursing stations could be provided on certain floors to serve the whole RCHE. Nurse station/ nurse duty room should be provided on each floor in order to facilitate care delivery and supervision.</p> <p>3. As stated in page 15 of the Supporting Planning Statement, the proposed development would provide not less than 302 bed spaces and not more than 557 bed spaces. The number of staff corresponding to the number of bed spaces should comply with the</p> | <p>If a maximum of 557 bed spaces is proposed, all these spaces will be allocated for a combination of types of RCHE Care and Attention Homes places.</p> <p>Noted, please refer to the revised drawings no. SK-7 and SK-7B for the provision of nursing station on each RCHE typical floor.</p> <p>The estimated number of staff would be 63 based on an assumption of 557 bed spaces to comply with the Code of Practice for Residential Care Homes (Elderly Persons).</p> |

| <p>requirement as stipulated in the Code of Practice for Residential Care Homes (Elderly Persons).</p> <p><u>Height Restriction</u></p> <p>4. Assessment by the Fire Services Department on the building fire safety design of the proposed RCHE is being sought. Further comments could be given in due course.</p> <p><u>Funding Mode</u></p> <p>5. Given the applicant's intention of providing self-financing places, the proposed RCHE shall be operated on privately financing mode with no financial implication, both capital and recurrent, on the Social Welfare Department.</p> <p>The above comments are by no means exhaustive. Detailed comments will be provided upon receipt of the applicant’s Further Information, if any. Please note that design and construction of RCHE shall comply with all relevant licensing and statutory requirements including but not limited to the Residential Care Homes (Elderly Persons) Ordinance (Cap. 459) and its subsidiary legislation and the latest version of the Code of Practice for Residential Care Homes (Elderly Persons) (CoP).</p> <p>(ii) <u>Other accommodation requirements</u></p> <p>Making reference to the requirements for setting up contract homes, parking spaces for private light buses of the RCHE and ambulances as well as loading/unloading areas may be necessary for meeting operational needs. Hence, the applicant is advised to make sure that there will be sufficient provision of parking spaces and loading/unloading areas.</p> | <p>Noted.</p> <p>Noted.</p> <p>Noted.</p> <p>As mentioned in the Traffic Impact Assessment Report (Appendix V refers), the internal transport facilities for the RCHE within the Proposed Development is provided based on the operational needs and also with reference to RCHEs in Kwun Tong. Hence, sufficient provision of parking spaces and loading/unloading areas have already been provided.</p> |

Executive Summary

行政摘要

1. INTRODUCTION

- 1.1 Purpose
- 1.2 Report Structure

2. SITE AND PLANNING CONTEXT

- 2.1 Site Location and Existing Use
- 2.2 Land Status
- 2.3 Surrounding Land Use Pattern
- 2.4 Accessibility of the Site
- 2.5 Statutory and Non-Statutory Planning Context
- 2.6 Site Constraint
- 2.7 Gradual Transformation from Former Industrial Area into Business Area
- 2.8 Policy Initiative to Increase the Provision of RCHE Premises in New Private Developments
- 2.9 Overview on the Trend of Ageing Population and the Provision of RCHE in Hong Kong and Kwun Tong District
- 2.10 Planning History of the Site and Surrounding Area

3. THE PROPOSED DEVELOPMENT PROPOSAL

- 3.1 The Indicative Development Proposal
- 3.2 Design of RCHE
- 3.3 Access and Provision of Internal Transport Facilities
- 3.4 Design Merits

4. PROPOSED ZONING AMENDMENTS

- 4.1 The Rezoning Proposal

5. PLANNING MERITS AND JUSTIFICATIONS

- 5.1 The Proposed Development is In-line with Government's Policies to Meet the Pressing Need of RCHE
- 5.2 The Proposed Development Will Help to Meet the Deficit of RCHE Bed Places in Kwun Tong
- 5.3 The Application Site is Suitable for the Proposed Development
- 5.4 In Line with the Trend of Transformation to the Surrounding Planning Context
- 5.5 The Proposed Development Would Not Jeopardise the Intention of KTBA Being an Economic and Employment Hub
- 5.6 Optimization of Scarce Land Resources for Much-needed RCHE Facilities
- 5.7 Enhancing Street Level Environment and the Visual Quality
- 5.8 Brings Improvement to Connectivity
- 5.9 Appropriate Development Quantum
- 5.10 The Proposal is Technically Feasible

6. CONCLUSION AND SUMMARY

| 1/F | Dining Hall, Kitchen, E&M |
| G/F | Lift Lobby, L/UL Bays, M&E, Public Passage |
| B1/F | Car Parking Spaces, M&E |

3.1.3 Supportive facilities are proposed on 4-5/F, 7-12/F and 14-20/F and the preliminary function of the facilities are stated in **Table 3.3**. The proposed function will be further revised in later detail design stage.

⁴ Ditto

3.4 Design Merits

3.4.1 In formulating the Indicative Development Scheme, the schematic design has taken into account the various site constraints as well as design considerations in order to ensure the Scheme is designed to create a high-quality development in harmony with the branding of CBD2.

- Provide 2.3m and 1.5m full-height building setbacks from Wai Yip Street and the back lane respectively. The Applicant is also providing an additional 1.5m setback with a clear height of 5.1m at the back lane to enhance the traffic circulation.
- Provide a 3m wide public passage at G/F to serve as a short-cut between Wai Yip Street and the back lane through to other existing buildings on Tai Yip Street. The public passageway will be opened for 24 hours daily.
- Maximise greening opportunities to enhance the amenity and visual quality, e.g. provide a veritable green wall on G/F that fronts onto Wai Yip Street, provide landscaped area with planter seat walls and water feature on 3/F, as well as rooftop garden with ornamental shrubs, multi-functional lawn and creeping plants on R/F. **The 3/F podium roof is intended to serve RCHE and the R/F green roof is intended to serve the hotel during operation hours only.**
- Provide a 1.5m wide canopy along the footpath of Wai Yip Street and a recessed covered area of about 8.5m² at the hotel entrance for sheltering.
- Refuge floors with cross ventilation at 13/F will be provided to improve air ventilation in the neighbourhood.
- Compliance with Sustainable Building Design Guidelines ("SBDG") including 1) provision of building setback; 2) continuous projected façade length is less than 60m and 3) greenery provision of not less than 20%.

Proposed Rezoning of the Site from "OU(B)" to "OU(Residential Care Home for the Elderly and Hotel)" for a Proposed Composite Development with Residential Care Home for the Elderly and Hotel at Nos. 107 – 109 Wai Yip Street, Kwun Tong S12A Amendment of Plan Application

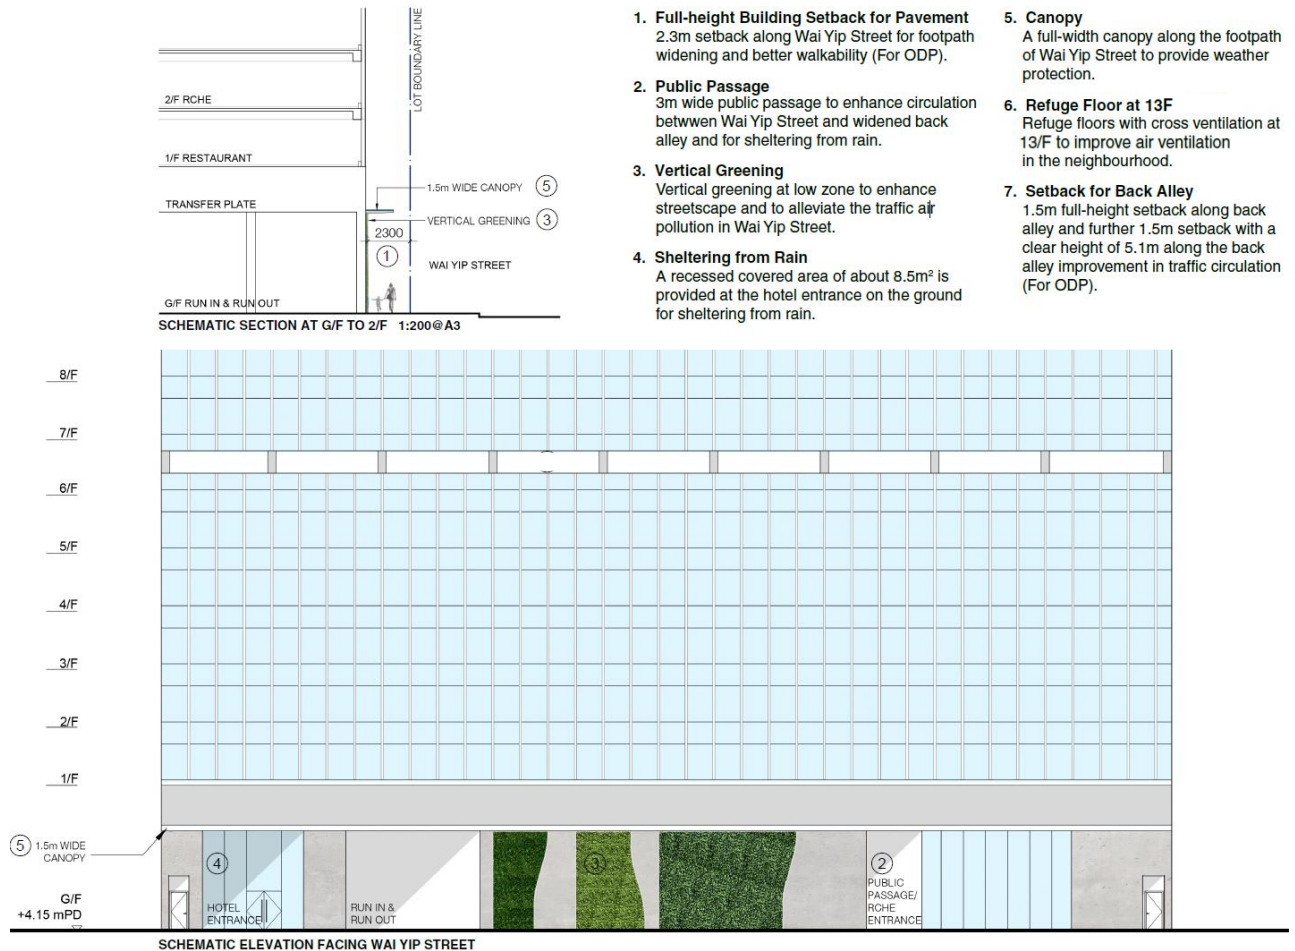

Figure 3.1 Summary of Planning and Design Merits

Figure 3.2 Proposed Development Viewed from Wai Yip Street

Bund Road/Lai Yip Street, which are estimated to be completed before 2032. In addition, swept path analysis was also conducted to ensure that all vehicles could enter and leave the development and the spaces provided with ease. Despite the maximum number of RCHE bed spaces of 557 under the proposed scheme, a sensitivity test has also been conducted for the scheme with 644 beds according to the minimum bed space requirement under the Residential Care Homes (Elderly Persons) Regulation for nursing home or care and attention home. The results concluded that the Proposed Development will result in no adverse traffic impact to the surrounding road network.

Visual Aspect (Appendix 4 refers)

5.10.3 A Visual Impact Assessment ("VIA") has been conducted to assess the visual impact associated with the Proposed Development. The resultant overall visual impact of the Proposed Development to the Visual Sensitive Receivers ("VSRs") represented by the selected Viewpoint ("VPs") would be negligible to slightly adverse. As seen from the photomontages, the Proposed Development with +115mPD would induce visual change for VSRs at VP1, VP3, VP4, VP5 and VP7. However, it would appear more comparable upon redevelopment of the nearby medium-rise buildings and the visual effect of the Proposed Development would be a lot less influential. The multi-level greenings on 3/F and R/F would echo with the greenery within Hoi Bun Road Park and help enhance the visual experience and add visual interest of VSRs. No obstruction of the Victoria Harbour and the major ridgeline with the 20% Building Free Zone would be anticipated when viewing from the strategic viewing point at VP6. Hence, there would be negligible and slight impact in the visual aspect.

Environmental Aspect (Appendix 5 refers)

5.10.4 An Environmental Impact Assessment ("EA") has been conducted to assess the air quality and noise impacts associated with the Proposed Development. From the air quality perspective, while an active chimney is identified within 200m of the Site, the fresh air intake point for the central air-conditioning system is carefully positioned beyond 200m from the chimney and beyond 20m from Wai Yip Street. Adequate buffer distance from both the road and the chimney is provided in accordance with the requirements outlined in the HKPSG. Therefore, no adverse vehicular and chimney emission impacts are anticipated. In terms of noise impact, the Proposed Development will be equipped with central air-conditioning system and will not rely on openable windows for ventilation under normal circumstances. Prescribed windows requirement for rehabilitation rooms will be met in accordance with the Code of Practice for RCHE and Building (Planning) Regulations. The EA concluded that no adverse impact is anticipated from the air quality and noise perspectives.

Sewerage Aspect (Appendix 6 refers)

5.10.5 The Sewerage Impact Assessment ("SIA") has quantitatively assessed the potential sewerage impact by comparing the estimated sewage flow from the

1. INTRODUCTION

1.1 Background and Objectives

- 1.1.1 According to the Approved Kwun Tong (South) Outline Zoning Plan (OZP) No. S/K14S/25, the Application Site falls within an area zoned "Other Specified Uses (Business)". The purpose of this submission is to seek permission from the Town Planning Board (the Board) in support of the Proposed Development at 107-109 Wai Yip Street (hereafter referred to as the "Application Site").
- 1.1.2 Ramboll Hong Kong Limited has been appointed by the Applicant to conduct this Sewerage Impact Assessment (SIA) in support of the Planning Application under the Town Planning Ordinance.

1.2 Application Site and its Environ

- 1.2.1 The Application Site area is about 1,171 m². It is located at the Kwun Tong Industrial Area bounded by Wai Yip Street to the south and Tai Yip Street to the north. The Application Site is sandwiched between industrial and commercial buildings to the west and east. Figure 1.1 shows the location of the Application Site and its environ.

1.3 Proposed Development

- 1.3.1 The Proposed Development comprises a 33-storey building with 1 level of basement carpark. The building consists of 18 storeys of residential care home for the elderly (RCHE) and 11 storeys of hotel. It contains a GFA of about 16,856 m² for RCHE and hotel use. The development schedule of the proposed development is shown in Table 1.1.

Table 1.1 Development Schedule

| | |
|---|--|
| Total Site Area | About 1,170.578m ² |
| Plot Ratio | 14.4 |
| Total GFA <ul style="list-style-type: none"> • RCHE • Hotel | Not more than 16,856.323m ² <ul style="list-style-type: none"> • 12,000m² • 4,856.323m² |
| No. of Guestroom for Hotel | 200 rooms |
| No. of RCHE Bed Space | Not less than 302 and not more than 557 |
| Site Coverage | Not more than 60% |
| Class of Site | Class A |
| No. of Block | 1 |
| Maximum Building Height (Main Roof) | About +115mPD |
| No. of Storeys | 33 (including 1 level of basement) |

- 1.3.2 Although the proposed maximum number of beds is 557, the RCHE GFA can accommodate up to 644 beds if adopting the minimum space per bed requirement for nursing home or care and attention home under Section 22(1) of the Residential Care Homes (Elderly Persons) Regulation. Therefore, the assessment assumption adopting 644 beds has been assumed as a worst case scenario in this SIA.

2. SEWERAGE IMPACT ASSESSMENT

2.1 Scope of Work

2.1.1 The aim of this SIA is to assess whether the capacity of the existing sewerage network serving the Application Site is sufficient to cope with the sewage flow from the Proposed Development.

2.2 Assessment Criteria and Methodology

2.2.1 The Commercial and Industrial Floor Space Utilization Survey (CIFSUS) conducted by the Planning Department has been used to determine the worker density for various economic activities and planned usage types.

2.2.2 Environmental Protection Department's (EPD's) Guidelines for Estimating Sewage Flows for Sewerage Infrastructure Planning, Version 1 (GESF) has been referred to for the purposes of estimating the quantity of the sewage generated from the Proposed Development and the existing catchment area. Sewage flow parameters and global peaking factors in this document have been adopted for this SIA.

2.2.3 According to the GESF, the overall unit flow is composed of flows due to residents, employees and the associated activities. The following unit flow factors have been adopted in the SIA calculation in accordance with Tables T-1, T-2 and T-3 of the GESF:

- Domestic: 0.19 m³/day (Institutional and Special Class)
- Industrial: 0.53m³/day (Industrial Employee and J1 Manufacturing in East Kowloon)
- Retail Trade: 0.28m³/day (Commercial Employee and J4 Wholesale & Retail)
- Office: 0.08m³/day (Commercial Employee and J6 Finance, Insurance, Real Estate & Business Services)
- Restaurant: 1.58m³/day (Commercial Employee and J10 Restaurants & Hotels)
- Social Facilities: 0.28 m³/day (Commercial Employee and J11 Community, Social & Personal Services)
- Storage: 0.18m³/day (Commercial Employee and J3 Transport, Storage & Communication)

2.2.4 The catchment inflow factor, PCIF of 1.1 (East Kowloon), is adopted in catchment calculations.

2.3 Existing and Future Sewerage System

2.3.1 According to the Drainage Record obtained from DSD, there are Ø225mm sewer pipes running along Tai Yip Street and the back lane of the Proposed Development, and Ø225mm and Ø400mm sewer pipes running along Wai Yip Street. The existing sewers in the vicinity of the Application Site are shown in Figure 2.1.

2.3.2 A new terminal manhole FTMH-01 (P1) will be constructed within the Application Site to collect sewage from the Proposed Development. A new Ø225mm polyethylene sewer pipe is proposed to connect the Proposed Development and the existing government manhole FMH4042668(S1) along Wai Yip Street.

2.3.3 Invert levels and pipe size of the proposed terminal manhole and existing manholes are shown in Appendix 2.1.

2.4 Wastewater Generated by the Proposed Development

2.4.1 Wastewater arising from the Proposed Development will be contributed by residents of the RCHE and the hotel, as well as employees of the RCHE, the hotel, restaurants and RCHE communal facilities. In addition, backwash of the water feature is also considered when assessing the sewage system capacity. Backwash of the water feature will only be conducted in non-peak hours to avoid potential overflow.

