# 1. INTRODUCTION

## 1.1 Project Background

1.1.1 The Applicant proposed to develop a medium density residential development at D.D.130, Lam Tei in Tuen Mun (the "Application Site").

1.1.2 In order to confirm the environmental feasibility of the Proposed Development, Ramboll Hong Kong Limited is commissioned by the project proponent to prepare an Environmental Assessment to address the noise impact and air quality impact for the Proposed Development.

1.1.3 The EA includes the following major environmental issues:

1) Railway noise impact;
2) Fixed noise impact;
3) Traffic Noise Impact from the adjacent road network;
4) Air quality impact arising from traffic emissions from the adjacent road networks and industrial emission impact.

## 1.2 Project Location

1.2.1 With a development area of 8,896m$^2$ and zoned as Residential (Group B) 1" (R(B)1) zone, the Application Site is proposed to develop a medium density residential development. The Application Site is bounded by Castle Peak Road – Lam Tei Section and the Tuen Ma Line and Light Rail tracks to the east and Ng Lau Road and a nullah to the west. To the north of the Application Site is an existing residential development – Lingrade Garden. Village houses and some car repairing workshops are situated to the west of the Application Site separated by Ng Lau Road and a nullah.

1.2.2 The location of the Application Site is presented in **Figure 1.1**.

## 1.3 Proposed Development

1.3.1 The Proposed Development consists of 5 residential towers ranging from 14 storeys to 27 storeys. Single aspect design of the apartments along the eastern site boundary is adopted to prevent noise impact from the Light Rail and Tuen Ma Line. A clubhouse is situated below Tower 1 and Tower 3. The number of storeys and building height information of the residential towers are as follow:

- Tower 1: 27 storeys (+107.8 mPD)
- Tower 2: 27 storeys (+107.8 mPD)
- Tower 3: 16 storeys (+66.8 mPD)
- Tower 4: 14 storeys (+59.8 mPD)
- Tower 5: 24 storeys (+94.8 mPD)

1.3.2 The total numbers of units are 1,385 units. Detailed plans of the Proposed Development are presented in **Appendix 1.1**.

# 2. RAILWAY NOISE IMPACT ASSESSMENTS

## 2.1 Introduction

2.1.1 The Proposed Development is situated in the vicinity of Tuen Ma Line (TML) and Light Rail Transit (LRT). Due to the short distance to TML and LRT, potential railway noise impact is expected at the Proposed Development. This section evaluates the potential railway noise impact on the Proposed Development.

## 2.2 Legislation and Guidelines

2.2.1 The Application Site is located at the area that comprises residential development and industrial uses. Furthermore, a high-rise public housing development is planned at San Hing Tsuen in the vicinity of the Application Site. Therefore, the area is not considered rural area, low density residential area, isolated high-rise area or urban area. Hence, the classification of "Area other than those above" is considered applicable. Furthermore, Castle Peak Road – Lam Tei with its annual average daily traffic flow (A.A.D.T.) of 34,500 (Traffic Census 2022 referred) is located within 100m from the Application Site. As such, the Application Site is directly affected by the Influencing Factor (Castle Peak Road – Lam Tei). Therefore, the Area Sensitivity Rating (ASR) of the noise sensitive receivers (NSRs) facing Castle Peak Road – Lam Tei should be assigned as "C" rating, while those facing away from Castle Peak Road – Lam Tei within the Application Site are considered not affected by the Influencing Factor and should be assigned as "B" rating.

2.2.2 **Table 2.1** shows the noise criteria stipulated in the Technical Memorandum for the Assessment of Noise from Places other than Domestic Premises, Public Places or Construction Sites (IND-TM) for railway noise impact assessment at the NSRs.