2.4.2 Detailed calculation of sewage generation from the Proposed Development is given in Table 2.1 below.

Table 2.1 Estimated Peak Flow

| Calculation for Sewage Generation Rate of the Proposed Development | | |
|--|---|---|
| 1. Residential Care Homes for the Elderly (RCHE) | | |
| 1a. Total no. of residents | = | 644 residents (644 beds) |
| 1b. Design flow of residents | = | 190 litre/resident/day – (refer to Table T-1 of GESF – Domestic – Institutional and Special Class) |
| 1c. Sewage generation rate from residents | = | 122.4 m ³ /day |
| 1d. Total no. of employees ^[1] | = | 148 Employees |
| 1e. Design flow of employees | = | 280 Litre/employee/day – (refer to Table T-2 of GESF – J11 Community, Social & Personal Services) |
| 1f. Sewage generation rate from employees | = | 41.4 m ³ /day |
| 2. Hotel | | |
| 2a. Assumed area | = | 4856 m ² |
| 2b. Assumed floor area per employee | = | 71.4 m ² per employee – (refer to Table 8 of CIFSUS – Hotels and Boarding Houses, Private Commercials) |
| 2c. Total number of employees | = | 68 employees |
| 2d. Design flow | = | 1580 litre/employee/day – (refer to Table T-2 of GESF – J10 Restaurants & Hotels) |
| 2e. Sewage generation rate | = | 107.4 m ³ /day |
| 3. RCHE F&B/ Restaurant | | |
| 3a. Assumed area | = | 415 m ² |
| 3b. Assumed floor area per employee | = | 19.6 m ² per employee – (refer to Table 8 of CIFSUS – Restaurants) |
| 3c. Total number of employees | = | 21 employees |
| 3d. Design flow | = | 1580 litre/employee/day – (refer to Table T-2 of GESF – J10 Restaurants & Hotels) |
| 3e. Sewage generation rate | = | 33.4 m ³ /day |
| 4. RCHE Communal Facilities | | |
| 4a. Assumed area | = | 1338 m ² |
| 4b. Assumed floor area per employee | = | 30.3 m ² per employee -- (refer to Table 8 of CIFSUS - Community, Social & Personal Services) |
| 4c. Total number of employees | = | 44 employees |
| 4d. Design flow | = | 280 litre/employee/day -- (refer to Table T-2 of GESF - J11 Community, Social & Personal Services) |
| 4e. Sewage generation rate | = | 12.4 m ³ /day |
| 5. Water Feature (Outdoor) | | |
| 5a. Volume of Water Feature | = | 90.0 m ³ |
| 5b. Turnover Rate | = | 6 hr |
| 5c. Adopted Surface Loading Rate of Filter | = | 50 m ³ /m ² /hr |
| 5d. Adopted Filter Area | = | 0.3 m ² |
| 5e. Backwash Duration | = | 3 min/d |
| 5f. Backwash flow rate | = | 30 m ³ /m ² /hr |
| 5g. Design flow for Water Feature Backwashing | = | 0.5 m ³ /day |

| | | | |
|--|---|-------|--|
| Calculation for Sewage Generation Rate of the Proposed Development | | | |
| 5h. Design flow for Water Feature Backwashing | = | 2.5 | litre/sec |
| Total Flow from the Proposed Development | | | |
| Flow Rate | = | 317.0 | m ³ /day |
| Flow Rate with P _{CIF} (East Kowloon – 1.1) | = | 348.7 | m ³ /day (refer to Table T-4 of GESF – East Kowloon) |
| Contributing Population | = | 1292 | people |
| Peaking factor | = | 6 | refer to Table T-5 of GESF for a population of less than 5000 incl. stormwater allowance |
| Peak Flow (excluding backwash of water feature) | = | 24.2 | litre/sec |
| Peak Flow (including backwash of water feature) | = | 26.7 | litre/sec |
| Remark: | | | |
| [1] Build-up of staff under Code of Practice for RCHE Section 9.1.1 for Care and Attention Home: | | | |
| 1) | 1 health worker / nurse for every 30 residents, i.e. 644/30 = 22 nos. | | |
| 2) | 1 care worker for every 20 residents, i.e. 644/20 = 33 nos. | | |
| 3) | 1 ancillary worker for every 40 residents, i.e. 644/40 = 17 nos. | | |
| 4) | General staff = 2 nos. | | |
| Total staff = 74 nos. | | | |
| Assuming there are two shifts of staff, i.e. daytime and night-time, the total daily number of employees at the RCHE is 148. It should be noted that night-time requires less staff than daytime. Therefore, the current assumption serves as a conservative scenario. | | | |

2.5 Assessment of Sewerage Impact

2.5.1 Sewage generated from the Application Site will be discharged from the terminal manhole FTMH-01 (P1) via a polyethylene (PE) pipe, to existing manhole FMH4042668 (S1) of the public sewerage system as shown in Figure 2.1. Catchments in the vicinity of the Application Site are shown in Figure 2.2.

2.5.2 The estimated sewage flow of the Proposed Development and nearby catchments under existing conditions have been compared with the capacity of the existing sewerage system as shown in Appendix 2.1 - Table 3a. For the estimated sewage flow of the Proposed Development and nearby catchments with approved planned developments, the results are shown in Appendix 2.1 – Table 3b.

2.5.3 In accordance with Section 5.11 of the Sewerage Manual, should the existing sewage system be under-capacity, the following shall be satisfied to demonstrate that no adverse sewerage impact will arise as a result of the proposed development:

- minimum freeboard of 1m at peak flow;
- A minimum factor of safety against overflowing of 1.15, i.e. overflow will not occur at a flow rate of (1.15 times peak flow)

2.6 Discussion

2.6.1 According to the calculation results presented in Tables 4a and 4b of Appendix 2.1, the sewage generated from the Application Site and surrounding catchment areas exceed the capacity of the existing sewerage network at segment S6-S7, S7-S8, S8-S9, S9-S10, S10-S11 and S11-S12 under both existing conditions and with approved planned developments. As spillage shown in existing condition is worse than that in planned conditions, backwash analysis is conducted with peak flow under existing conditions.

2.6.2 The results indicate that there are sufficient freeboards for all concerned manholes, i.e. over 1m. Taking into account the safety factor requirement, the peak flow rates are multiplied by 1.15 and no overflow is identified. With sufficient freeboards for the surcharged sewers, no unacceptable sewerage impact resulting from the Proposed Development is anticipated.

3. OVERALL CONCLUSION

- 3.1.1 The potential sewerage impact arising from the Application Site has been quantitatively assessed by comparing the estimated sewage flow from the Proposed Development and the capacity of the existing sewerage system in the vicinity.
- 3.1.2 Based on the assessment findings, the sewage generated from the Application Site and surrounding catchment areas exceed the capacity of the existing sewerage network at segment S6-S7, S7-S8, S8-S9, S9-S10, S10-S11 and S11-S12 under both existing conditions and with approved planned developments. A backwater analysis was conducted and revealed that there are sufficient freeboards for all concerned manholes and no overflow during peak flow rates. Therefore, with sufficient freeboards for the surcharged sewers, no unacceptable sewerage impact resulting from the Proposed Development is anticipated.
- 3.1.3 This SIA confirms the feasibility of the Proposed Development in terms of its sewerage impact.

| Hotel | | | |
| Assumed area | = | 4856 m ² | |
| Assumed floor area per employee | = | 71.4 m ² per employee -- (refer to Table 8 of CIFSUS - Hotels and Boarding Houses, Private Commercials) | |
| Total number of employees | = | 68 employees | |
| Design flow | = | 1580 litre/employee/day -- (refer to Table T-2 of GESF - J10 Restaurants & Hotels) | |
| Sewage generation rate | = | 107.4 m ³ /day | |
| F&B / restaurant | | | |
| Assumed area | = | 415 m ² | |
| Assumed floor area per employee | = | 19.6 m ² per employee -- (refer to Table 8 of CIFSUS - Restaurants) | |
| Total number of employees | = | 21 employees | |
| Design flow | = | 1580 litre/employee/day -- (refer to Table T-2 of GESF - J10 Restaurants & Hotels) | |
| Sewage generation rate | = | 33.4 m ³ /day | |
| RCHE Communal Facilities | | | |
| Assumed area | = | 1338 m ² | |
| Assumed floor area per employee | = | 30.3 m ² per employee -- (refer to Table 8 of CIFSUS - Community, Social & Personal Services) | |
| Total number of employees | = | 44 employees | |
| Design flow | = | 280 litre/employee/day -- (refer to Table T-2 of GESF - J11 Community, Social & Personal Services) | |
| Sewage generation rate | = | 12.4 m ³ /day | |
| Water Feature (outdoor) | | | |
| Volume of Water Feature | = | 90.0 m ³ | |
| Turnover Rate | = | 6 hr | |
| Adopted Surface Loading Rate of Filter | = | 50 m ³ /m ² /hr | |
| Adopted Filter Area | = | 0.3 m ² | |
| Backwash Duration | = | 3 min/d | |
| Backwash flow rate | = | 30 m ³ /m ² /hr | |
| Design flow for Water Feature Backwashing | = | 0.5 m ³ /day | |
| Design flow for Water Feature Backwashing | = | 2.5 litre/sec | |
| Total Flow from the Proposed Development | | | |
| Flow rate (excluding backwash of water feature) | = | 317.0 m ³ /day | |
| Flow rate with P _{CIF} (East Kowloon - 1.1) | = | 348.7 m ³ /day (refer to Table T-4 of GESF - East Kowloon - 1.1) | |
| Contributing population | = | 1292 people | |
| Peaking factor | = | 6 (refer to Table T-5 of GESF for a population of less than 5000 incl. stormwater allowance) | |
| Peak flow (excluding backwash of water feature) | = | 24.2 litre/sec | |
| Peak flow (including backwash of water feature) | = | <u>26.7</u> litre/sec | |

Note:

[1] As a conservative approach, the total number of elderly residents is assumed to be the maximum number of beds provided by the RCHE.

[2] Build-up of staff under Code of Practice for RCHE Section 9.1.1 for Care and Attention Home:

- 1) 1 health worker / nurse for every 30 residents, i.e. 644/30 = 22 nos.
- 2) 1 care worker for every 20 residents, i.e. 644/20 = 33 nos.
- 3) 1 ancillary worker for every 40 residents, i.e. 644/40 = 17 nos.
- 4) General staff = 2 nos.

Total staff = 74 nos.

Assuming there are two shifts of staff, i.e. daytime and night-time, the total daily number of employee at the RCHE is 148. It should be noted that night-time requires less staff than daytime. Therefore, the current assumption serves as a conservative scenario.

[3] For job types J10 and J11, the "per-employee" unit flow factor takes into account the flows of customers and/or tenants

Table 2a Hydraulic Capacity of Existing and Proposed Sewers - Free Flow Condition (Existing Condition)

- Remarks:
- (1) g=gravitational acceleration; k_s=equivalent sand roughness; s=gradient; v=kinematic viscosity of water; V=mean velocity
 - (2) The values of k_s = 0.6mm and 3mm are used for the calculation of slimed clayware sewer, poor condition @mean velocity = approximately 1.2m/s and 0.75m/s respectively (based on Table 5: Recommended Roughness Values in Sewerage Manual)
 - (3) The values of k_s = 1.5mm is used for the calculation of proposed polyethylene sewer, poor condition @mean velocity = approximately 0.75m/s (based on Table 5: Recommended Roughness Values in Sewerage Manual)
 - (4) The value of velocity (V) is referred to the Tables for the hydraulic design of pipes, sewers and channels (8th edition)
 - (5) Equation used:
$$V = \frac{1.49}{1.49} \sqrt{(8gDs)} \log\left(\frac{k_s}{3.7D} + \frac{2.51v}{D\sqrt{(2gDs)}}\right)$$

Table 3a Calculation for Sewage generation rate of the Surrounding Building (Existing Condition)

Catchment A, discharges to FMH4042669 (S2)

1. On Cheong Factory Building (19 Tai Yip Street)

Industrial - Manufacturing

| | | |
|---------------------------------|---|---|
| Assumed area | = | 2510 m ² |
| Assumed floor area per employee | = | 43.5 m ² per employee -- (refer to Table 8 of CIFSUS - Manufacturing) |
| Total number of employees | = | 58 employees |
| Design flow | = | 530 litre/employee/day -- (refer to Table T-3 of GESF - J1 Manufacturing in East Kowloon) |
| Sewage generation rate | = | 30.6 m ³ /day |

2. Winful Industrial Building (15-17 Tai Yip Street)

Industrial - Manufacturing

| | | |
|---------------------------------|---|--|
| Assumed area | = | 5280 m ² |
| Assumed floor area per employee | = | 30.3 m ² per employee -- (refer to Table 8 of CIFSUS - Manufacturing - I/O Buildings) |
| Total number of employees | = | 174 employees |
| Design flow | = | 530 litre/employee/day -- (refer to Table T-3 of GESF - J1 Manufacturing in East Kowloon) |
| Sewage generation rate | = | 92.3 m ³ /day |

3. Peter Leung Industrial Building (103 Wai Yip Street)

a) Industrial - Manufacturing

| | | |
|---------------------------------|---|--|
| Assumed area | = | 2827 m ² |
| Assumed floor area per employee | = | 30.3 m ² per employee -- (refer to Table 8 of CIFSUS - Manufacturing - I/O Buildings) |
| Total number of employees | = | 93 employees |
| Design flow | = | 530 litre/employee/day -- (refer to Table T-3 of GESF - J1 Manufacturing in East Kowloon) |
| Sewage generation rate | = | 49.4 m ³ /day |

b) Express delivery

| | | |
|---------------------------------|---|--|
| Assumed area | = | 201 m ² |
| Assumed floor area per employee | = | 22.7 m ² per employee -- (refer to Table 8 of CIFSUS - Financial, Insurance, Real Estate & Business Services - I/O Buildings) |
| Total number of employees | = | 9 employees |
| Design flow | = | 80 litre/employee/day -- (refer to Table T-2 of GESF - J6 Finance, Insurance, Real Estate & Business Services) |
| Sewage generation rate | = | 0.7 m ³ /day |

4. Red Square (105 Wai Yip Street)

Office

| | | |
|---------------------------------|---|---|
| Assumed area | = | 1739 m ² |
| Assumed floor area per employee | = | 18.2 m ² per employee -- (refer to Table 8 of CIFSUS - Financial, Insurance, Real Estate & Business Services) |
| Total number of employees | = | 96 employees |
| Design flow | = | 80 litre/employee/day -- (refer to Table T-2 of GESF - J6 Finance, Insurance, Real Estate & Business Services) |
| Sewage generation rate | = | 7.7 m ³ /day |

F&B

| | | |
|---------------------------------|---|--|
| Assumed area | = | 191 m ² |
| Assumed floor area per employee | = | 19.6 m ² per employee -- (refer to Table 8 of CIFSUS - Restaurant) |
| Total number of employees | = | 10 employees |
| Design flow | = | 1580 litre/employee/day -- (refer to Table T-2 of GESF - J10 Restaurants and Hotels) |
| Sewage generation rate | = | 15.4 m ³ /day |

Table 3a Calculation for Sewage generation rate of the Surrounding Building (Existing Condition)

5. Yat Sang Industrial Building
Industrial - Manufacturing

| | | |
|---------------------------------|---|---|
| Assumed area | = | 2400 m ² |
| Assumed floor area per employee | = | 43.5 m ² per employee -- (refer to Table 8 of CIFSUS - Manufacturing) |
| Total number of employees | = | 55 employees |
| Design flow | = | 530 litre/employee/day -- (refer to Table T-3 of GESF - J1 Manufacturing in East Kowloon) |
| Sewage generation rate | = | 29.3 m ³ /day |

6. Kevin Wong Development Building (11 Tai Yip Street)
Industrial - Manufacturing

| | | |
|---------------------------------|---|--|
| Assumed area | = | 3080 m ² |
| Assumed floor area per employee | = | 30.3 m ² per employee -- (refer to Table 8 of CIFSUS - Manufacturing - I/O Buildings) |
| Total number of employees | = | 102 employees |
| Design flow | = | 530 litre/employee/day -- (refer to Table T-3 of GESF - J1 Manufacturing in East Kowloon) |
| Sewage generation rate | = | 53.9 m ³ /day |

7. Hecny Centre (111 Wai Yip Street)
a) Office

| | | |
|---------------------------------|---|---|
| Assumed area | = | 1772 m ² |
| Assumed floor area per employee | = | 18.2 m ² per employee -- (refer to Table 8 of CIFSUS - Financial, Insurance, Real Estate & Business Services) |
| Total number of employees | = | 97 employees |
| Design flow | = | 80 litre/employee/day -- (refer to Table T-2 of GESF - J6 Finance, Insurance, Real Estate & Business Services) |
| Sewage generation rate | = | 7.8 m ³ /day |

b) Retail

| | | |
|---------------------------------|---|---|
| Assumed area | = | 253 m ² |
| Assumed floor area per employee | = | 28.6 m ² per employee -- (refer to Table 8 of CIFSUS - Retail Trade) |
| Total number of employees | = | 9 employees |
| Design flow | = | 280 litre/employee/day -- (refer to Table T-2 of GESF - J4 Wholesale & Retail) |
| Sewage generation rate | = | 2.5 m ³ /day |

c) F&B

| | | |
|---------------------------------|---|--|
| Assumed area | = | 406 m ² |
| Assumed floor area per employee | = | 19.6 m ² per employee -- (refer to Table 8 of CIFSUS - Restaurants) |
| Total number of employees | = | 21 employees |
| Design flow | = | 1580 litre/employee/day -- (refer to Table T-2 of GESF - J10 Restaurants and Hotels) |
| Sewage generation rate | = | 32.7 m ³ /day |

8. Ho King Industrial Building (9 Tai Yip Street)
Industrial - Manufacturing

| | | |
|---------------------------------|---|---|
| Assumed area | = | 2044 m ² |
| Assumed floor area per employee | = | 43.5 m ² per employee -- (refer to Table 8 of CIFSUS - Manufacturing) |
| Total number of employees | = | 47 employees |
| Design flow | = | 530 litre/employee/day -- (refer to Table T-3 of GESF - J1 Manufacturing in East Kowloon) |
| Sewage generation rate | = | 24.9 m ³ /day |

Table 3a Calculation for Sewage generation rate of the Surrounding Building (Existing Condition)

9. Wing Tai Factory Building (3 Tai Yip Street)

Industrial - Manufacturing

| | | |
|---------------------------------|---|--|
| Assumed area | = | 3144 m ² |
| Assumed floor area per employee | = | 30.3 m ² per employee -- (refer to Table 8 of CIFSUS - Manufacturing - I/O Buildings) |
| Total number of employees | = | 104 employees |
| Design flow | = | 530 litre/employee/day -- (refer to Table T-3 of GESF - J1 Manufacturing in East Kowloon) |
| Sewage generation rate | = | 55.0 m ³ /day |

Storage

| | | |
|---------------------------------|---|--|
| Assumed area | = | 147 m ² |
| Assumed floor area per employee | = | 250.0 m ² per employee -- (refer to Table 8 of CIFSUS - Storage) |
| Total number of employees | = | 1 employees |
| Design flow | = | 180 litre/employee/day -- (refer to Table T-2 of GESF - J3 Transport, Storage & Communication) |
| Sewage generation rate | = | 0.1 m ³ /day |

10. Hay Nien Building (1 Tai Yip Street)

Industrial - Manufacturing

| | | |
|---------------------------------|---|--|
| Assumed area | = | 5842 m ² |
| Assumed floor area per employee | = | 30.3 m ² per employee -- (refer to Table 8 of CIFSUS - Manufacturing - I/O Buildings) |
| Total number of employees | = | 193 employees |
| Design flow | = | 530 litre/employee/day -- (refer to Table T-3 of GESF - J1 Manufacturing in East Kowloon) |
| Sewage generation rate | = | 102.2 m ³ /day |

11. Air Goal Cargo Building (330 Kwun Tong Road)

Industrial - Manufacturing

| | | |
|---------------------------------|---|---|
| Assumed area | = | 2309 m ² |
| Assumed floor area per employee | = | 43.5 m ² per employee -- (refer to Table 8 of CIFSUS - Manufacturing) |
| Total number of employees | = | 53 employees |
| Design flow | = | 530 litre/employee/day -- (refer to Table T-3 of GESF - J1 Manufacturing in East Kowloon) |
| Sewage generation rate | = | 28.2 m ³ /day |

Table 3a Calculation for Sewage generation rate of the Surrounding Building (Existing Condition)

12. Hong Kong Commercial Daily (332 Kwun Tong Road)

| | |
|---------------------------------|---|
| Office | |
| Assumed area | = 2304 m ² |
| Assumed floor area per employee | = 18.2 m ² per employee -- (refer to Table 8 of CIFSUS - Financial, Insurance, Real Estate & Business Services) |
| Total number of employees | = 127 employees |
| Design flow | = 80 litre/employee/day -- (refer to Table T-2 of GESF - J6 Finance, Insurance, Real Estate & Business Services) |
| Sewage generation rate | = 10.1 m ³ /day |

13. Far East Factory Building (334-336 Kwun Tong Road)

| | |
|---------------------------------|--|
| Office | |
| Assumed area | = 7833 m ² |
| Assumed floor area per employee | = 30.3 m ² per employee -- (refer to Table 8 of CIFSUS - Manufacturing - I/O Buildings) |
| Total number of employees | = 258 employees |
| Design flow | = 530 litre/employee/day -- (refer to Table T-3 of GESF - J1 Manufacturing in East Kowloon) |
| Sewage generation rate | = 137.0 m ³ /day |

14. Room Kwun Tong (338 Kwun Tong Road)

| | |
|---------------------------------|--|
| Storage | |
| Assumed area | = 6570 m ² |
| Assumed floor area per employee | = 250.0 m ² per employee -- (refer to Table 8 of CIFSUS - Storage) |
| Total number of employees | = 26 employees |
| Design flow | = 180 litre/employee/day -- (refer to Table T-2 of GESF - J3 Transport, Storage & Communication) |
| Sewage generation rate | = 4.7 m ³ /day |