**Table 2.1 Noise Criteria for Railway Noise Impact Assessment**

| Criteria | Acceptable Noise Level (ANL) | |
|---|---|---|
| | **ASR B (for NSRs facing away from Castle Peak Road)** | **ASR C (for NSRs facing Castle Peak Road)** |
| $L_{eq\ (30\ minutes)}$ (0700 to 2300) | 65 dB(A) | 70 dB(A) |
| $L_{eq\ (30\ minutes)}$ (2300 to 0700) | 55 dB(A) | 60 dB(A) |

2.2.3 Table 4.1 of the Chapter 9 HKPSG provides additional criteria for assessing railway noise. These noise criteria are specified in terms of A-weighted maximum noise level and daily railway noise exposure level, as shown in below **Table 2.2**:

**Table 2.2 HKPSG Recommended Railway Noise Standard**

| Parameter | Standard Noise Level dB(A) |
|---|---|
| $L_{max}$ (2300 to 0700) | 85 |
| $L_{eq\ (24\ hour)}$ | 65 |

## 2.3 Identification of Railway Noise Sources

2.3.1 Train induced airborne noise at viaduct of TML near Siu Hong TML Station and at grade section of LRT near Lam Tei LRT Station are considered as the key sources of rail noise impact.

2.3.2 The identified three types of noise associated with the TML train operation include:

- Rolling noise associated with the interaction between train wheel and rail;
- Noise from air conditioning units on top of each train car; and
- Structural re-radiated noise emitted from viaduct structure during train passing (associated with the Tuen Ma Line Viaduct Structure with Multi Plenum System).

2.3.3 The section of LRT is at grade near Lam Tei LRT Station while a section of LRT near Siu Hong Station is on viaduct. The identified types of noise associated with the LRT train is rolling noise and structural re-radiated noise. Contribution from air conditioning noise is considered insignificant compared with the rolling noise.

2.3.4 On-site noise measurements have been conducted in May 2023 for rolling noise of LRT. The structural re-radiated noise from the viaduct structure of TML and LRT are referenced from the approved EIA report "Development at San Hing Road and Hong Po Road, Tuen Mun" (AEIAR-227/2020). The noise measurement locations are presented in **Figure 2.1**.

## 2.4 Assessment Methodology

2.4.1 The assessment is carried out with reference to the "Calculation of Railway Noise 1995" (CRN) issued by the Department of Transport, UK. The railway was divided into number of segments to address changes in rail traffic flow, speed, gradient of the track, turnout, or due to progress variation in screening along the railway lines. The propagation of rail noise to the noise sensitive receivers (NSRs) has been corrected by distance, ground and air absorption, screening effect by barriers, reflection, angle of view at the reception point, train speed and number of trains etc.

2.4.2 The cumulative potential railway noise impacts from TML and LRT are assessed.

2.4.3 The procedures of calculation and assumptions are listed in **Table 2.3** while the source term information which is based on on-site measurement, approved EIA report, previous report from MTRC and updated information provided by MTRC (as shown in **Appendix 2.1**) is listed in **Table 2.4**.

**Table 2.3 Procedures of Rail Noise Assessment**

| Procedure | Assumption/Remarks | Reference |
|---|---|---|
| 1. Identify the extent of the site area to be affected by the air-borne noise from the rail operation; locate the assessment points at the representative NSRs | The first layer of planned NSRs located near TML and LRT will be selected for rail noise prediction and evaluation | - |
| 2. Identify the noise sources of rail operation | TML:<br>• The rolling noise is emitted through the gap between the train and the walkway on the viaduct of TML. The multi-plenum system installed at the viaduct section of TML absorbs some of the noise from train wheel-rail interaction. The effect of the system had been included in the source measurement in the report published in 2015 by MTRC<br>• Noise from air conditioning units located on the roof of each car and source level is referenced from the report published in 2015 by MTRC<br>• Structural re-radiated noise generated from the vibration of the viaduct during train passing by is referenced from the approved EIA report "Development at San Hing Road and Hong Po Road, Tuen Mun" (AEIAR-227/2020)<br>LRT:<br>• Rolling noise are based on on-site measurement in May 2023<br>• Structure re-radiated noise data are based on approved EIA report "Development at San Hing Road and Hong Po Road, Tuen Mun" (AEIAR-227/2020) | (1) |
| 3. Identify the train type and the source term of the train | Refer to **Table 2.4** | - |
| 4. Calculate the SEL from $L_{max}$ at reference condition | SEL = $L_{max}$ + 10log(L/V) +10.5 – 10log[(4D/(4D2+1)) + 2tan-1(1/(2D))]<br>where D = d/L, d = perpendicular distance from the track (m), L = train length (m) and V = train speed (km per hour) | Equation 15.21 in E |

| Procedure | Assumption/Remarks | Reference |
|---|---|---|
| 5. Correction of train frequency for 30 mins | +10 $\log_{10}$(N) in dB(A)<br>where N = No. of trains per 30 minutes per direction | (2) |
| 6. Correction of train frequency for 24 hours | +10 $\log_{10}$(N) in dB(A)<br>where N = No. of trains per 24 hours per direction | - |
| 7. Correction of number cars | + 10 $\log_{10}(N/N_{ref})$ in dB(A)<br>where N = No. of cars in the measured events, $N_{ref}$ = No. of cars in the reference | - |
| 8. Incorporate Track Wear Correction | +3 dB(A) | (2) |
| 9. Incorporate Joint/Turnout Correction (to represent the augmentation in noise due to thermal expansion joints) | With conservative assumption, +7.0 dB(A) for a representative 20 m segment | (3) |
| 10. Evaluate the distance between the NSR and the track and make distance correction | -10 log10($d'/d_{ref}$) in dB(A)<br>where d' = Slant distance from track to NSR and $d_{ref}$ = Reference distance | (2) |
| 11. Evaluate the angle of view and calculate angle of view correction | +10 $\log_{10}(\pi\theta/180 - \cos2\alpha \sin\theta) - 5$ in dB(A)<br>where θ = Angle of view and α = Acute angle between a line drawn through the NSR, parallel to the track, and the line bisecting the angle of view, θ | (2) |
| 12. Incorporate Barrier Correction | Shadow Zone:<br>• -21 dB(A) for $\delta$ > 2.5 m<br>where δ is the path difference in meter<br>• -7.75 log10(5.2 + 203 δ) dB(A) for 0≤ δ <2.5 m<br>Illuminated Zone:<br>• 0 dB(A) for $\delta$ > 0.4 m<br>• 0.88 + 2.14 log10(10-3 + δ) dB(A) for 0 ≤ δ <0.4 m | Chart 6(a) in (2) |
| 13. Calculate the overall noise level from all rail segments including rolling noise, noise from air conditioning units and structural re-radiated noise ($L_{eq\ 30min}$) | • $L_{eq\ 30min\ overall}$ at NSR= $L_{eq\ 30min\ rolling}$ + $L_{eq\ 30min\ A/C}$ + $L_{eq\ 30min\ structure}$<br>• $L_{eq\ 30min\ rolling}$ at NSR = SEL + $C_{speed}$ + $C_{freq}$ + $C_{track}$ + $C_{joint}$ + $C_{distance}$ + $C_{angle}$ + $C_{Barrier}$<br>• $L_{eq\ 30min\ structure}$ at NSR = SEL + $C_{freq}$ + $C_{distance}$ + $C_{angle}$ + $C_{Barrier}$ | - |

| Procedure | Assumption/Remarks | Reference |
|---|---|---|
| 14. Incorporate Façade Correction | +2.5 dB(A) | (2) |
| 15. Calculate the $L_{max}$ (2300 – 0700) | • $L_{max}$ at NSR= $L_{max\ rolling}$ + $L_{max\ A/C}$ + $L_{max\ structure}$<br>• $L_{eq\ max\ rolling}$ at NSR = SEL + $C_{speed}$ + $C_{freq}$ + $C_{track}$ + $C_{joint}$ + $C_{distance}$ + $C_{angle}$ + $C_{Barrier}$<br>• $L_{max\ structure}$ at NSR = SEL + $C_{freq}$ + $C_{distance}$ + $C_{angle}$ + $C_{Barrier}$ | - |
| 16. Calculate the overall noise level from all rail segments including rolling noise, noise from air conditioning units and structural re-radiated noise ($L_{eq\ 24hr}$) | • $L_{eq\ 24hour}$ at NSR= $L_{eq\ 24hour\ rolling}$ + $L_{eq\ 24hour\ A/C}$ + $L_{eq\ 24hour\ structure}$<br>• $L_{eq\ 24hour\ rolling}$ at NSR = SEL + $C_{speed}$ + $C_{freq}$ + $C_{track}$ + $C_{joint}$ + $C_{distance}$ + $C_{angle}$ + $C_{Barrier}$<br>• $L_{eq\ 24hour\ structure}$ at NSR = SEL + $C_{freq}$ + $C_{distance}$ + $C_{angle}$ + $C_{Barrier}$ | - |

#: Updated information provided by MTRC (**Appendix 2.1**)

##: Based on on-site noise measurements conducted for this EA Study.