15. Johnson Industrial Mansion (340 Kwun Tong Road)

| | |
|---------------------------------|--|
| Industrial - Manufacturing | |
| Assumed area | = 5772 m ² |
| Assumed floor area per employee | = 30.3 m ² per employee -- (refer to Table 8 of CIFSUS - Manufacturing - I/O Buildings) |
| Total number of employees | = 190 employees |
| Design flow | = 530 litre/employee/day -- (refer to Table T-3 of GESF - J1 Manufacturing in East Kowloon) |
| Sewage generation rate | = 101.0 m ³ /day |

| Total Flow at S11 (including Proposed Development + Catchment A & B & C) | = | 2,433.1 m ³ /day |
| Total Flow at S12 (including Proposed Development + Catchment A & B & C & D) | = | 2,735.4 m ³ /day |
| Total Flow at S13 (including Proposed Development + Catchment A & B & C & D) | = | 2,735.4 m ³ /day |

Table 3b Calculation for Sewage generation rate of the Surrounding Building (Planned Condition)

Catchment A, discharges to FMH4042669 (S2)

1. On Cheong Factory Building (19 Tai Yip Street)

Industrial - Manufacturing

| | | |
|---------------------------------|---|---|
| Assumed area | = | 2510 m ² |
| Assumed floor area per employee | = | 43.5 m ² per employee -- (refer to Table 8 of CIFSUS - Manufacturing) |
| Total number of employees | = | 58 employees |
| Design flow | = | 530 litre/employee/day -- (refer to Table T-3 of GESF - J1 Manufacturing in East Kowloon) |
| Sewage generation rate | = | 30.6 m ³ /day |

2. Winful Industrial Building (15-17 Tai Yip Street)

Industrial - Manufacturing

| | | |
|---------------------------------|---|--|
| Assumed area | = | 5280 m ² |
| Assumed floor area per employee | = | 30.3 m ² per employee -- (refer to Table 8 of CIFSUS - Manufacturing - I/O Buildings) |
| Total number of employees | = | 174 employees |
| Design flow | = | 530 litre/employee/day -- (refer to Table T-3 of GESF - J1 Manufacturing in East Kowloon) |
| Sewage generation rate | = | 92.3 m ³ /day |

3. Peter Leung Industrial Building (103 Wai Yip Street)

a) Industrial - Manufacturing

| | | |
|---------------------------------|---|--|
| Assumed area | = | 2827 m ² |
| Assumed floor area per employee | = | 30.3 m ² per employee -- (refer to Table 8 of CIFSUS - Manufacturing - I/O Buildings) |
| Total number of employees | = | 93 employees |
| Design flow | = | 530 litre/employee/day -- (refer to Table T-3 of GESF - J1 Manufacturing in East Kowloon) |
| Sewage generation rate | = | 49.4 m ³ /day |

b) Express delivery

| | | |
|---------------------------------|---|--|
| Assumed area | = | 201 m ² |
| Assumed floor area per employee | = | 22.7 m ² per employee -- (refer to Table 8 of CIFSUS - Financial, Insurance, Real Estate & Business Services - I/O Buildings) |
| Total number of employees | = | 9 employees |
| Design flow | = | 80 litre/employee/day -- (refer to Table T-2 of GESF - J6 Finance, Insurance, Real Estate & Business Services) |
| Sewage generation rate | = | 0.7 m ³ /day |

4. Red Square (105 Wai Yip Street)

Office

| | | |
|---------------------------------|---|---|
| Assumed area | = | 1739 m ² |
| Assumed floor area per employee | = | 18.2 m ² per employee -- (refer to Table 8 of CIFSUS - Financial, Insurance, Real Estate & Business Services) |
| Total number of employees | = | 96 employees |
| Design flow | = | 80 litre/employee/day -- (refer to Table T-2 of GESF - J6 Finance, Insurance, Real Estate & Business Services) |
| Sewage generation rate | = | 7.7 m ³ /day |

F&B

| | | |
|---------------------------------|---|--|
| Assumed area | = | 191 m ² |
| Assumed floor area per employee | = | 19.6 m ² per employee -- (refer to Table 8 of CIFSUS - Restaurant) |
| Total number of employees | = | 10 employees |
| Design flow | = | 1580 litre/employee/day -- (refer to Table T-2 of GESF - J10 Restaurants and Hotels) |
| Sewage generation rate | = | 15.4 m ³ /day |

Table 3b Calculation for Sewage generation rate of the Surrounding Building (Planned Condition)

5. Yat Sang Industrial Building

Industrial - Manufacturing

| | | |
|---------------------------------|---|---|
| Assumed area | = | 2400 m ² |
| Assumed floor area per employee | = | 43.5 m ² per employee -- (refer to Table 8 of CIFSUS - Manufacturing) |
| Total number of employees | = | 55 employees |
| Design flow | = | 530 litre/employee/day -- (refer to Table T-3 of GESF - J1 Manufacturing in East Kowloon) |
| Sewage generation rate | = | 29.3 m ³ /day |

6. Kevin Wong Development Building (11 Tai Yip Street)

Industrial - Manufacturing

| | | |
|---------------------------------|---|--|
| Assumed area | = | 3080 m ² |
| Assumed floor area per employee | = | 30.3 m ² per employee -- (refer to Table 8 of CIFSUS - Manufacturing - I/O Buildings) |
| Total number of employees | = | 102 employees |
| Design flow | = | 530 litre/employee/day -- (refer to Table T-3 of GESF - J1 Manufacturing in East Kowloon) |
| Sewage generation rate | = | 53.9 m ³ /day |

7. Proposed Commercial Development at 111 Wai Yip Street and 1 Tai Yip Street (Planning

Application No. A/K14/809)

Office

| | | |
|---------------------------------|---|---|
| Assumed area | = | 13349 m ² |
| Assumed floor area per employee | = | 18.2 m ² per employee -- (refer to Table 8 of CIFSUS - Financial, Insurance, Real Estate & Business Services) |
| Total number of employees | = | 734 employees |
| Design flow | = | 80 litre/employee/day -- (refer to Table T-2 of GESF - J6 Finance, Insurance, Real Estate & Business Services) |

| | |
|---------------------------------|--|
| Assumed area | = 1201 m ² |
| Assumed floor area per employee | = 19.6 m ² per employee -- (refer to Table 8 of CIFSUS - Restaurants) |
| Total number of employees | = 61 employees |
| Design flow | = 1580 litre/employee/day -- (refer to Table T-2 of GESF - J10 Restaurants and Hotels) |
| Sewage generation rate | = 96.8 m ³ /day |

b) Retail

| | |
|-------------------------------------|---|
| Assumed area | = 1646 m ² |
| Assumed floor area per employee | = 28.6 m ² per employee -- (refer to Table 8 of CIFSUS - Retail Trade) |
| Total number of employees | = 58 employees |
| Design flow | = 280 litre/employee/day -- (refer to Table T-2 of GESF - J4 Wholesale & Retail) |
| Sewage generation rate | = 16.1 m ³ /day |
| 35% of Total sewage generation rate | = 69.1 m ³ /day |

| | |
|---|----------------------------------|
| Total Flow of Catchment C, discharges to FMH4042672 (S5) | = 576.3 m³/day |
|---|----------------------------------|

Table 3b Calculation for Sewage generation rate of the Surrounding Building (Planned Condition)

Catchment D, discharges to FMH4042678 (S12)

25. Neo

| | |
|---------------------------------|--|
| Office | |
| Assumed area | = 55390 m ² |
| Assumed floor area per employee | = 18.2 m ² per employee -- (refer to Table 8 of CIFSUS - Financial, Insurance, Real Estate & Business Services) |
| Total number of employees | = 3046 employees |
| Design flow | = 80 litre/employee/day -- (refer to Table T-2 of GESF - J6 Finance, Insurance, Real Estate & Business Services) |
| Sewage generation rate | = 243.7 m ³ /day |

26. Cooked Food Stall

| | |
|---------------------------------|--|
| Assumed area | = 385 m ² |
| Assumed floor area per employee | = 19.6 m ² per employee -- (refer to Table 8 of CIFSUS - Restaurants) |
| Total number of employees | = 20 employees |
| Design flow | = 1580 litre/employee/day -- (refer to Table T-2 of GESF - J10 Restaurants and Hotels) |
| Sewage generation rate | = 31.0 m ³ /day |

27. Lai Yip Street Public Toilet

| | |
|---|------------|
| Discharge from WC (Qty * DU) | = 19.8 L/s |
| Discharge from Basin (Qty * DU) | = 3.0 L/s |
| Discharge from Single Urinal with Cistern (Qty * DU) | = 2.4 L/s |
| Sum of DUs | = 25.2 L/s |
| Wastewater Flow Rate ($K \sum DU$) | = 5.0 L/s |
| <i>Frequency of use, K = 1, extracted from Table 6 of Plumbing Engineering Services Design Guide (PESDG)</i> | |
| <i>Discharge Unit (DU) of WC = 1.8 L/s; DU of Basin = 0.3 L/s, DU of Single Urinal with Cistern = 0.4L/s, extracted from Table 5 of PESDG</i> | |
| <i>Total number of WC = 11; Total number of Basin = 10; Total number of Single Urinal with Cistern = 6 (Site observation)</i> | |

28. Hoi Bun Road Park Public Restroom

| | |
|---|------------|
| Discharge from WC (Qty * DU) | = 21.6 L/s |
| Discharge from Basin (Qty * DU) | = 2.7 L/s |
| Discharge from Single Urinal with Cistern (Qty * DU) | = 1.2 L/s |
| Discharge from Shower without Plug (Qty * DU) | = 2.4 L/s |
| Sum of DUs | = 27.9 L/s |
| Wastewater Flow Rate ($K \sum DU$) | = 5.3 L/s |
| <i>Frequency of use, K = 1, extracted from Table 6 of Plumbing Engineering Services Design Guide (PESDG)</i> | |
| <i>Discharge Unit (DU) of WC = 1.8 L/s; DU of Basin = 0.3 L/s, DU of Single Urinal with Cistern = 0.4L/s, DU of Shower without Plug = 0.4L/s, extracted from Table 5 of PESDG</i> | |
| <i>Total number of WC = 12; Total number of Basin = 9; Total number of Single Urinal with Cistern = 3; Total number of Shower without plug = 6 (Site observation)</i> | |

| | |
|---|-----------------------------|
| Total Flow of Catchment D, excluding public toilet/restroom, discharges to FMH4042678 (S12) | = 274.7 m ³ /day |
|---|-----------------------------|

Table 3b Calculation for Sewage generation rate of the Surrounding Building (Planned Condition)

Sub-total

| | | |
|--|---|-----------------------------|
| Total Flow at S0 (including Proposed Development) | = | 317.0 m ³ /day |
| Total Flow at S1 (including Proposed Development) | = | 317.0 m ³ /day |
| Total Flow at S2 (including Proposed and Planned Development + Catchment A) | = | 976.4 m ³ /day |
| Total Flow at S3 (including Proposed and Planned Development + Catchment A) | = | 976.4 m ³ /day |
| Total Flow at S4 (including Proposed and Planned Development + Catchment A & B) | = | 1,489.1 m ³ /day |
| Total Flow at S5 (including Proposed and Planned Development + Catchment A & B & C) | = | 2,065.4 m ³ /day |
| Total Flow at S6 (including Proposed and Planned Development + Catchment A & B & C) | = | 2,065.4 m ³ /day |
| Total Flow at S7 (including Proposed and Planned Development + Catchment A & B & C) | = | 2,065.4 m ³ /day |
| Total Flow at S8 (including Proposed and Planned Development + Catchment A & B & C) | = | 2,065.4 m ³ /day |
| Total Flow at S9 (including Proposed and Planned Development + Catchment A & B & C) | = | 2,065.4 m ³ /day |
| Total Flow at S10 (including Proposed and Planned Development + Catchment A & B & C) | = | 2,065.4 m ³ /day |
| Total Flow at S11 (including Proposed and Planned Development + Catchment A & B & C & D) | = | 2,340.1 m ³ /day |
| Total Flow at S13 (including Proposed and Planned Development + Catchment A & B & C & D) | = | 2,340.1 m ³ /day |

Sub-total with Catchment Inflow Factor - East Kowloon = 1.1

| | | |
|--|---|-----------------------------|
| Total Flow at S0 (including Proposed Development) | = | 348.7 m ³ /day |
| Total Flow at S1 (including Proposed Development) | = | 348.7 m ³ /day |
| Total Flow at S2 (including Proposed and Planned Development + Catchment A) | = | 1,074.0 m ³ /day |
| Total Flow at S3 (including Proposed and Planned Development + Catchment A) | = | 1,074.0 m ³ /day |
| Total Flow at S4 (including Proposed and Planned Development + Catchment A & B) | = | 1,638.0 m ³ /day |
| Total Flow at S5 (including Proposed and Planned Development + Catchment A & B & C) | = | 2,271.9 m ³ /day |
| Total Flow at S6 (including Proposed and Planned Development + Catchment A & B & C) | = | 2,271.9 m ³ /day |
| Total Flow at S7 (including Proposed and Planned Development + Catchment A & B & C) | = | 2,271.9 m ³ /day |
| Total Flow at S8 (including Proposed and Planned Development + Catchment A & B & C) | = | 2,271.9 m ³ /day |
| Total Flow at S9 (including Proposed and Planned Development + Catchment A & B & C) | = | 2,271.9 m ³ /day |
| Total Flow at S10 (including Proposed and Planned Development + Catchment A & B & C) | = | 2,271.9 m ³ /day |
| Total Flow at S11 (including Proposed and Planned Development + Catchment A & B & C) | = | 2,271.9 m ³ /day |
| Total Flow at S12 (including Proposed and Planned Development + Catchment A & B & C & D) | = | 2,574.1 m ³ /day |
| Total Flow at S13 (including Proposed and Planned Development + Catchment A & B & C & D) | = | 2,574.1 m ³ /day |

Table 4a Comparison of the Hydraulic Capacity of Existing Sewers for Sewerage generated from the Proposed Development and Surrounding Catchment Areas (Existing Condition)

Hydraulic Capacity of Existing Sewers

| S12-S13 | FMH4042678 | FG4003341 | 400 | 10.1 | 282.1 | -0.76 | -1.84 | -0.36 | - | 3.87 | 3.97 | 4.23 | - | 0.04 | 0.09 | 9.81 | 0.0006 | 0.0035 | 1E-06 | 1.11 | 0.13 | 0.14 | 139.4 |

- Note:
1. Boundary condition is set at S12 where free-flow condition is expected. Therefore, backwater calculation is conducted upstream manhole S12. Foulwater level at S12 is assumed to be: -0.76 (IL) + 0.400 (pipe dia.) = -0.36mPD as a conservative approach
 2. For this assessment, the Colebrook-White Equation has been used to calculate the friction loss. (Sewerage Manual section 5.2.1)
 3. According to DSD's Sewerage Manual (Part 1) section 5.2.2, Local losses are usually small in relation to the pipeline head losses and are not normally considered. However, as a conservative approach, further allowances have been included for local losses at pipe entry (K=0.5) and exit (K = 1), with a total local loss coefficient of 1.5
 4. Comparing the cover levels and foulwater levels at each manhole, the freeboards are found sufficient (>1m). Therefore, no unacceptable adverse sewerage impacts are identified.
 5. Friction loss is deduced by required hydraulic gradient x pipe length, while the local loss is deduced by the equation:

$$h_f = K \frac{V^2}{2g}$$

Table 5b Hydraulic Capacity of Existing Sewers along Wai Yip Street - surcharge condition with 1.15 safety factor

| Segment | Manhole Reference | Manhole Reference | Pipe Dia. mm | Pipe Length m | Chainage m | Invert Level 1 mPD | Invert Level 2 mPD | Foulwater Level 1 mPD | Foulwater Level 2 mPD | Cover Level 1 mPD | Cover Level 2 mPD | Freeboard 1 m | Freeboard 2 m | Friction Loss m | Entry and Exit Loss m | g m/s ² | k _s m | Required Hydraulic v m ² /s | V m/s | Area m ² | Q m ³ /s | Required Peak Flow L/s | |

| S11-S12 | FMH4042677 | FMH4042678 | 400 | 3.6 | 278.5 | -0.74 | -0.76 | -0.21 | -0.36 | 3.79 | 3.87 | 4.00 | 4.23 | 0.02 | 0.13 | 9.81 | 0.0006 | 0.0049 | 1E-06 | 1.31 | 0.13 | 0.16 | 164.8 |
| S12-S13 | FMH4042678 | FG4003341 | 400 | 10.1 | 282.1 | -0.76 | -1.84 | -0.36 | - | 3.87 | 3.97 | 4.23 | - | 0.05 | 0.12 | 9.81 | 0.0006 | 0.0046 | 1E-06 | 1.28 | 0.13 | 0.16 | 160.4 |

- Note:
1. Boundary condition is set at S12 where free-flow condition is expected. Therefore, backwater calculation is conducted upstream manhole S12. Foulwater level at S12 is assumed to be: -0.76 (IL) + 0.400 (pipe dia.) = -0.36mPD as a conservative approach
 2. For this assessment, the Colebrook-White Equation has been used to calculate the friction loss. (Sewerage Manual section 5.2.1)
 3. According to DSD's Sewerage Manual (Part 1) section 5.2.2, Local losses are usually small in relation to the pipeline head losses and are not normally considered. However, as a conservative approach, further allowances have been included for local losses at pipe entry (K=0.5) and exit (K = 1), with a total local loss coefficient of 1.5
 4. Comparing the cover levels and foulwater levels at each manhole, no overflowing is found (freeboard >0m). Therefore, no unacceptable adverse sewerage impacts are identified.
 5. Friction loss is deduced by required hydraulic gradient x pipe length, while the local loss is deduced by the equation:

$$h_f = K \frac{V^2}{2g}$$

Calculations of Maximum Allowable Sound Power Levels

1. INTRODUCTION

1.1 Project Background

- 1.1.1 The Application Site at 107-109 Wai Yip Street, Kwun Tong, is zoned as “Other Specified Uses (Business)” (OU(B)) under the Kwun Tong (South) Outline Zoning Plan (OZP) No. S/K14S/25, with site area of about 1,171 m². This planning application is to seek permission from the Town Planning Ordinance (the Board) in support of the proposed development, which will be developed into a residential care home for the elderly (RCHE) and hotel (hereafter referred to as the “Proposed Development”).
- 1.1.2 Ramboll Hong Kong Limited has been commissioned by the Applicant to conduct this Environmental Assessment (EA) for the subject planning application.

1.2 Application Site and its Environs

- 1.2.1 The Application Site is bounded by Tai Yip Street to the north and Wai Yip Street to the south. It is surrounded by industrial buildings to the north, west and east.
- 1.2.2 **Figure 1.1** shows the location of the Application Site and its environs. The Application Site is currently vacant and was occupied by an office building, Hsin Chong Centre, previously.

1.3 Proposed Development

- 1.3.1 The Proposed Development comprises a 33-storey (including one basement level) RCHE and hotel with a total GFA of about 16,856 m². The maximum building height is at 115 mPD. The indicative layout plan of the Proposed Development is shown in **Appendix 1.1**.

1.4 Scope

- 1.4.1 The Project will involve excavation, foundation and superstructure construction works. Potential noise, water quality and waste management impacts arising from the construction activities are expected. Although detailed construction programme and plant inventory are not available at this early planning stage, for project of this scale, these potential environmental impacts can be controlled with the implementation of proper site practices and pollution control measures stipulated in the “Recommended Pollution Control Clauses for Construction Contracts” issued by the EPD. As such, no adverse noise, water quality and waste management impact during the construction of the Proposed Development is anticipated and have been scoped out in this EA Report.
- 1.4.2 As mentioned in **Section 1.2**, the Application Site is currently vacant and was previously occupied by an office building. There is no anticipated land contamination from past or current land use at the site. According to the aerial photos from the Lands Department, the site was occupied by an office building since 1973 until it turned into an open carpark for private vehicle in 2020, after which the site has remained vacant. The selected aerial photos showing the historical conditions of the Application Site are presented in **Appendix 1.2**. Consequently, there are no concerns regarding land contamination for the Proposed Development, and land contamination has been excluded from this EA Report.
- 1.4.3 The future use of the Proposed Development, which includes a RCHE and a hotel, is non-polluting by nature. With proper connection of drainage and sewerage system and regular disposal of general refuse, no adverse water quality and waste management impacts are expected during the operation phase. Therefore, operation phase water quality and waste management impacts have been scoped out in this EA report.

1.4.4 This EA will focus on the assessment of air quality (including construction dust) and noise impacts associated with the Proposed Development.

2. AIR QUALITY

2.1 Introduction

2.1.1 The aim of this study is to assess the potential air quality impact arising from traffic emissions along the road carriageways surrounding the Application Site and the chimney emission from industrial stack in the vicinity of the Application Site, if identified, during the operation of the Proposed Development.

2.2 Legislation, Standards, Guidelines and Criteria

Air Pollution Control Ordinance (Cap.311)

2.2.1 The Air Pollution Control Ordinance (APCO) and its subsidiary regulations provide the statutory control on air pollutants from a variety of sources. The APCO makes provision for abating, prohibiting and controlling emissions of any solid, particulate, liquid, vapour, objectionable odours or gaseous substances into the atmosphere. The whole of the HKSAR has been covered by Air Control Zones. The Hong Kong Air Quality Objectives (AQOs) stipulate maximum acceptable concentration of air pollutants. The Air Pollution Control (Amendment) Ordinance 2021 has come into operation since 1 January 2022 to tighten three AQOs. The prevailing AQOs is shown in **Table 2.1**.

Table 2.1 Hong Kong Air Quality Objectives

| Pollutant | Averaging Time | Concentration Limit ($\mu\text{g}/\text{m}^3$) ^(a) | Number of Exceedances allowed per year |
|---|----------------|---|--|
| Sulphur dioxide, SO ₂ | 10-minute | 500 | 3 |
| | 24-hour | 50 | 3 |
| Respirable suspended particulates, RSP (PM ₁₀) ^(b) | 24-hour | 100 | 9 |
| | Annual | 50 | Not applicable |
| Fine suspended Particulates, FSP (PM _{2.5}) ^(c) | 24-hour | 50 | 35 |
| | Annual | 25 | Not applicable |
| Nitrogen dioxide, NO ₂ | 1-hour | 200 | 18 |
| | Annual | 40 | Not applicable |
| Ozone, O ₃ | 8-hour | 160 | 9 |
| Carbon monoxide, CO | 1-hour | 30,000 | 0 |
| | 8-hour | 10,000 | 0 |
| Lead | Annual | 0.5 | Not applicable |

Notes:

(a) All measurements of the concentration of gaseous air pollutants, i.e., sulphur dioxide, nitrogen dioxide, ozone and carbon monoxide, are to be adjusted to a reference temperature at 293 K and 101.325 kPa

(b) Respirable suspended particulates in air with a nominal aerodynamic diameter of 10 μm or less

(c) Fine suspended particulates in air with a nominal aerodynamic diameter of 2.5 μm or less

Air Pollution Control (Construction Dust) Regulation

2.2.2 Notifiable and regulatory works are controlled under the Air Pollution Control (Construction Dust) Regulation. Notifiable works include site formation, reclamation, demolition, foundation works and superstructure construction for buildings and road construction. Regulatory works concern building renovation, road opening and resurfacing, slope stabilisation, and other activities including stockpiling, dusty material handling, excavation, concrete works, etc.

2.2.3 The construction works implemented for the Project are both regulatory and notifiable works due to activities including material stockpiling and dusty material handling as

potential sources of fugitive dust emissions as detailed in Part I to IV of the Schedule on Dust Control Requirements.

Air Pollution Control (Non-road Mobile Machinery) (Emission) Regulation

2.2.4 The Air Pollution Control (Non-road Mobile Machinery) (Emission) Regulation, which aims to control emissions from non-road mobile machinery (NRMMs) to improve air quality, became effective on 1 June 2015. NRMMs include non-road vehicles, as well as mobile machines and equipment (regulated machines) such as crawler cranes, excavators and air compressors.

2.2.5 Under the regulation, regulated machines have to comply with the Stage IIIA emission standards of the European Union (EU). It also requires all regulated machines sold or leased for use in Hong Kong to bear an approval or exemption label issued to them by the EPD, starting from 1 September 2015. It restricts specified activities and locations including construction sites, designed waste disposal facilities and specified processes to use only NRMMs that bear an approval or exemption label issued to them by the EPD, with effect from 1 December 2015.

Recommended Pollution Control Clauses for Construction Contracts

2.2.6 The Recommended Pollution Control Clauses (RPCC) are generally good engineering practice to minimize inconvenience and environmental nuisance to nearby residents and other sensitive receivers. The Contractor shall undertake environmental protection measures to reduce the environmental impacts arising from the execution of the Works and to minimise the effects on the air, noise, water quality as well as nuisance of waste within and outside the Site, on transport routes and at the loading, dredging and dumping areas.

Hong Kong Planning Standards and Guidelines (HKPSG)

2.2.7 Table 3.1 of the Chapter 9 (Environment) of the Hong Kong Planning Standards and Guidelines (HKPSG) shows the minimum horizontal buffer distance between kerb side of roads and sensitive uses for various types of roads, and also shows the recommended buffer distance between industrial sites with chimneys and sensitive uses. The mentioned recommendations are extracted and shown in **Table 2.2** below.

Table 2.2 Guidelines on Usage of Air Sensitive Uses

| Pollution Source | Parameter | Buffer Distance | Permitted Uses |
|-------------------|--|---------------------------|--------------------------------------|
| Road and Highways | <i>Type of Road</i> | | |
| | Trunk Road and Primary Distributor | >20m | Active and passive recreational uses |
| | | 3 – 20m | Passive recreational uses |
| | | <3m | Amenity areas |
| | District Distributor | >10m | Active and passive recreational uses |
| | | <10m | Passive recreational uses |
| | Local Distributor | >5m | Active and passive recreational uses |
| <5m | | Passive recreational uses | |
| Under Flyovers | | Passive recreational uses | |
| Industrial Areas | <i>Difference in Height between Industrial Chimney Exit and the Site</i> | | |
| | <20m | >200m | Active and passive recreational uses |
| | | 5 – 200m | Passive recreational uses |
| | 20 – 30m (*) | >100m | Active and passive recreational uses |
| | | 5 – 100m | Passive recreational uses |

| Pollution Source | Parameter | Buffer Distance | Permitted Uses |
|--|-----------|-----------------|--------------------------------------|
| | 30 – 40m | >50m | Active and passive recreational uses |
| | | 5 – 50m | Passive recreational uses |
| | >40m | >10m | Active and passive recreational uses |
| Construction and earth moving Activities | - | <50m | Passive recreational uses |
| | | >50m | Active and passive recreational uses |

Remarks:

- In situations where the height of chimneys is not known, use the set of guidelines marked with an asterisk for preliminary purpose and refine as and when more information is available.
- The buffer distance is the horizontal, shortest distance from the boundary of the industrial lot, the position of existing chimneys or the edge of road kerb, to the boundary of open space sites.
- The guidelines are generally applicable to major industrial areas but NOT individual large industrial establishments which are likely to be significant air pollution sources. Consult EPD when planning open space sites close to such establishments.
- Amenity areas are permitted in any situation.

2.2.8 Section 3.3.9 of the HKPSG recommends that a buffer distance of at least 200m from air sensitive uses should be provided for odour sources.

2.3 Review of Baseline Air Quality

Historical Ambient Air Quality

2.3.1 The nearest Air Quality Monitoring Station (AQMS) to the Proposed Development is the Kwun Tong AQMS. The ambient air quality measured at Kwun Tong AQMS in Year 2019 to Year 2023 is shown in **Table 2.3**. The data is analysed and presented to align with the averaging periods and provide statistics of the number of exceedances against those allowed in the prevailing AQOs. The comparison has enabled a check of the compliance status from the perspective of the prevailing AQOs.

2.3.2 The 5-year arithmetic mean of the background air quality levels in different averaging periods (10-min, 1-hour, 8-hour, 24-hour and 1-year) have been computed and are taken to be representative of the area where the Proposed Development is situated.

Table 2.3 Air Pollutant Concentrations Measured at EPD's Kwun Tong AQMS

| Pollutant | Averaging time | Parameter | Prevailing AQO ($\mu\text{g}/\text{m}^3$) | Concentration ^[1] ($\mu\text{g}/\text{m}^3$) | | | | |
|--------------------------|----------------|--------------------------|---|---|------|------|------|------|
| | | | | 2019 | 2020 | 2021 | 2022 | 2023 |
| RSP (PM ₁₀) | 24-hour | 10 th highest | 100 | 73 | 67 | 72 | 49 | 57 |
| | Annual | Maximum | 50 | 38 | 32 | 31 | 24 | 26 |
| FSP (PM _{2.5}) | 24-hour | 36 th highest | 50 | 34 | 27 | 28 | 26 | 25 |
| | Annual | Maximum | 25 | 21 | 16 | 17 | 14 | 15 |
| NO ₂ | 1-hour | 19 th highest | 200 | 184 | 153 | 164 | 145 | 147 |
| | Annual | Maximum | 40 | 45 | 43 | 49 | 45 | 41 |
| SO ₂ | 10-minute | 4 th highest | 500 | 41 | 24 | 24 | 19 | 29 |
| | 24-hour | 4 th highest | 50 | 11 | 8 | 7 | 11 | 10 |

| Pollutant | Averaging time | Parameter | Prevailing AQO (µg/m ³) | Concentration ^[1] (µg/m ³) | | | | |
|----------------|----------------|--------------------------|-------------------------------------|---|------|------|------|------|
| | | | | 2019 | 2020 | 2021 | 2022 | 2023 |
| O ₃ | 8-hour | 10 th highest | 160 | 150 | 126 | 136 | 148 | 136 |

Note:

[1] Bolded and underlined values exceed the relevant AQO.

[2] CO is not measured at the Kwun Tong AQMS.

2.3.3 The concentration of all air pollutants was within the relevant AQOs, except the annual NO₂ level, which was exceeded in the past five years. NO₂ is mainly formed from the oxidation of nitric oxide (NO) emitted from fuel combustion. The high NO₂ level is likely due to the emission from road traffic.

Simulated Background Air Quality

2.3.4 The simulated background levels available from EPD’s PATH v3.0 model at Grid (44,33) that coincide with the Application Site have also been compared. Background air quality levels from the Year 2030 are considered applicable since the Proposed Development is expected to be completed by 2029.

2.3.5 The simulated background air quality in Year 2030 has been analysed similarly and presented in **Table 2.4**.

Table 2.4 Future Predicted Background Air Quality in Year 2030

| Air Pollutant | Averaging Period | Path Grid | Prevailing AQOs |
|-----------------|---------------------------------------|------------|-----------------|
| | | 44,33 | |
| SO ₂ | 10-min (4 th highest) | 21 | 500 (a) |
| | 24-hour (4 th highest) | 7 | 50 (a) |
| NO ₂ | 1-hour (19 th highest) | 88 | 200 (b) |
| | Annual | 17 | 40 |
| RSP | 24-hour (10 th highest) | 52 | 100 (c) |
| | Annual | 20 | 50 |
| FSP | 24-hour (36 th highest) | 26 | 50 (d) |
| | Annual | 12 | 25 |
| O ₃ | 8-hour (10 th highest) | 170 | 160 (c) |
| CO | 1-hour (1 st highest) | 527 | 30,000 |
| | 8-hour (1 st highest) | 503 | 10,000 |

Notes:

- (a) Not to exceed more than 3 times per year.
- (b) Not to exceed more than 18 times per year.
- (c) Not to exceed more than 9 times per year.
- (d) Not to exceed more than 35 times per year.
- (e) Bolded and underlined values exceed the relevant AQO.

2.3.6 The predicted PATH ambient air quality level of most pollutants would be below the AQOs limit, except for the daily 8-hour moving average O₃. Ozone is a product of photochemical reactions of NO_x and volatile organic compounds (VOCs) instead of being emitted directly from human activities. In the presence of NO_x (a common roadside pollutant), ozone will be broken down into oxygen. Since NO_x concentration is low, the ozone scavenging effect is small and results in a generally high level, exceeding the AQOs.

2.4 Air Sensitive Receivers (ASRs)

2.4.1 Air Sensitive Receivers (ASRs) have been identified in accordance with the HKPSG and Annex 12 of the EIAO-TM.

2.4.2 The existing ASRs are identified with reference to the latest information provided on the survey maps, Outline Zoning Plan, topographic maps, aerial photos and land status. The first layer of existing ASRs located closest to the Application Site have been identified as the representative ASRs. Details of the representative ASRs are summarised in **Table 2.5** and indicated in **Figure 2.1**.

Table 2.5 Summary of Representative ASRs

| ASR ID | Descriptions | Use | No. of Storeys | Approximate Minimum Horizontal Distance to Project Site (m) |
|----------------------|---------------------------------|---------------------------|----------------|---|
| Existing ASRs | | | | |
| A01 | Red Square | Industrial | 11 | <1 |
| A02 | Peter Leung Industrial Building | Industrial | 12 | 9 |
| A03 | On Cheong Factory Building | Industrial | 8 | 12 |
| A04 | Winful Industrial Building | Industrial | 13 | 6 |
| A05 | Yat Sang Industrial Building | Industrial | 11 | 6 |
| A06 | Kevin Wong Development Building | Industrial | 12 | 6 |

2.5 Air Quality Impact Assessment

Construction Phase

2.5.1 During the construction of the Proposed Development, the potential air quality impact on the nearby existing ASRs is related to dust nuisance from material handling, wind erosion of exposed area, gaseous emissions (sulphur dioxide (SO₂) and nitrogen dioxide (NO₂)) and PM emissions (respirable suspended particulates (PM₁₀) and fine suspended particulates (PM_{2.5})) from construction equipment and vehicles.

2.5.2 The total area of the Application Site is only about 1,171m². As the project is still in the early planning stage, detailed construction information is not available at this stage. Construction dust control measures listed in the Air Pollution Control (Construction Dust) Regulation of the APCO and the proposed mitigation measures as presented in **Section 2.6** should be closely followed during the construction period in order to ensure fugitive dust and gaseous emission would be controlled and no adverse air quality impact is anticipated at the identified ASRs considering the site is relatively small.

2.5.3 For construction plants to be used on-site, requirements stipulated in the Air Pollution Control (Non-road Mobile Machinery) (Emission) Regulation will be followed to control potential emissions from non-road mobile machinery during the construction phase. Therefore, the air quality impact arising from gaseous and PM emissions by construction plants is considered minimal.

Operation Phase

2.5.4 Given that the future use of the Proposed Development includes a RCHE and a hotel, no specific air pollution sources are anticipated during the operation. A carpark is proposed in the basement of the development. The proposed carpark will accommodate private vehicles and will be designed and operated in accordance with the requirements outlined in EPD’s ProPECC PN 2/96 on Control of Air Pollution in Car Parks. As it is still in the early planning stage, the exhaust outlet of the carpark has not yet been determined. The exhaust outlet shall be located away from any nearby ASRs as far as possible to minimize the air quality impact.

2.5.5 The presence of any off-site air pollution sources that can affect the Proposed Development are discussed below.

Vehicular Emission

2.5.6 With reference to **Annual Traffic Census 2023** published by Transport Department, Wai Yip Street, located to the south of the Application Site, is classified as a Primary Distributor. According to **Table 2.2**, a buffer separation of at least 20m is recommended between the kerb side of a Primary Distributor and the air sensitive uses.

2.5.7 **Figure 2.2** shows the buffer distance from Wai Yip Street to the Application Site. Most part of the building will be located within the 20m buffer zone, except the façade facing the back lane. The Proposed Development will adopt centralised air-conditioning

system with fresh air supply, which can ensure adequate ventilation in the building without relying on openable windows. It has been confirmed that there will be no air sensitive use/ fresh air intake/ openable window¹ within the buffer zone. The fresh air intake point will be positioned outside the buffer zone, at about 24m from the kerb side of Wai Yip Street. As such, the fresh air intake point location complies with the HKPSG requirement and no adverse vehicular emission impact is anticipated.

Industrial Emission

- 2.5.8 A site visit was carried out in March 2024 and two chimneys have been identified within 200m of the Application Site, which are located at Wing Tai Factory Building and United Overseas Plaza, respectively. The chimney at Wing Tai Factory Building belongs to a laundry shop. As advised by the owner of the laundry shop, the chimney at Wing Tai Factory Building is abandoned and no longer in use.
- 2.5.9 The chimney at United Overseas Plaza is reported to be still active according to the management office of United Overseas Plaza. As shown in **Figure 2.2**, the location of the fresh air intake point is located beyond 200m from the chimney, satisfying HKPSG's recommended buffer distance for industrial uses of 200m as presented in **Table 2.2**. With the provision of adequate buffer distance for chimneys, adverse air quality impacts from chimney emissions are not anticipated at the Proposed Development.

Odour Emission

- 2.5.10 No odour sources were identified within 200m of the Application Site during the site visit. Air quality impact related to odour emission is not anticipated.

2.6 Mitigation Measures and Recommendations

Construction Phase

- 2.6.1 Air quality control measures stipulated under the Air Pollution Control (Construction Dust) Regulation, together with proper site management/practice and good housekeeping are required to mitigate the potential air quality impacts on the nearby ASRs. Requirements stipulated in the Air Pollution Control (Non-road Mobile Machinery) (Emission) Regulation will also be followed to control potential emissions from non-road mobile machinery during the construction phase. "Recommended Pollution Control Clauses for Construction Contracts" available on EPD website also contains the recommended control measures to be implemented during construction. The control measures detailed below shall also be incorporated into the Contract Specification where practicable as an integral part of good construction practices:
- All demolished items (including trees, shrubs, vegetation, boulders, poles, pillars, structures, debris, rubbish and other items arising from site clearance) that may dislodge dust particles shall be covered entirely by impervious sheeting or placed in an area sheltered on the top and the 3 sides within a day of demolition;
 - Where a site boundary adjoins a road, streets or other accesses to the public, hoarding of not less than 2.4 m high from ground level should be provided along the entire length except for a site entrance or exit;
 - The working area of any excavation or earth-moving operation shall be sprayed with water or a dust suppression chemical immediately before, during and immediately after the operation so as to maintain the entire surface wet;
 - Use of regular watering to reduce dust emissions from exposed site surfaces and unpaved roads, particularly during dry weather;

¹ Windows are not opened under normal circumstances, except for maintenance purpose.

- Use of frequent watering for particularly dusty construction areas and areas close to ASRs;
- Side enclosure and covering of any aggregate or dusty material storage piles to reduce emissions. Where this is not practicable owing to frequent usage, watering shall be applied to aggregate fines;
- Open stockpiles (if any) shall be avoided or covered. Prevent placing dusty material storage piles near ASRs;
- Any stockpile of dusty materials shall be either covered entirely by impervious sheeting; placed in an area sheltered on the top and the 3 sides; or sprayed with water or a dust suppression chemical so as to maintain the entire surface wet.
- Tarpaulin covering of all dusty vehicle loads transported to, from and between site locations;
- Establishment and use of vehicle wheel and body washing facilities at the exit points of the Site;
- Imposition of speed controls for vehicles on unpaved site roads, 8 km per hour is the recommended limit;
- Routing of vehicles and position of construction plant should be at the maximum possible distance from ASRs;
- Every stock of more than 20 bags of cement or dry pulverized fuel ash (PFA) should be covered entirely by impervious sheeting or placed in an area sheltered on the top and the 3 sides;
- Cement or dry PFA delivered in bulk should be stored in a closed silo fitted with an audible high-level alarm which is interlocked with the material filling line and no overfilling is allowed;
- Cement, PFA or any other dusty materials collected by fabric filters or other air pollution control system or equipment shall be disposed of in totally enclosed containers;
- Silos used for the storage of cement or dry pulverized fuel ash shall not be overfilled;
- Loading, unloading, transfer, handling or storage of bulk cement or dry PFA should be carried out in a totally enclosed system or facility, and any vent or exhaust should be fitted with an effective fabric filter or equivalent air pollution control system;
- The electric power supply shall be provided for on-site machinery as far as practicable and diesel generators shall be avoided to minimize the gaseous and PM emissions;
- Avoid using exempted NRMMS as far as practicable;
- Locate all the dusty activities away from any nearby ASRs as far as practicable; and
- Erection of higher hoarding at the locations with ASRs in immediate proximity to the Application Site boundary.

Operation Phase

As the fresh air intake point of the Proposed Development has incorporated adequate buffer distance from the nearby roads and active chimneys, no further mitigation measures are proposed. The proposed carpark shall be designed and operated in

accordance with the requirements outlined in EPD's ProPECC PN 2/96 on Control of Air Pollution in Car Parks.

3. NOISE

3.1 Potential Noise Source

- 3.1.1 The Proposed Development is surrounded by clusters of industrial and commercial buildings. The traffic road network in the vicinity of the Proposed Development and the ventilation equipment at the nearby industrial and commercial buildings have been identified as the major noise source. However, as the Proposed Development will have a centralised air-conditioning system and do not rely on openable windows for ventilation, adverse traffic noise and fixed noise impact on the Proposed Development are not anticipated.
- 3.1.2 On the other hand, as the Proposed Development will have a centralised air-conditioning system, potential fixed plant noise source i.e. cooling towers/ chillers, will be installed at the Proposed Development. The location of the cooling towers/chillers is not confirmed yet, which can be located at the podium, inside the plant room or at the rooftop. As the Proposed Development is surrounded by industrial and commercial buildings, locating the cooling towers/ chillers at the rooftop with sightline to noise sensitive receivers is assumed for conservative assessment.

3.2 Nearby Noise Sensitive Receivers

- 3.2.1 There are mainly industrial and commercial development in the vicinity of the Application Site. The nearest noise sensitive receiver (NSR) which will have a line of sight to the cooling towers/ chillers of the Proposed Development is the Foo Yue Building at Ting Fu Street, which is located about 140m to the north of the Proposed Development as shown in **Figure 3.1**. This NSR is chosen for fixed noise impact assessment.

3.3 Fixed Noise Impact Assessment

- 3.3.1 The IND-TM sets out the appropriate Acceptable Noise Level (ANL) for fixed noise source which are dependent on the Area Sensitivity Ratings (ASRs) of the NSRs. According to Table 4.1 of HKPSG Chapter 9, the planned fixed noise source shall comply with 5dB(A) below the ANL shown in **Table 3.1** or the prevailing background noise level, whichever lower.
- 3.3.2 Considering that the nearest NSR is close to Kwun Tong Road and Kai Fuk Road with busy traffics as well as MTR Kwun Tong Line, the prevailing background noise levels is very likely to be higher than ANL-5. Therefore, ANL-5 is adopted as the noise criteria for the assessment.

Table 3.1 Acceptable Noise Levels (ANLs)

| Time Period | ANL on Different Area Sensitivity Rating (Leq, 30min, dB(A)) | | |
|------------------------------|---|-------|-------|
| | ASR A | ASR B | ASR C |
| Day (0700 to 1900 hours) | 60 | 65 | 70 |
| Evening (1900 to 2300 hours) | | | |
| Night (2300 to 0700 hours) | 50 | 55 | 60 |

- 3.3.3 According to the **Annual Traffic Census 2023**, Kwun Tong Road and Kai Fuk Road with annual average daily traffic flow (AADT) lower than 30,000 are not considered as an influencing factor. Foo Yue Building is located in urban area and is not affected by the influencing factor, an ASR of "B" has been assumed and adopted for this NSR in the assessment.

- 3.3.4 Based on standard acoustic principle for attenuation ($20 \times \log(\text{distance}) + 8$) and façade correction (+3 dB(A)), the maximum allowable sound power levels of the ventilation equipment of the Proposed Development are back calculated as 102 dB(A) for daytime and evening time (0700 – 2300 hours) and 92 dB(A) for night time (2300 – 0700 hours), assuming no screening correction applied. Calculations of maximum allowable sound power levels is provided in **Appendix 3.1**. Depending on the detailed design of the Proposed Development, should screening structure be incorporated into the design, the maximum allowable sound power levels could be adjusted. Provided that the future design on ventilation equipment of the centralised air-conditioning system is designed in compliance with the requirement of the IND-TM and the HKPSG, no adverse fixed noise impact is anticipated at Foo Yue Building.

3.4 Discussion

- 3.4.1 The Proposed Development will be equipped with central air-conditioning system and will not rely on openable windows for ventilation under normal circumstances. Therefore, traffic noise and industrial noise from the surroundings would not cause adverse noise impact on the Proposed Development.
- 3.4.2 The cooling towers/ chillers of the Proposed Development may cause potential fixed noise impact to the surrounding NSRs. The equipment will be designed to meet the relevant noise criteria stipulated in the HKPSG and the IND-TM and incorporate at-source noise mitigation measures as necessary. As such, potential fixed noise impact due to the proposed development is not anticipated.

4. OVERALL CONCLUSION

- 4.1.1 With the implementation of mitigation measures as defined in the Air Pollution Control (Construction Dust) regulation and good site practices as stated in **Section 2.6**, no adverse construction air quality impact is anticipated.
- 4.1.2 The Application Site is bounded by Wai Yip Street and an active chimney is identified within 200m of the Site. The fresh air intake point for the central air-conditioning system is carefully positioned beyond 200m from the chimney and beyond 20m from Wai Yip Street. Adequate buffer distance from both the road and the chimney is provided in accordance with the requirements outlined in the HKPSG. Therefore, no adverse vehicular and chimney emission impacts are anticipated. Additionally, no odour sources were identified within 200m of the Application Site, so no odour emission impact is expected.
- 4.1.3 The Proposed Development will be equipped with central air-conditioning system and will not rely on openable windows for ventilation under normal circumstances. Therefore, traffic noise and industrial noise from the surroundings would not cause adverse noise impact on the Proposed Development. The cooling towers/ chillers on the rooftop of the Proposed Development will be appropriately designed to meet the relevant noise criteria stipulated in the HKPSG and the Noise Control Ordinance.
- 4.1.4 In conclusion, this EA confirms the overall acceptability from the air quality and noise perspectives.

1.0 INTRODUCTION

Background

- 1.1 The Subject Site is located at Nos. 107 – 109 Wai Yip Street in Kwun Tong, which is now vacant. **Figure 1.1** shows the location of the Subject Site.
- 1.2 On 29th May 2020, the Town Planning Board (“TPB”) approved the S16 Planning Application for Office, Shop and Services & Eating Place Uses at 107-109 Wai Yip Street (TPB ref: A/K14/780) (“Approved S16 Scheme”). The Applicant has the intention to rezone the Subject Site and construct residential care home for the elderly (“RCHE”) and a hotel (together known as “Proposed Development”).
- 1.3 CKM Asia Limited, a traffic and transportation planning consultancy firm, was commissioned by the Applicant, to conduct a traffic impact assessment (“TIA”) in support of Proposed Development. This report describes the traffic study undertaken.

Scope of the Assessment

- 1.4 The main objectives of this TIA are as follows:
 - To assess the existing traffic issues in the vicinity of the subject site;
 - To quantify the traffic and pedestrians generated by the Proposed Development; and
 - To examine the traffic and pedestrian impact on the local road network in the vicinity of the subject site.

Contents of the Report

- 1.5 After this introduction, the remaining chapters contain the following:

| | |
|---------------|---|
| Chapter Two | - describes the existing situation; |
| Chapter Three | - outlines the development proposal; |
| Chapter Four | - presents the traffic impact analysis; |
| Chapter Five | - presents the pedestrian impact analysis |
| Chapter Six | - presents the traffic and pedestrian sensitivity test; and |
| Chapter Seven | - summarises the overall conclusion. |

2.0 THE EXISTING SITUATION

The Subject Site

- 2.1 The Subject Site fronts onto Wai Yip Street to the south, and is bounded by a service lane to the north. The section of Wai Yip Street fronting the Subject Site is a dual carriageway 3-lane road.

Traffic Survey

- 2.2 To quantify the traffic flows at the junctions chosen for the capacity analysis, manual classified counts were conducted on Friday, 15th March 2024 during the AM and PM peak periods. The locations of the surveyed junctions are presented in **Figure 2.1** and their layout is shown in **Figures 2.2 to 2.11**.

- 2.3 The surveyed junctions include the following:

- J1: Hoi Bun Road / Shun Yip Street;
- J2: Wai Yip Street / Shun Yip Street;
- J3: Tai Yip Street / Service Lane;
- J4: Hong Tak Road / Tai Yip Street;
- J5: Tai Yip Street / Tai Yip Lane;
- J6: Kwun Tong Road / Hong Tak Road;
- J7: Wai Yip Street / Lai Yip Street;
- J8: Kwun Tong Road / Lai Yip Street;
- J9: Hoi Bun Road / Lai Yip Street and;
- J10: Lai Yip Street / Hung To Road

- 2.4 The counts were classified by vehicle type to enable traffic flows in passenger car units (“pcu”) to be calculated. From the survey, the AM and PM peak hours were found to be between 0845 – 0945 and 1730 – 1830 hours respectively.

Adjustment of the traffic flows obtained from the traffic survey

- 2.5 The traffic flows obtained from the traffic surveys conducted in March 2024 were reviewed against the traffic flows of the Traffic Impact Assessment of other approved planning applications and found to be of similar order. Nevertheless, adjustment of the traffic flows obtained from the traffic survey is made based on the Annual Average Daily Traffic (“AADT”) of Annual Traffic Census (“ATC”) station 3020 Wai Yip Street (from Lai Yip Street to Hoi Yuen Road), in order to produce adjusted annual average traffic flows.

- 2.6 AADT is only available up to 2023. However, the AADT for 2019 is not considered due to the impact of the social events, and the AADT for 2020 to 2023 are also not considered due to the impact of the COVID-19 pandemic. Hence, reference is made to 2018 AADT. The 2018 monthly variation in the AADT for ATC station 3020 – Wai Yip Street in Kwun Tong, is found in **Chart A**.

CHART A: 2018 Monthly AADT Variation for ATC Station 3020

2.7 Chart A shows that the AADT for the month of March, is around 2% lower than the annual average. In view that the traffic survey for the captioned project was conducted in March, the monthly variation factor of 1.02 (*Calculation: 1 / 0.98 = 1.02*) is applied to the traffic flows. The adjusted peak hour traffic flows are presented in **Figure 2.12**.

Operational Performance of the Surveyed Junctions

2.8 The existing operational performance of the surveyed junctions is calculated based on the observed traffic counts and the analysis is undertaken using the methods outlined in Volume 2 of Transport Planning and Design Manual (“TPDM”). The existing operational performance of the surveyed junctions are summarised in **Table 2.1** and the detailed calculations are found in **Appendix 1**.

TABLE 2.1 EXISTING JUNCTION OPERATIONAL PERFORMANCE

| Ref | Junction | Type of Junction | Parameter ⁽¹⁾ | AM Peak | PM Peak |
|-----|--|------------------|--------------------------|---------|---------|
| J1 | Hoi Bun Road / Shun Yip Street | Signal | RC | 56% | 43% |
| J2 | Wai Yip Street / Shun Yip Street | Signal | RC | 66% | 62% |
| J3 | Tai Yip Street / Service Lane | Priority | RFC | 0.016 | 0.010 |
| J4 | Hong Tak Road / Tai Yip Street | Priority | RFC | 0.226 | 0.181 |
| J5 | Tai Yip Street / Tai Yip Lane | Priority | RFC | 0.058 | 0.025 |
| J6 | Kwun Tong Road / Hong Tak Road | Priority | RFC | 0.365 | 0.454 |
| J7 | Wai Yip Street / Lai Yip Street | Signal | RC | 69% | 87% |
| J8 | Kwun Tong Road / Lai Yip Street | Signal | RC | 58% | 43% |
| J9 | Hoi Bun Road / Lai Yip Street | Signal | RC | 81% | 87% |
| J10 | Lai Yip Street / Hung To Road ⁽²⁾ | Signal | RC | 85% | 104% |

Notes: ⁽¹⁾ RC – Reserve Capacity RFC – Ratio of Flow to Capacity

⁽²⁾ Kerbside on-street activities are reflected in the junction performance

2.9 The results in **Table 2.1** indicate that the junctions now operate with capacities during the AM and PM peak hours.

Pedestrian Facilities

2.10 There are good pedestrian facilities provided in the vicinity of the Subject Site, including footpaths, and at-grade pedestrian crossings are provided at the signalised road junctions.

Availability of Public Transport Facilities

- 2.11 The Subject Site is well-served by various types of public transport services, including road-based franchised bus and public light bus. These services operate along Kwun Tong Road and Wai Yip Street within 500m or about 10 minutes' walk away. The Subject Site is located closest to the Ngau Tau Kok MTR Station and the nearest entrance is at Lai Yip Street, which is some 500 metres or 10 minutes' walk away.
- 2.12 Details of the road-based public transport services operating in the vicinity of the Subject Site are shown in **Figure 2.13** and **Table 2.2**.

TABLE 2.2 FRANCHISED BUS AND GMB SERVICES OPERATING CLOSE TO THE SUBJECT SITE

| Route | Routing | Frequency (minutes) |
|---------|---|---------------------|
| KMB 1A | Sau Mau Ping (Central) – Star Ferry | 5 – 15 |

3.0 THE PROPOSED DEVELOPMENT

Development Parameters

- 3.1 The Proposed Development has a RCHE with: (i) no less than 302, but not more than 557 beds (“RCHE within the Proposed Development”), and (ii) a Hotel with 200 guest rooms (“Hotel within the Proposed Development”).
- 3.2 The internal transport facilities and traffic assessment below assume that the RCHE within the Proposed Development has 557 beds, and the Hotel within the Proposed Development has 200 guest rooms.

Provision of Internal Transport Facilities

(a) RCHE within the Proposed Development

- 3.3 The HKPSG has no recommendation on the provision of internal transport facilities for RCHE, hence, the provision for the RCHE within the Proposed Development, is provided based on the operational needs and also with reference to similar type RCHE in Kwun Tong.
- 3.4 Provision of internal transport facilities for RCHE within the Proposed Development are shown in **Table 3.1**.

TABLE 3.1 PROVISION OF INTERNAL TRANSPORT FACILITIES FOR RCHE WITHIN THE PROPOSED DEVELOPMENT

| Item | Proposed Provision |
|--------------------------|---|
| Car Parking Space | 8 nos. car parking spaces provided based on operational needs: (i) 5 parking spaces @ 5m (L) x 2.5m (W) x 2.4m (H) for senior management staff of RCHE; (ii) 3 parking spaces for RCHE visitors, including - 2 nos. @ 5m (L) x 2.5m (W) x 2.4m (H); and - 1 no accessible car parking space @ 5m (L) x 3.5m (W) x 2.4m (H) |
| Motorcycle Parking Space | 2 nos. motorcycle parking spaces @ 2.4m (L) x 1.0m (W) x 2.4m (H) are provided |
| Loading / Unloading Bay | 1 no. Heavy Goods Vehicles loading / unloading bay @ 11.0m (L) x 3.5m (W) x 4.7m (H) are provided for shared use, i.e., for RCHE and Hotel use |
| Ambulance lay-by | 1 no. ambulance lay-by @ 9.0m (L) x 3.0m (W) x 3.6m (H) shared use by ambulance and mini-coach is provided based on the operational needs. |

- 3.5 **Table 3.1** shows the provision of 8 car parking spaces, 2 motorcycle parking spaces and 1 ambulance lay-by shared use by ambulance and mini-coach. In addition, 1 HGV loading/unloading bay is also provided which is for shared used with the Hotel within the Proposed Development.
- 3.6 Most RCHEs in Hong Kong are located within buildings where there are other uses, and access to the RCHE is shared with other uses. Therefore, it is not possible to distinguish traffic generated by the RCHE from other uses for these type of RCHEs, i.e., those located within in a multi-use building. Nevertheless, several RCHEs located in a single use building were identified for the conduct of traffic surveys, and the surveyed RCHEs have similar characteristic as the Proposed Development, in terms of: (i) location; (ii) scale; (iii) accessibility to Public Transport Services, and (iv) availability of internal transport facilities.

3.7 The utilisation surveys were conducted from 0800 – 1959 hours on a weekday. Details of the surveyed RCHE are given in **Table 3.2**, and the survey results are presented in **Table 3.3**.

TABLE 3.2 DETAILS OF RCHES SURVEYED

| Location of Elderly Home | No. of Beds | Accessibility to Public Transport Services | Car Park |
|---------------------------------|-------------|--|----------|
| (A) 8 Kung Lok Road, Kwun Tong | 266 | Access to public transport services from this RCHE is convenient with numerous bus and GMB routes operate in the vicinity. The nearest MTR Ngau Tau Kok Station is located within 500m from this RCHE. | Yes |
| (B) 88 Kung Lok Road, Kwun Tong | 226 | Access to public transport services from this RCHE is convenient with numerous bus and GMB routes operate in the vicinity. The nearest MTR Ngau Tau Kok Station is located within 500m from this elderly home. | Yes |

TABLE 3.3 SURVEY RESULTS OF THE 2 SURVEYED RCHES

| Time Period (hours) | Maximum Number of Vehicles Observed at any time | | | | |
|---|---|------------------------------------|------------------------------|------------|-----------|
| | Private car and taxi | Light goods vehicle ⁽¹⁾ | Medium / heavy goods vehicle | Mini coach | Ambulance |
| (A) 8 Kung Lok Road, Kwun Tong (266 beds) | | | | | |
| 0800 – 0859 | 1 | 0 | 0 | 0 | 0 |
| 0900 – 0959 | 0 | 1 | 0 | 0 | 0 |

| 1100 – 1159 | 0 | 0 | 0 | 0 | 0 |
| 1200 – 1259 | 0 | 1 | 0 | 0 | 0 |
| 1300 – 1359 | 0 | 1 | 0 | 0 | 0 |
| 1400 – 1459 | 0 | 0 | 0 | 1 | 0 |
| 1500 – 1559 | 0 | 0 | 0 | 0 | 1 |
| 1600 – 1659 | 0 | 0 | 0 | 1 | 0 |
| 1700 – 1759 | 0 | 0 | 0 | 1 | 0 |
| 1800 – 1859 | 1 | 0 | 0 | 0 | 0 |
| 1900 – 1959 | 0 | 0 | 0 | 0 | 0 |
| Maximum (0800 – 1959) | 1 | 1 | 0 | 1 | 1 |
| (B) 88 Kung Lok Road, Kwun Tong (226 beds) | | | | | |
| 0800 – 0859 | 0 | 0 | 0 | 0 | 0 |
| 0900 – 0959 | 0 | 1 | 0 | 0 | 0 |
| 1000 – 1059 | 0 | 0 | 0 | 1 | 0 |
| 1100 – 1159 | 0 | 0 | 0 | 1 | 0 |
| 1200 – 1259 | 0 | 1 | 0 | 0 | 0 |
| 1300 – 1359 | 0 | 0 | 0 | 1 | 0 |
| 1400 – 1459 | 1 | 0 | 0 | 0 | 0 |
| 1500 – 1559 | 1 | 0 | 0 | 0 | 0 |
| 1600 – 1659 | 1 | 0 | 0 | 0 | 0 |
| 1700 – 1759 | 1 | 0 | 0 | 0 | 0 |
| 1800 – 1859 | 0 | 0 | 0 | 0 | 0 |
| 1900 – 1959 | 0 | 0 | 0 | 0 | 0 |
| Maximum (0800 – 1959) | 1 | 1 | 0 | 1 | 0 |

Note: ⁽¹⁾ including goods van, light goods vehicle

3.8 **Table 3.3** shows the number of vehicles observed within the same hour but these vehicles are not present at the same time. For example, at Location (A) 8

Kung Lok Road, Kwun Tong, during the period 0800 – 0859 hours, the Private car and taxi were not observed at the same time as the Light goods vehicle.

3.9 **Table 3.3** also shows the following:

(ai) Private car parking spaces

3.10 The maximum number of private car and taxi observed at both surveyed RCHEs at the same time was 1. Based on this rate, the RCHE within the Proposed Development is estimated to generate a maximum of 3 vehicles at the same time only. [Calculation: 1 vehicle / 226 beds x 557 beds = 2.46, say, 3]

3.11 Taxis stop momentarily to pick-up and drop-off. Therefore, taxis can use the private car parking spaces PC-09 or PC-10 on G/F as shown in **Figure 3.1**.

3.12 Hence, the provision of 8 car parking spaces is more than sufficient to serve the RCHE within the Proposed Development.

(aii) Goods Vehicle Loading / Unloading Bay

3.13 As shown in **Table 3.3**, no more than 1 goods vehicle was observed at any one time. Hence, the provision of 1 HGV loading/unloading bay for shared use by RCHE and Hotel is sufficient to serve the RCHE within the Proposed Development.

(aiii) Layby for shared use by ambulance and mini-coach

3.14 As shown in **Table 3.3**, no ambulance and mini-coach arrived at the same time. Hence, 1 ambulance layby which is for shared use with mini-coach is sufficient to serve the RCHE within the Proposed Development.

(b) Hotel within the Proposed Development

3.15 The internal transport facilities for Hotel within the Proposed Development are provided in accordance to the recommendations of the HKPSG, and are presented in **Table 3.4**.

TABLE 3.4 COMPARISON OF THE HKPSG RECOMMENDATIONS AND PROPOSED INTERNAL TRANSPORT FACILITIES FOR HOTEL WITHIN THE PROPOSED DEVELOPMENT

| HKPSG Recommendation for a Hotel with 200 guest rooms | Proposed Provision |
|---|--|
| Car Parking Space | |
| 1 car parking space per 100 rooms. 200/100 = 2 nos. | 2 nos. @ 5m (L) x 2.5m (W) x 2.4m (H) = HKPSG recommendation |
| Motorcycle Parking Space | |
| 5 to 10% of the total provision for private cars Minimum = 2 x 5% = 0.1, say 1 no. Maximum = 2 x 10% = 0.2, say 1 no. | 1 no. @ 2.4m (L) x 1m (W) x 2.4m (H) = HKPSG recommendation |
| Taxi and Private Car Layby | |
| Minimum 2 lay-by for taxi and private cars for ≤ 299 rooms = 2 nos. | 2 nos. @ 5m (L) x 2.5m (W) x 2.4m (H) = HKPSG recommendation |
| Single-Deck Tour Bus Layby | |

| HKPSG Recommendation for a Hotel with 200 guest rooms | Proposed Provision |
|--|--|
| Minimum 1 lay-by for single-deck tour buses for ≤ 299 rooms = 1 no. | 1 no. @ 12m (L) x 3.5m (W) x 3.8m (H) = HKPSG recommendation |
| Goods Vehicle Loading / Unloading Bay | |
| 0.5 - 1 goods vehicle bay per 100 rooms Minimum = 200 / 100 x 0.5 = 1 no. Maximum = 200 / 100 x 1 = 2 nos. | 1 no. @ 7m (L) x 3.5m (W) x 3.6m (H) for Light Goods Vehicles = HKPSG recommendation |

3.16 For ease of reference, the internal transport facilities for the Proposed Development presented in **Tables 3.1** and **3.4**, are summarised in **Table 3.5**.

TABLE 3.5 SUMMARY OF INTERNAL TRANSPORT FACILITIES PROVIDED FOR THE PROPOSED DEVELOPMENT

| Item | Use | Proposed Provision |
|---|------------------------------|--------------------|
| Car Parking Space | RCHE | 8 |
| | Hotel | 2 |
| | Total | 10 |
| Ambulance Parking Space | RCHE | 1 |
| Motorcycle Parking Space | Hotel | 1 |
| | RCHE | 2 |
| | Total | 3 |
| Taxi and Private Car Layby | Hotel | 2 |
| Single-Deck Tour Bus Layby | Hotel | 1 |
| LGV Goods Vehicle Loading / Unloading Bay | Hotel | 1 |
| HGV Goods Vehicle Loading / Unloading Bay | Shared use by RCHE and Hotel | 1 |
| | Total | 2 |

Reasons for Deviation from the HKPSG Maximum Recommendation for Hotel within the Proposed Development

(a) Site Constraint

3.17 The only internal transport facility for the Hotel within the Proposed Development, which deviates from the HKPSG maximum recommendation is the provision of 1 goods vehicles loading / unloading bay, instead of 2. However, a second goods vehicle loading / unloading bay is provided, which is for shared use with the RCHE within the Proposed Development.

3.18 The provision of an additional goods vehicle loading / unloading bay on the ground floor was considered, but not found to be possible due site constraint, and is explained as follows:

- (1) The Outline Development Plan no. D/K14A/1H require setback along Wai Yip Street of 2.3m, and (ii) 1.5m setback and 1.5m non-building area along the service lane and;
- (2) With the above setback requirements, the length of the subject site (i.e. measured from Wai Yip Street to the service lane) which is only 21.3m is further reduced to only 17.5m (reduction of length of 17.8%, which is substantial).

3.19 After accommodating the essential facilities such as, structural columns, staircases, escalators, lift lobby and vehicle ramp to the basement car park, etc, the provision of another goods vehicle loading / unloading bay is not possible. The Authorised Person has used his utmost effort to ensure the layout is arranged and utilised in good order.

(b) Limited Goods Vehicles Generated

3.20 Goods vehicles generated are mostly related to room cleaning services, and the deliveries of toiletry and beverages. The expected goods vehicle trip generated for the Hotel within the Proposed Development is summarised in **Table 3.6**.

TABLE 3.6 GOODS VEHICLE TRIP GENERATION FOR HOTEL WITHIN THE PROPOSED DEVELOPMENT

| Item | Activity | Expected goods vehicles generated |
|------------------------------------|---|-----------------------------------|
| Room cleaning service | Replenish cleaning material | 4 trips per month |
| Toiletry | Restock toiletries, eg, shampoo, lotion, etc. | 1 trip per month |
| Beverages | Deliver distilled water | 8 trips per month |
| Total goods vehicle trips = | | 13 trips per month |

3.21 **Table 3.6** shows that the Hotel within the Proposed Development is expected to generate 13 goods vehicle trips per month, or 1 vehicle trip every 2.3 days, which is low. Hence, the provision of 1 LGV goods vehicle loading/unloading bay and 1 HGV loading/unloading bay which is for shared use by RCHE and Hotel, is sufficient to serve the loading / unloading activities of the Hotel.

Layout Plans

3.22 The carpark layout plans for G/F and B1/F are found in **Figures 3.1 – 3.2**. Similar to the Approved S16 Planning Application (TPB ref: A/K14/809), two vehicular access points are provided for the Proposed Development, and these are located at:

- (i) The service lane at the northern side of the Proposed Development
- (ii) Wai Yip Street

Swept Path Analysis

3.23 The CAD-based swept path analysis program, Autodesk Vehicle Tracking, was used to check the ease of vehicle manoeuvring, and the swept path drawings of vehicle manoeuvring on the parking levels are found in in **Appendix 2**. Vehicles are found to have no manoeuvring problems and all vehicles could enter and leave the spaces with ease.

Traffic Management Plan

3.24 Loading / unloading related to goods deliveries will be undertaken during the non-peak hours. The Management Office will ensure good maintenance of the turntable and should there the turntable fail to operate, the Management Office will immediately contact the turntable maintenance company to repair.

3.25 If necessary, the Management Office will stagger the delivery of goods so that only 1 goods vehicle will be present at the same time.

4.0 TRAFFIC IMPACT

Design Year

- 4.1 The Proposed Development is expected to be completed by 2029, and the design year adopted for the capacity analysis is 2032, i.e. 3 years after the completion of the development.

Traffic Forecast

- 4.2 The 2032 traffic flows used for the junction analysis are produced with reference to the (i) 2031 traffic flows from the Base District Traffic Model (“BDTM”); (ii) estimated traffic growth from 2031 to 2032; (iii) the planned developments in the vicinity of the Proposed Development, and (iv) additional traffic generated by the Proposed Development.

Estimated Traffic Growth Rate from 2031 to 2032

- 4.3 Reference is made to the 2019 – based Territorial Population and Employment Data Matrix (“TPEDM”) data produced by Planning Department for Kwun Tong District, which are for 2019, 2026 and 2031 and are presented in **Table 4.1**.

TABLE 4.1 2019-BASED TPEDM DATA PRODUCED BY PLANNING DEPARTMENT FOR KWUN TONG DISTRICT

| Item | TPEDM Estimation / Projection | | |
|------------------------|--|---------------------------|-----------|
| | 2019 | 2026 | 2031 |
| Population | 693,900 | 769,400 | 741,300 |
| Employment | 395,350 | 410,550 | 408,250 |
| Total | 1,089,250 | 1,179,950 | 1,149,550 |
| Average Growth% | From 2019 to 2026: +1.15% From 2019 to 2031: +0.45% | From 2026 to 2031: -0.52% | N/A |

- 4.4 **Table 4.1** shows that the highest average annual growth rate is 1.15%. In view that there is no estimation beyond 2031 and to err on the high side, the growth rate of 1.15% per annum is adopted for the traffic growth between 2031 and 2032.

Planned Developments in the Vicinity of the Proposed Development

- 4.5 The planned developments included in the 2032 reference traffic flows are presented in **Table 4.2**, and the locations of planned developments are shown in **Figure 4.1**.

TABLE 4.2 PLANNED DEVELOPMENTS IN THE VICINITY OF THE PROPOSED DEVELOPMENT

| Site | Planning Application No. / Plan No. | Address | Use | Development Parameters (Approx.) |
|------|-------------------------------------|--------------------|------------|----------------------------------|
| 1 | A/K14/763 | 350 Kwun Tong Road | Commercial | GFA = 25,658m ² |
| 2 | A/K14/766 | 41 King Yip Street | Commercial | GFA = 30,576m ² |
| 3 | A/K14/771 | 32 Hung To Road | Commercial | GFA = 13,122m ² |
| 4 | A/K14/773 | 82 Hung To Road | Industrial | GFA = 13,378m ² |
| 5 | A/K14/774 | 7 Lai Yip Street | Commercial | GFA = 14,775m ² |
| 6 | A/K14/775 | 132 Wai Yip Street | Commercial | GFA = 6,021m ² |
| 7 | A/K14/777 | 71 How Ming Street | Office | GFA = 18,312m ² |
| 8 | A/K14/778 | 203 Wai Yip Street | Industrial | GFA = 13,479m ² |

| Site | Planning Application No. / Plan No. | Address | Use | Development Parameters (Approx.) |
|------|--|---|------------|----------------------------------|
| 9 | A/K14/782 | 4 Tai Yip Street | Retail | GFA = 8,027m ² |
| 10 | A/K14/787 | 33 Hung To Road | Industrial | GFA = 13,830m ² |
| 11 | A/K14/796 | 28A Hung To Road | Hotel | No. of rooms = 89 |
| 12 | A/K14/804 | 334 -336 and 338 Kwun Tong Road | Commercial | GFA = 23,211m ² |
| 13 | A/K14/806 | 11 Lai Yip Street | Office | GFA = 15,051m ² |
| 14 | A/K14/807 | Kun Tong Inland Lots 1 S.A , 1 RP, 3 and 15 | Commercial | GFA = 66,890m ² |
| 15 | A/K14/808 | 201 Wai Yip Street | Commercial | GFA = 13,478m ² |
| 16 | A/K14/809 | 1 Tai Yip Street and 111 Wai Yip Street | Commercial | GFA = 13,349m ² |
| 17 | A/K14/810 | 5 Lai Yip Street | Commercial | GFA = 14,788m ² |
| 18 | A/K14/820 | 73 – 75 Hung To Road | Commercial | GFA = 26,757m ² |
| 19 | A/K14/822 | 25 Tai Yip Street, Kwun Tong | Commercial | GFA = 5,572m ² |
| 20 | S/K14S/URA1/3 Urban Renewal Authority's (URA) latest 'Vertical City' scheme of a mixed use development | Areas 4 and 5 of Kwun Tong Town Centre | Commercial | GFA = 268,300m ² |
| 21 | N/A | EKEO Lai Yip Street Development | Commercial | GFA = 23,000m ² |
| 22 | N/A | Kwun Tong Action Area | Commercial | GFA = 89,350m ² |
| 23 | N/A | Kowloon Bay Action Area | Commercial | GFA = 500,000m ² |

4.6 The infrastructure and road network included in the BDTM are as follows:

- Kai Tak Development
- Tseung Kwan O – Lam Tin Tunnel
- Central Kowloon Route
- Trunk Road T2 between Central Kowloon Route and Tseung Kwan O – Lam Tin Tunnel

Traffic Generated by the Proposed Development

4.7 In view that the TPDM does not provide trip generation rates for RCHE, reference is made to the traffic generation of similar elderly homes, and the surveyed RCHE are found in **Table 3.2**.

4.8 As for Hotel, reference is also made to surveyed hotels which are of similar class, number of hotel rooms and traffic characteristics, i.e. proximity to the MTR and road-based public transport services. The surveyed hotels are:

- 254-room Nina Hotel Kowloon East at 38 Chong Yip St, Kwun Tong
- 298-room Tuen Mun Pentahotel at 6 Tsun Wen Road, Tuen Mun

4.9 The surveyed hotel trip generation rates are found to be lower than the lower limit of rates for Hotel found in the TPDM. Hence, to be conservative, the lower limit of trip generation rates taken from TPDM is adopted to estimate the traffic generation associated to the Hotel within the Proposed Development. The adopted trip generation rates and the calculated traffic generation associated with the Proposed Development are presented in **Table 4.3**.

TABLE 4.3 TRAFFIC GENERATION OF THE PROPOSED DEVELOPMENT

| Item | AM Peak Hour | | | PM Peak Hour | | |
|--|--------------|--------|-------|--------------|--------|-------|
| | In | Out | 2-way | In | Out | 2-way |
| Trip Generation Rates for RCHE (pcu/hour/bed) | | | | | | |
| RCHE | 0.0155 | 0.0155 | NA | 0.0133 | 0.0133 | NA |
| Trip Generation Rates for hotel (pcu/hour/guest room) | | | | | | |
| Hotel ⁽¹⁾ | 0.0832 | 0.0843 | NA | 0.0908 | 0.0883 | NA |
| Traffic Generation of Proposed Development (pcu/hour) | | | | | | |
| RCHE: 557 beds [a] | 9 | 9 | 18 | 8 | 8 | 16 |
| Hotel: 200 guest rooms [b] | 17 | 17 | 34 | 19 | 18 | 37 |
| Total [a] + [b] | 26 | 26 | 52 | 27 | 26 | 53 |

Note: ⁽¹⁾ lower limit of rates taken from TPDM

- 4.10 **Table 4.3** shows the Proposed Development generates **52** and **53** more pcu (2-way) during the AM and PM peak hours respectively.

Comparison of Traffic Generation between the Approved S16 Scheme (TPB ref: A/K14/780) and the Proposed Development

- 4.11 The traffic generated by the Approved S16 Scheme (TPB ref: A/K14/780) is compared with the Proposed Development and is presented in **Table 4.4**.

TABLE 4.4 COMPARISON OF TRAFFIC GENERATION BETWEEN THE APPROVED S16 SCHEME (TPB REF: A/K14/780) AND THE PROPOSED DEVELOPMENT

| Scheme | Traffic Generation (pcu/hour) | | | | | |
|--|-------------------------------|-----------|------------|--------------|-----------|-----------|
| | AM Peak Hour | | | PM Peak Hour | | |
| | In | Out | 2-way | In | Out | 2-way |
| Approved S16 Scheme (TPB ref: A/K14/780) [A] | 42 | 30 | 72 | 21 | 28 | 49 |
| Proposed Development [B] | 26 | 26 | 52 | 27 | 26 | 53 |
| Difference [B] – [A] | -16 | -4 | -20 | +6 | -2 | +4 |

- 4.12 **Table 4.4** shows that compared with the Approved S16 Scheme (TPB ref: A/K14/780), the Proposed Development generates **20** pcu (2-way) less and **4** pcu **more** during the AM and PM peak hours respectively. It can be concluded from traffic generation aspect **the Proposed Development is a better-off scheme** compared to the Approved S16 Scheme (TPB ref: A/K14/780).

Planned Junction Improvement Schemes

- 4.13 The planned junction improvement schemes found in the vicinity of the Subject Site are summarized in **Table 4.5** and shown in **Appendix 3**.

TABLE 4.5 PLANNED TRAFFIC IMPROVEMENT SCHEMES IN THE VICINITY OF THE PROPOSED DEVELOPMENT

| Junction | | Description of Work | Project Proponent | Estimated Completion Year |
|----------|---------------------------------|--|---|---------------------------|
| J1 | Hoi Bun Road / Shun Yip Street | The road markings are changed at Shun Yip Street Westbound and Eastbound | Kowloon Bay Action Area – Feasibility Study | Before 2032 |
| J7 | Wai Yip Street / Lai Yip Street | The road alignment is adjusted at Lai Yip Street Northbound | Kowloon Bay Action Area – Feasibility Study | |

| Junction | | Description of Work | Project Proponent | Estimated Completion Year |
|----------|---------------------------------|--|--|---------------------------|
| J8 | Kwun Tong Road / Lai Yip Street | The road alignment is adjusted at Lai Yip Street Northbound | Kwun Tong Action Area – Feasibility Study | |
| J9 | Hoi Bun Road / Lai Yip Street | A new pedestrian crossing across Hoi Bun Road Eastbound is added and existing staggered pedestrian crossing at Lai Yip Street to be converted to straight crossing | Technical study on the Lai Yip Street site in Kowloon East | |

2032 Traffic Flows

4.14 Year 2032 traffic flows for the following cases are derived:

2032 without the Proposed Development [A] = *2031 traffic flows derived with reference to BDTM + estimated total growth from 2031 to 2032+ Traffic generated by the planned developments in the vicinity of the Proposed Development*

2032 with the Proposed Development [B] = *[A] + traffic generated by the Proposed Development (Table 4.3)*

4.15 The 2032 peak hour traffic flows for the cases without and with the Proposed Development, are shown in **Figures 4.2 - 4.3**, respectively. The ingress/egress vehicular routings to/from the Proposed Development via Wai Yip Street and the service lane at the northern side of the Proposed Development are shown in **Figures 4.4 - 4.5**.

2032 Junction Operational Performance

4.16 Year 2032 capacity analysis for the cases without and with the Proposed Development are summarized in **Table 4.6** and detailed calculations are found in the **Appendix 1**.

TABLE 4.6 2032 JUNCTION OPERATIONAL PERFORMANCE

| Ref. | Junction | Type of Junction / Parameter ⁽¹⁾ | Without the Proposed Development | | With the Proposed Development | |
|------|--|---|----------------------------------|---------|-------------------------------|---------|
| | | | AM Peak | PM Peak | AM Peak | PM Peak |
| J1 | Hoi Bun Road / Shun Yip Street ⁽³⁾ | Signal / RC | 22% | 17% | 22% | 17% |
| J2 | Wai Yip Street / Shun Yip Street | Signal / RC | 21% | 19% | 20% | 18% |
| J3 | Tai Yip Street / Service Lane | Priority / RFC | 0.044 | 0.036 | 0.057 | 0.048 |
| J4 | Hong Tak Road / Tai Yip Street | Priority / RFC | 0.384 | 0.294 | 0.414 | 0.329 |
| J5 | Tai Yip Street / Tai Yip Lane | Priority / RFC | 0.135 | 0.117 | 0.136 | 0.117 |
| J6 | Kwun Tong Road / Hong Tak Road | Priority / RFC | 0.655 | 0.743 | 0.678 | 0.771 |
| J7 | Wai Yip Street / Lai Yip Street ⁽³⁾ | Signal / RC | 26% | 35% | 26% | 35% |
| J8 | Kwun Tong Road / Lai Yip Street ⁽³⁾ | Signal / RC | 23% | 18% | 23% | 18% |
| J9 | Hoi Bun Road / Lai Yip Street ⁽³⁾ | Signal / RC | 21% | 23% | 21% | 23% |
| J10 | Lai Yip Street / Hung To Road ⁽²⁾ | Signal / RC | 33% | 41% | 33% | 41% |

Notes: ⁽¹⁾ RC – reserve capacity RFC – Ratio of Flow to Capacity

⁽²⁾ Kerbside on-street activities are reflected in the junction performance

⁽³⁾ Junction Improvement Scheme has been incorporated in the assessment

4.17 **Table 4.6** shows that the junctions operate with capacities during the AM and PM peak hours for the cases without and with the Proposed Development.

5.0 PEDESTRIAN ASSESSMENT

Surveyed Pedestrian Locations

- 5.1 In order to quantify the existing pedestrian flows, pedestrian counts were conducted at the footpaths and waiting area of the pedestrian crossing shown in **Figure 5.1** during the AM and PM peak periods. The survey locations are summarized in **Table 5.1**.

TABLE 5.1 SURVEYED PEDESTRIAN LOCATIONS

| Ref. | Location |
|--|---|
| <i>Footpath</i> | |
| 1 | Northern footpath of Wai Yip Street between Shun Yip Lane and Tai Yip Street (Eastern side) |
| 2 | Northern footpath of Wai Yip Street between Shun Yip Lane and Tai Yip Street (Western side) |
| 3 | Shun Yip Lane between Wai Yip Street and Service Lane |
| <i>Waiting area of pedestrian crossing</i> | |
| W1 | Western pedestrian crossing of Wai Yip Street / Shun Yip Street |
| W2 | Eastern pedestrian crossing of Wai Yip Street / Shun Yip Street |

Existing Pedestrian Flows

- 5.2 The existing peak 15-minute 2-way pedestrian flows are also presented in **Figure 5.1**.

Estimated growth from 2024 to 2032

- 5.3 The 2032 reference pedestrian flows are estimated with the reference of the existing pedestrian flows and a growth rate of 1.15% per annum, which is derived from the latest TPEDM data.

Pedestrian Generated by the Proposed Development

- 5.4 The pedestrian generations associated with the RCHE and Hotel within the Proposed Development, are estimated based on in-house pedestrian rates. The in-house pedestrian rates are presented in **Table 5.2**, and the estimated pedestrian generation of Proposed Development is found in **Table 5.3**.

TABLE 5.2 IN-HOUSE PEDESTRIAN GENERATION RATES

| Use | Pedestrian Generation Rates (pedestrian / 15 min / 100m ²) | | | |
|----------------------|--|-------|---------|-------|
| | AM Peak | | PM Peak | |
| | In | Out | In | Out |
| RCHE ⁽¹⁾ | 0.049 | 0.004 | 0.011 | 0.034 |
| Hotel ⁽²⁾ | 0.053 | 0.173 | 0.156 | 0.177 |

⁽¹⁾ 266-bed RCHE known as Buddhist Sum Ma Shui Ying Care & Attention Home for the Elderly at 8 Kung Lok Road, Kwun Tong

⁽²⁾ 254-room Nina Hotel Kowloon East at 38 Chong Yip St, Kwun Tong

TABLE 5.3 PEDESTRIAN GENERATED BY THE PROPOSED DEVELOPMENT

| Use | GFA (m ²) | Pedestrian Generation (pedestrian / 15 min) | | | |
|--------------|-----------------------|---|-----------|-----------|-----------|
| | | AM Peak | | PM Peak | |
| | | In | Out | In | Out |
| RCHE | 557 beds | 28 | 3 | 7 | 19 |
| Hotel | 200 rooms | 11 | 35 | 32 | 36 |
| Total | | 39 | 38 | 39 | 55 |

Year 2032 Pedestrian Flows

5.5 The 2032 pedestrian flow with and without the Proposed Development are derived using the following method:

Without the Proposed Development [a] = 2024 observed pedestrian flows + growth from 2024 to 2032 + pedestrian generated by the planned developments in the vicinity of the Subject Site

With the Proposed Development [b] = *[a]* + pedestrian generated by the Proposed Development (**Table 5.3**)

5.6 The 2032 pedestrian flows without and with the Proposed Development are presented in **Figures 5.2 and 5.3**.

Level-Of-Service (“LOS”) Assessment

5.7 The pedestrian assessment method adopted is referenced to Exhibit 18-3 of Chapter 18 of the Highway Capacity Manual (“HCM”) 2000 and the extract of Exhibit 18-3 is summarised in **Table 5.4**.

TABLE 5.4 EXTRACT OF EXHIBIT 18-3 OF THE HCM 2000

| LOS | Space (m ² /p) | Flow Rate (p/min/m) |
|-----|---------------------------|---------------------|
| A | > 5.6 | ≤ 16 |
| B | > 3.7-5.6 | > 16-23 |
| C | > 2.2-3.7 | > 23-33 |
| D | > 1.4-2.2 | > 33-49 |
| E | > 0.75-1.4 | > 49-75 |
| F | ≤ 0.75 | variable |

(a) LOS of the Footpaths

5.8 The effective width of the surveyed footpaths and the year 2032 LOS without and with the Proposed Development are presented in **Tables 5.5 and 5.6**.

TABLE 5.5 EFFECTIVE WIDTH OF SURVEYED FOOTPATHS

| Ref | Footpath width (m) | Effective width (m) ⁽¹⁾ |
|-----|--------------------|------------------------------------|
| 1 | 3.5 | 2.5 |
| 2 | 2.7 | 1.7 |
| 3 | 9.8 | 8.8 |

Note:⁽¹⁾ The effective width does not include 0.5m dead zone on both sides, i.e. 1m

TABLE 5.6 YEAR 2032 LOS OF FOOTPATH WITHOUT AND WITH THE PROPOSED DEVELOPMENT

| Ref. | Peak Period | Year 2032 without the Proposed Development | | | Year 2032 with the Proposed Development | | |
|------|-------------|--|---------------------------------|-----|---|----------------------------------|-----|
| | | Flow (Ped/15 min) | Rate ⁽¹⁾ (Ped/min/m) | LOS | Flow (Ped/15 min) | Rate ⁽¹⁾ (Ped/ min/m) | LOS |
| 1 | AM | 350 | 9.3 | A | 369 | 9.8 | A |
| | PM | 317 | 8.5 | A | 340 | 9.1 | A |
| 2 | AM | 467 | 18.3 | B | 516 | 20.2 | B |
| | PM | 336 | 13.2 | A | 395 | 15.5 | A |
| 3 | AM | 969 | 7.3 | A | 1008 | 7.6 | A |
| | PM | 593 | 4.5 | A | 640 | 4.8 | A |

Note: ⁽¹⁾ pedestrian flow rate = pedestrian flow ÷ 15 minutes ÷ effective width

5.9 **Table 5.6** shows that the footpaths achieve LOS A and B during AM and PM peak for the 2032 cases without and with the Proposed Development.

(b) Waiting area of the Pedestrian Crossing

5.10 The year 2032 LOS of pedestrian crossing waiting areas without and with the Proposed Development are presented in **Table 5.7**.

TABLE 5.7 YEAR 2032 LOS OF PEDESTRIAN CROSSING WAITING AREAS WITHOUT AND WITH THE PROPOSED DEVELOPMENT

| Ref | Area (m ²) | Average No. of Pedestrians at the waiting area (ped/signal cycle) | | Pedestrian Space (m ² /ped) | | LOS | |
|----------------------------------|------------------------|---|----|--|------|-----|----|
| | | AM | PM | AM | PM | AM | PM |
| Without the Proposed Development | | | | | | | |
| W1 | 150 | 47 | 11 | 3.2 | 13.6 | C | A |
| W2 | 63 | 24 | 4 | 2.6 | 15.8 | C | A |
| With the Proposed Development | | | | | | | |
| W1 | 150 | 48 | 12 | 3.1 | 12.5 | C | A |
| W2 | 63 | 25 | 5 | 2.5 | 12.6 | C | A |

5.11 **Table 5.7** shows that the pedestrian crossing waiting areas achieve LOS A and C during AM and PM peak for the 2032 cases without and with the Proposed Development.

5.12 It is noted that *"In general, LOS C is desirable for most design at streets with dominant 'living' pedestrian activities"*. Since the LOS in **Tables 5.6 and 5.7** are A to C, it can be concluded that the Proposed Development will have no adverse impact to the footpaths and pedestrian crossing waiting areas in the vicinity.

6.0 SENSITIVITY TEST

Permitted Maximum Number of Beds for RCHE

- 6.1 Although the proposed maximum number of beds for RCHE is 557, based on the RCHE GFA and the minimum area of floor space per resident as per Code of Practice for Residential Care Homes (Elderly Persons) issued by Social Welfare Department, a total of 644 beds could be provided. Hence, a sensitivity test is undertaken for the RCHE with 644 beds and the Hotel with 200 rooms.
- 6.2 As stated in paragraphs 3.17 - 3.18, due to site constraints, the Authorised Person has used his utmost effort to ensure the layout is arranged and utilised in good order. Internal transport facilities will remain unchanged as the Proposed Development .

Sensitivity Test on Traffic Impact

(a) Comparison of Traffic Generation

- 6.3 The comparison of traffic generated by the Proposed Development, and the sensitivity test with 644-bed RCHE and 200-room Hotel, is presented in **Table 6.1**.

TABLE 6.1 COMPARISON OF TRAFFIC GENERATION

| Item | AM Peak Hour | | | PM Peak Hour | | |
|--|--------------|-----|-------|--------------|-----|-------|
| | In | Out | 2-way | In | Out | 2-way |
| Proposed Development | | | | | | |
| RCHE: 557 beds | 9 | 9 | 18 | 8 | 8 | 16 |
| Hotel: 200 guest rooms | 17 | 17 | 34 | 19 | 18 | 37 |
| Total [A] | 26 | 26 | 52 | 27 | 26 | 53 |
| Sensitivity Test | | | | | | |
| RCHE: 644 beds | 10 | 10 | 20 | 9 | 9 | 18 |
| Hotel: 200 guest rooms | 17 | 17 | 34 | 19 | 18 | 37 |
| Total [B] | 27 | 27 | 54 | 28 | 27 | 55 |
| Difference in Traffic Generation (pcu/hour) | | | | | | |
| [B] – [A] | +1 | +1 | +2 | +1 | +1 | +2 |

- 6.4 **Table 6.1** shows that compared with the Proposed Development, the sensitivity test with 644-bed RCHE and 200-room Hotel, generates 2 pcu / hour (2-way) more in both AM and PM peak hours, which is negligible.

(b) 2032 Traffic Flows

- 6.5 The sensitivity test with 644-bed RCHE and 200-room Hotel 2032 peak hour traffic flows are shown in **Figure 6.1**. The ingress/egress vehicular routings to/from the Proposed Development via Wai Yip Street and the service lane at the northern side of the Proposed Development are shown in **Figures 6.2 - 6.3**.

(c) 2032 Junction Operational Performance

- 6.6 The comparison of junction capacity analysis for Proposed Development, and the sensitivity test with 644-bed RCHE and 200-room Hotel, is found in **Table 6.2** and detailed calculations of the sensitivity test are found in the **Appendix 1**.

TABLE 6.2 COMPARISON OF 2032 JUNCTION OPERATIONAL PERFORMANCE

| Ref. | Junction | Type of Junction / Parameter ⁽¹⁾ | Proposed Development [A] | | Sensitivity Test [B] | | Difference [B] – [A] | |
|------|--|---|--------------------------|---------|----------------------|---------|----------------------|---------|
| | | | AM Peak | PM Peak | AM Peak | PM Peak | AM Peak | PM Peak |
| J1 | Hoi Bun Road / Shun Yip Street ⁽³⁾ | Signal / RC | 22% | 17% | 22% | 17% | 0% | 0% |
| J2 | Wai Yip Street / Shun Yip Street | Signal / RC | 20% | 18% | 20% | 18% | 0% | 0% |
| J3 | Tai Yip Street / Service Lane | Priority / RFC | 0.057 | 0.048 | 0.057 | 0.048 | 0.000 | 0.000 |
| J4 | Hong Tak Road / Tai Yip Street | Priority / RFC | 0.414 | 0.329 | 0.416 | 0.329 | 0.002 | 0.000 |
| J5 | Tai Yip Street / Tai Yip Lane | Priority / RFC | 0.136 | 0.117 | 0.136 | 0.117 | 0.000 | 0.000 |
| J6 | Kwun Tong Road / Hong Tak Road | Priority / RFC | 0.678 | 0.771 | 0.680 | 0.771 | 0.002 | 0.000 |
| J7 | Wai Yip Street / Lai Yip Street ⁽³⁾ | Signal / RC | 26% | 35% | 26% | 35% | 0% | 0% |
| J8 | Kwun Tong Road / Lai Yip Street ⁽³⁾ | Signal / RC | 23% | 18% | 23% | 18% | 0% | 0% |
| J9 | Hoi Bun Road / Lai Yip Street ⁽³⁾ | Signal / RC | 21% | 23% | 21% | 23% | 0% | 0% |
| J10 | Lai Yip Street / Hung To Road ⁽²⁾ | Signal / RC | 33% | 41% | 33% | 41% | 0% | 0% |

Notes: ⁽¹⁾ RC – reserve capacity RFC – Ratio of Flow to Capacity
⁽²⁾ Kerbside on-street activities are reflected in the junction performance
⁽³⁾ Junction Improvement Scheme has been incorporated in the assessment

6.7 **Table 6.2** shows there is negligible difference in the junction capacity between the 2 schemes. Hence, the impact of the sensitivity test with a 644-bed RCHE and a 200-room Hotel, is negligible.

Sensitivity Test on Pedestrian Impact

(a) Comparison of Pedestrian Generation

6.8 The comparison of pedestrian generated by the Proposed Development, and the sensitivity test with 644-bed RCHE and 200-room Hotel, is presented in **Table 6.3**.

TABLE 6.3 COMPARISON OF PEDESTRIAN GENERATION

| Item | AM Peak Hour | | | PM Peak Hour | | |
|---|--------------|-----------|-----------|--------------|-----------|-----------|
| | In | Out | 2-way | In | Out | 2-way |
| Proposed Development | | | | | | |
| RCHE: 557 beds | 28 | 3 | 31 | 7 | 19 | 26 |
| Hotel: 200 guest rooms | 11 | 35 | 46 | 32 | 36 | 68 |
| Total [A] | 39 | 38 | 77 | 39 | 55 | 94 |
| Sensitivity Test | | | | | | |
| RCHE: 644 beds | 32 | 3 | 35 | 8 | 22 | 30 |
| Hotel: 200 guest rooms | 11 | 35 | 46 | 32 | 36 | 68 |
| Total [B] | 43 | 38 | 81 | 40 | 58 | 98 |
| Difference in Pedestrian Generation (pcu/hour) | | | | | | |
| [B] – [A] | +4 | +0 | +4 | +1 | +3 | +4 |

6.9 **Table 6.3** shows the pedestrians generated by the sensitivity test, is 4 more (2-way) in the AM and PM peak hours, compared to the Proposed Development, which is negligible.

(b) 2032 Pedestrian Flows

6.10 The sensitivity test 2032 pedestrian flows is presented in **Figure 6.4**.

(c) LOS of the Footpaths

6.11 The sensitivity test year 2032 LOS is presented in **Table 6.4**.

TABLE 6.4 SENSITIVITY TEST FOR YEAR 2032 LOS OF FOOTPATH

| Ref. | Peak Period | Year 2032 Sensitivity Test | | |
|------|-------------|----------------------------|-------------------------------------|-----|
| | | Flow (Ped/15 min) | Rate ⁽¹⁾ (Ped/ min/m) | LOS |
| 1 | AM | 370 | 9.9 | A |
| | PM | 341 | 9.1 | A |
| 2 | AM | 518 | 20.3 | B |
| | PM | 398 | 15.6 | A |
| 3 | AM | 1010 | 7.7 | A |
| | PM | 642 | 4.9 | A |

Note: ⁽¹⁾ pedestrian flow rate = pedestrian flow ÷ 15 minutes ÷ effective width

6.12 **Table 6.4** shows that the footpaths still achieve LOS A and B during AM and PM peak.

(d) Waiting Area of the Pedestrian Crossing

6.13 Sensitivity test for the year 2032 pedestrian crossing waiting areas is presented in **Table 6.5**.

TABLE 6.5 SENSITIVITY TEST FOR YEAR 2032 PEDESTRIAN CROSSING WAITING AREAS

| Ref | Area (m ²) | Average No. of Pedestrians at the waiting area (ped/signal cycle) | | Pedestrian Space (m ² /ped) | | LOS | |
|-----|---------------------------|--|----|--|------|-----|----|
| | | AM | PM | AM | PM | AM | PM |
| W1 | 150 | 48 | 12 | 3.1 | 12.5 | C | A |
| W2 | 63 | 25 | 5 | 2.5 | 12.6 | C | A |

6.14 **Table 6.5** shows that the pedestrian crossing waiting areas still achieve LOS A and C during AM and PM peak for the sensitivity test.

6.15 Since the LOS in **Tables 6.4 and 6.5** are A to C, it can be concluded that the sensitivity test found no adverse impact to the footpaths and pedestrian crossing waiting areas in the vicinity.

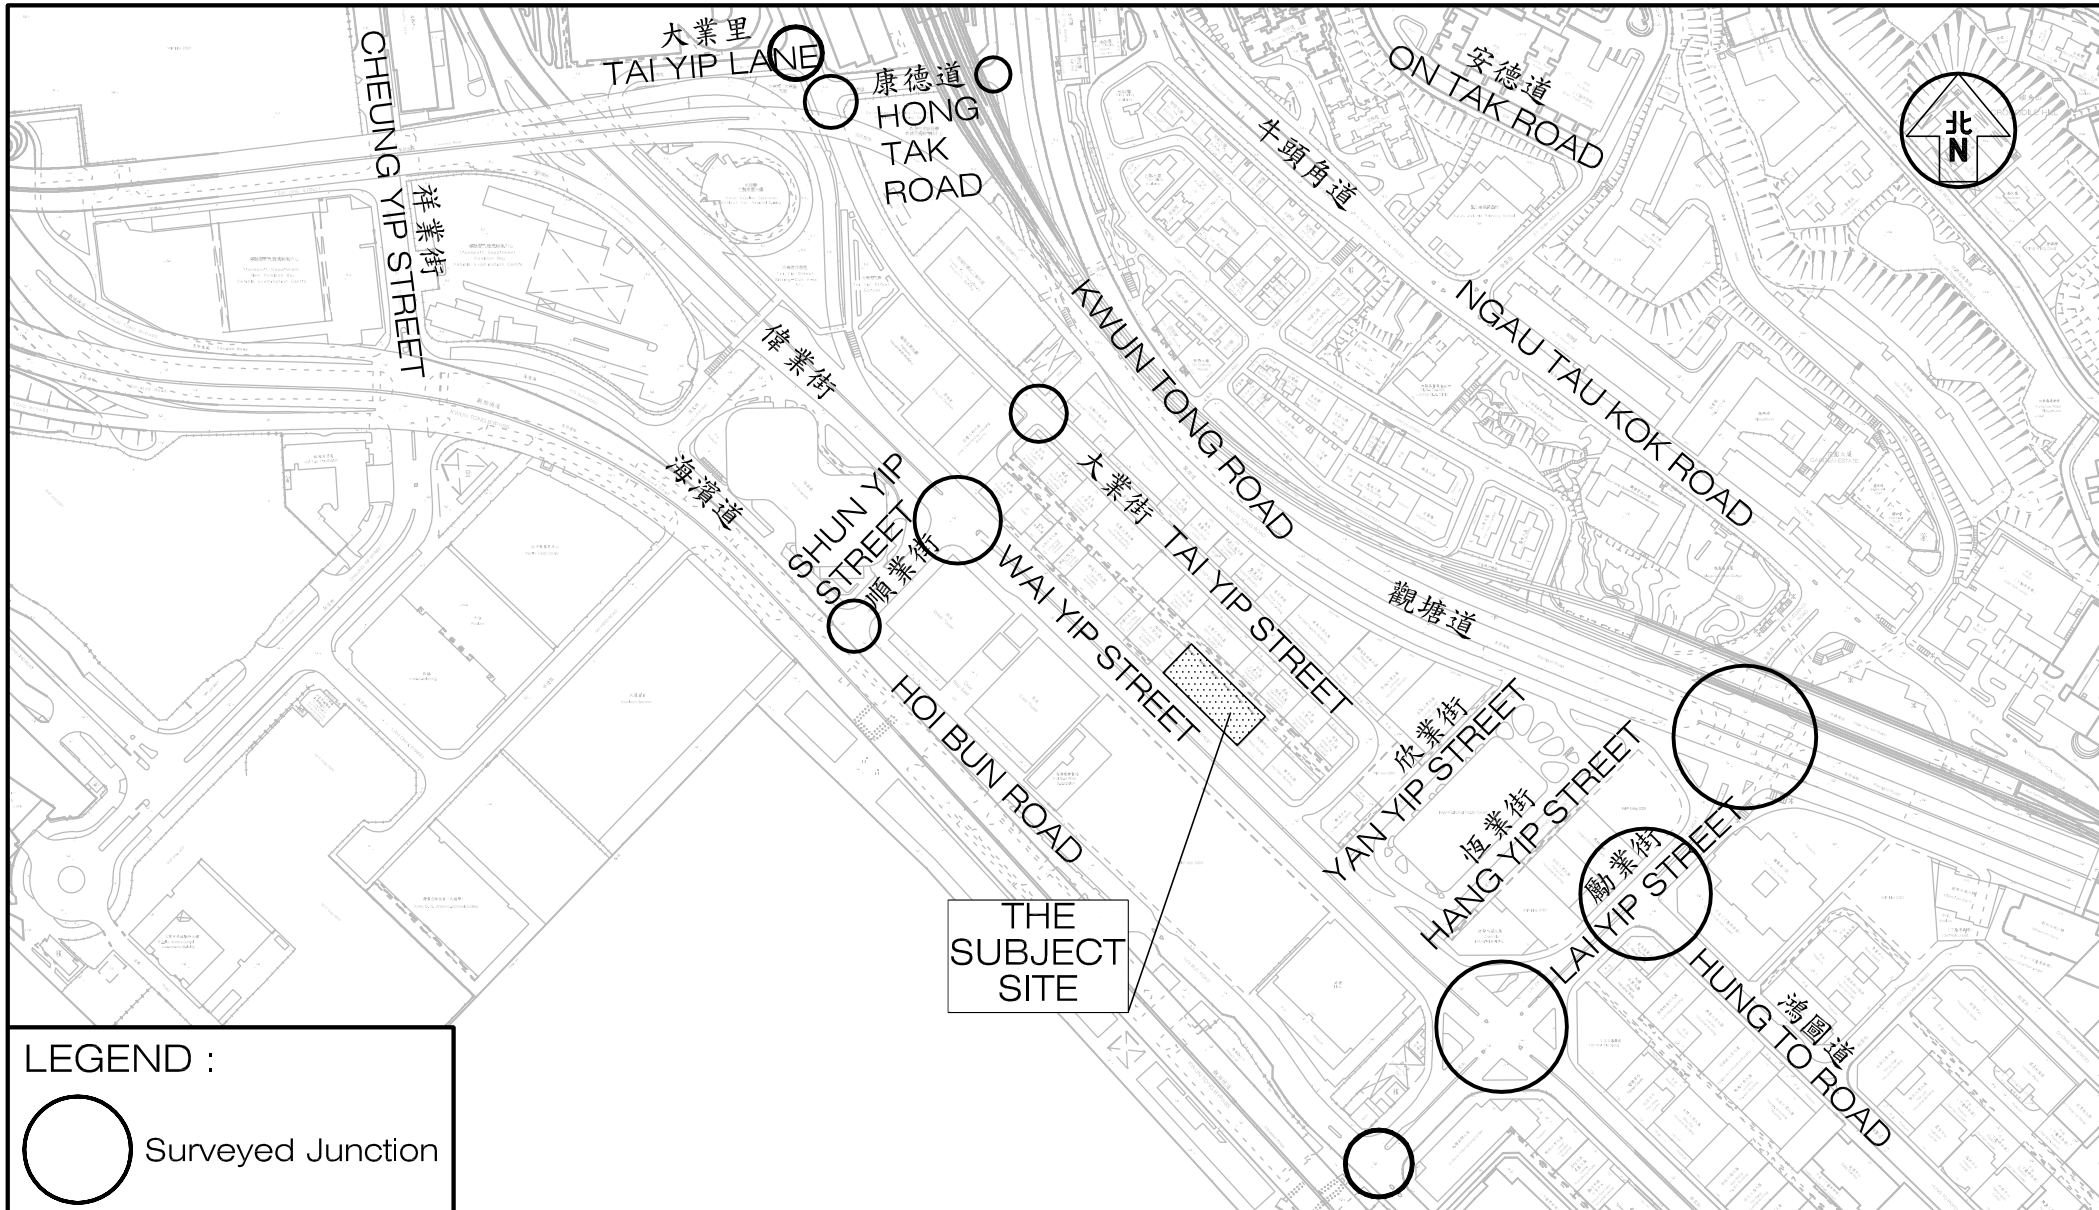

7.0 CONCLUSION

- 7.1 The Subject Site is located at Nos. 107 - 109 Wai Yip Street in Kwun Tong. On 29th May 2020, the TPB approved the S16 Planning Application (TPB ref: A/K14/780) for Office, Shop and Services & Eating Place Uses at the Subject Site.
- 7.2 Subsequent to the Approved S16 Scheme (TPB ref: A/K14/780), the Applicant has the intention to rezone the Subject Site and construct a building which comprises of a RCHE with (i) no less than 302, but not more than 557 beds, and (ii) hotel with 200 rooms.
- 7.3 Manual classified counts were conducted at the junctions located in the vicinity of the Subject Site in order to establish the peak hour traffic flows. Currently, the surveyed junctions operate with capacities during the AM and PM peak hours.
- 7.4 Similar to the Approved S16 Scheme (TPB ref: A/K14/780), two vehicular access points are provided for the Proposed Development, including, (i) the service lane at the northern side of the Proposed Development, and (ii) Wai Yip Street. Compared to the Approved S16 Scheme (TPB ref: A/K14/780), the Proposed Development is expected to generate less traffic during the AM and PM peak hours.
- 7.5 The internal transport facilities provided for RCHE within the Proposed Development are based on the operational needs and also with reference to similar type RCHE in Kwun Tong. Those for the Hotel within the Proposed Development are provided with reference to the recommendation of the HKPSG. Swept path analysis was conducted to ensure that all vehicles could enter and leave the development and the spaces provided with ease.
- 7.6 The Proposed Development is expected to be completed by 2029, and the junction capacity analysis is undertaken for year 2032. For the design year 2032, the junctions analysed are expected to operate with capacities during the peak hours for the case without and with Proposed Development.
- 7.7 The pedestrian assessment conducted found that the surveyed footpaths and waiting area of the pedestrian crossing would operate with LOS A to C in 2032 for the cases without and with the Proposed Development. Hence, it is concluded that the Proposed Development has **no** adverse impact to the footpaths and pedestrian crossing in the vicinity.
- 7.8 A sensitivity test for the scheme with 644-bed RCHE and 200-room Hotel is undertaken and found to have no adverse traffic and pedestrian impact.
- 7.9 It is concluded that the Proposed Development will result in **no** adverse traffic impact to the surrounding road network.

at Nos. 107 – 109 Wai Yip Street, Kwun Tong**

(Planning Application No. Y/K14S/4)

Appendix VI

Replacement Pages of Visual Impact Assessment

5. IDENTIFICATION OF VISUAL SENSITIVE RECEIVERS AND SELECTION OF VIEWPOINTS

5.1 Identifying Visual Envelope and Visual Sensitive Receivers

5.1.1 As an urban site, the Visual Envelope ("VE") or the zone of visual influence of the Proposed Development on its surroundings is determined by the buildings in the vicinity of the Site. As prescribed in the Town Planning Board Guidelines No. 41, the viewer will tend to see the building as part of a group rather than as a single building when the viewing distance equals to three times the height of the building (the 3H zone) from the Site. Therefore, the 3H zone could be used as a reference in determining the assessment area. Since the actual BH of the Proposed Development will be about 111 m, the assessment area covers a radial area of about 333 m (i.e. 3H) from the facade of the proposed development.

5.1.2 The local VE is presented in **Figure 5.1**. The visual context of the Site is currently confined by existing development on three sides except the open view to/from Kwun Tong Typhoon Shelter in the south-western direction. Since protecting private view is not the duty of the TPB, this VIA focuses primarily on public VSR only and no private VSR, such as residents of private development and users of developments with restricted/exclusive accesses (e.g. school and office, etc.) will be identified.

5.2 Selection of Visual Sensitive Viewpoints

5.2.1 Representative VPs within the VE were selected for assessing the visual impact to the VSRs. Selected VPs shall cover public views from easily accessible and popular area from different directions. When selecting VPs, priority shall be given to major public open space and public focal points which are considered as major public visual sensitive viewpoints. In this VIA, 4 local VPs are selected within the VE and 3 distant VPs are selected based on their strategic importance to the vicinity or to the territory. The selected local VPs and distant VPs are briefly introduced below, illustrated in **Figures 5.1 & 5.2** and briefly summarised in **Table 5.1**:

VP1 – Hoi Bun Road Park, Wai Yip Street (about 85m to the southeast of the Site)

5.2.2 Hoi Bun Road Park is a focal point for the north-western part of KTBA. There will be lawn, sitting area, and a soccer pitch in the park to serve the neighbourhood and KTBA. This VP is taken at the entrance of Hoi Bun Road Park to the soccer pitch. This VP is selected to represent the views of the VSRs in the park.

6.5 VP4 – MTR Ngau Tau Kok Station, Junction of Elegance Road and Kwun Tong Road (Figure 6.4 refers)

Visual Composition

6.5.1 This VP is taken at the entrance of MTR Ngau Tau Kok Station, before the stairs which brings people down to the subway and into KTBA. The semi-open elevated platform of Ngau Tau Kok Station comes into sight and those newly redeveloped commercial developments (namely Manulife Place and the former Maxwell Industrial Building (about +125.9mPD under Application No. A/K14/763), and a redeveloped building which is under construction, namely the former Darton Tower (about +125.9mPD under Planning Application No. A/K14/782)) erected above the platform in the background. Two planned developments for office, shop and services and eating place (+115mPD and +119.5mPD) are situated in close proximity. Since majority of the sites within the street block bound by Yan Yip Street, Kwun Tong Road and Tai Yip Street are yet to be redeveloped, the existing medium-rise buildings leave a "open" skyline to the west of Manulife Place thus harbourfront developments (i.e. One Bay East) can also be seen from this VP.

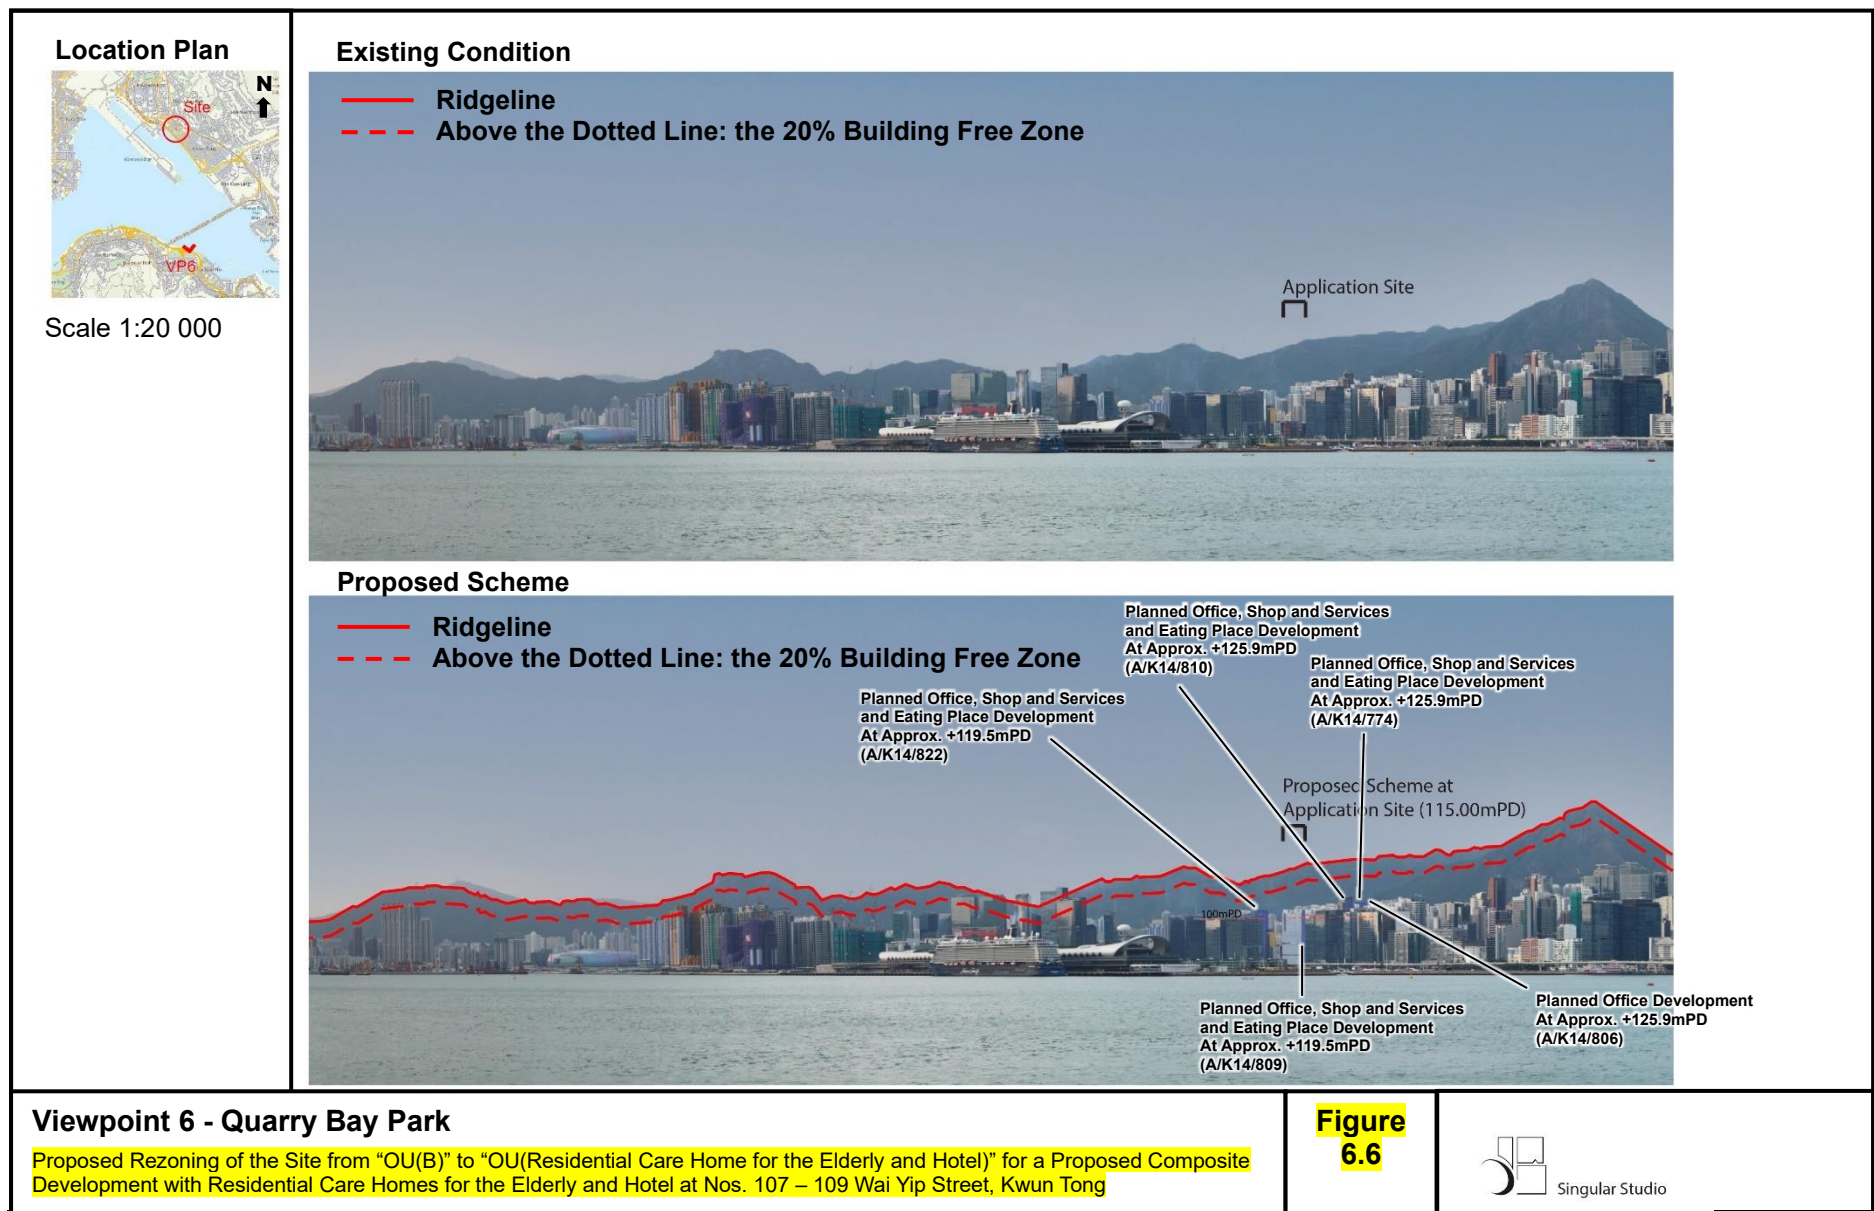

6.5.2 The Site is located along the said "open" skyline. Yet, the photomontage in **Figure 6.4** shows that the Proposed Development will blend in well together with other new commercial buildings visible from this VP in the current condition. It is expected that the Proposed Development will be partly hidden by new developments on Kwun Tong Road, which would have a similar height as Manulife Place, in the future.

Visual Obstruction

6.5.3 The Proposed Development will block the view towards East Tower of One Bay East, yet this is not a prominent visual resource that requires preservation. There would be slightly change of the sky view due to the increase of BH as compared to the BHR, the Proposed Development alleviates the difference in scale between the new commercial buildings (the site of former Maxwell Industrial Building and Manulife Place) and the planned developments and creates a gradual stepping effect. The visual obstruction is slight.

Effect on Public Viewers

6.5.4 VSRs represented by this VP would be less sensitive to visual change as they don't tend to stop and appraise the townscape while they walk down the stairs to get into KTBA for work. As discussed above, the Proposed Development would induce changes to the view, but the visual change would be slight.

7. CONCLUSION

7.1.1 Based on the analysis on the appraisal of visual impact on Visual Composition, Visual Obstruction, Effect on Public Views and Effect on Visual Resources, **Table 7.1** below presents the overall visual impact caused by the Proposed Development to the VSRs represented by each VP.

Table 7.1 Summary of Assessment of Visual Impact at the Selected Viewpoints

| Viewpoint | Location | Visual Impact of the Proposed Building |
|--------------------|--|--|
| Local Viewpoints | | |
| VP1 | Hoi Bun Road Park, Wai Yip Street | Slightly adverse impact |
| VP2 | Hoi Bun Road Park, Hoi Bun Road | Negligible |
| VP3 | Footbridge across Wai Yip Street, Hung Yip Street | Slightly adverse |
| VP4 | MTR Ngau Tau Kok Station, Junction of Elegance Road and Kwun Tong Road | Slightly adverse |
| VP7 | Kung Lok Road Children's Playground | Slightly adverse |
| Distant Viewpoints | | |
| VP5 | Kai Tak Runway Park | Slightly adverse |
| VP6 | Quarry Bay Park | Negligible |

7.1.2 In view of the above, this VIA therefore concludes that resultant overall visual impact of the Proposed Development to the VSRs represented by the selected VPs would be negligible to slightly adverse. The multi-level greenings on 3/F and R/F would echo with the greenery within Hoi Bun Road Park. The Proposed Development would induce noticeable change to the skyline inevitably since it is the first batch of redevelopment amongst the neighbouring medium-rise buildings, however it would appear more comparable upon redevelopment of the nearby medium-rise buildings and the visual effect of the Proposed Development would be a lot less influential.

7.1.3 Whilst the Proposed Development will create visual change for VSRs at VP1, VP3, VP4, VP5 and VP7, the Proposed Development will be compatible to the surrounding development context. The replacement of the existing industrial building by the proposed modern industrial building with carefully thought-out

façade treatment and multi-level greenings would help to enhance the visual experience and add visual interest of VSRs at these VPs.

7.1.4 Majority of the sites within the street block bound by Yan Yip Street, Kwun Tong Road and Tai Yip Street are yet to be redeveloped. The existing medium-rise buildings therefore leave a relatively low roof-line to the west of Manulife Place. Visual impact of the Proposed Development would be negligible when viewing from VP7 and largely blocked when viewing from VP4 upon redevelopment of these sites.

7.1.5 When viewing from VP5 – Kai Tak Runway Park and VP6 – Quarry Bay Park, the overall skyline is not affected generally due to other higher existing and/or planned buildings acting as the townscape backdrop. Moreover, the 20% Building Free Zone would not be affected when viewing from the strategic viewing point at VP6. Thus, the visual impact for VP5 and VP6 are slightly adverse and negligible respectively.

7.1.6 The proposed design has catered for the sensitivity of visual experience to the neighborhood and will continually improve the overall aesthetics and visual interests of the Proposed Development in upcoming architectural design development stages. Efforts have been made to ameliorate the potential visual impact of the Proposed Development as far as possible. The proposed RCHE and Hotel uses target to offer quality services, especially in social welfare aspect, for the persons in need.