2.4.4 The frequency of trains during daytime and night-time are different. Therefore, railway noise due to TML have been assessed for both periods according to their respective train frequency.

2.4.5 The maximum frequency of LRT during daytime and night-time are the same.

## 2.5 Noise Sensitive Receivers

2.5.1 The locations of the representative NSRs are selected to represent the worst affected location. The NSRs are taken at 1m away from the façade opening for ventilation purpose and at 1.2m above the floor slab of the habitable rooms. **Figure 2.2** shows the locations of the representative NSRs.

## 2.6 Predicted Railway Noise Impact

2.6.1 The layout of the Proposed Development has already adopted special building design for the housing block located closest to the TML and LRT track to minimise the angle of view to the rail track. The predicted noise levels from TML and LRT at the representative NSRs are presented in **Table 2.5**, with details provided in **Appendix 2.1**. Exceedance of rail noise impact are predicted at T1_RN01, T1_RN02, T2_RN02, T2_RN03 and T2_RN04. Mitigation measures would be required.

**Table 2.5 Predicted Rail Noise Impact at Representative NSRs (Unmitigated)**

| NSR | Unit of Criteria | Daytime/Evening Period (0700-2300) | | Night-time Period (2300-0700) | | Other | |
|---|---|---|---|---|---|---|---|
| | | Criteria | Impact | Criteria | Impact | Criteria | Impact |
| T1_RN01 | $L_{eq\ 30\ min}$ dB(A) | 65 | 54-58 | 55 | 55-**57** | - | - |

| | $L_{max}$ dB(A) | - | - | - | - | 85 | 81-83 |
| T2_RN04 | $L_{eq\ 30\ min}$ dB(A) | 65 | 56-58 | 55 | **56-58** | - | - |
| | $L_{eq\ 24\ hrs}$ dB(A) | - | - | - | - | 65 | 53-55 |
| | $L_{max}$ dB(A) | - | - | - | - | 85 | 81-82 |
| T5_RN01 | $L_{eq\ 30\ min}$ dB(A) | 65 | 43-49 | 55 | 44-50 | - | - |
| | $L_{eq\ 24\ hrs}$ dB(A) | - | - | - | - | 65 | 41-47 |
| | $L_{max}$ dB(A) | - | - | - | - | 85 | 80-82 |

Note:

Bolded values denote exceedance of the relevant noise criteria.

## 2.7 Mitigation of Railway Noise Impact

2.7.1 The provision of acoustic window/balcony is proposed at Tower 1 and Tower 2 to protect the NSRs from adverse rail noise impact. As the exceedance is up to 3 dB(A) and acoustic windows (baffle type) are able to reduce a noise level of 13 dB(A) when being assessed at indoor for buildings of similar façade orientation, with the provision of acoustic windows, the adverse rail noise impact at T1_RN01, T1_RN02, T2_RN02, T2_RN03 and T2_RN04 can be mitigated.

2.7.2 The proposed location for acoustic window/balcony provision is shown in **Figure 2.3**. With the provision of acoustic windows/balconies, compliance of rail noise criteria is predicted at all representative NSRs.

2.7.3 With the special building design layout adopted for Proposed Development and the proposed mitigation measures to minimise the view angle to the TML and LRT tracks, compliance of railway noise criteria is predicted at all representative NSRs, no residual railway noise impact is anticipated.

## 2.8 Conclusion

2.8.1 Based on the worst-case prediction scenario of TML and LRT, the potential railway noise impact on the Proposed Development have been evaluated. The results confirmed that the predicted noise levels at the nearest NSR would be able to meet the noise criteria with the recommended mitigation measures in place.

# 3. FIXED NOISE IMPACT ASSESSMENT

## 3.1 Introduction

3.1.1 There are some existing industrial operations nearby the Application Site. The assessment is to evaluate the potential fixed noise impact on the Proposed Development.

## 3.2 Assessment Criteria

3.2.1 Noise assessment has been conducted in accordance with the Technical Memorandum for the Assessment of Noise from Places Other Than Domestic Premises, Public Places or Construction Sites (IND-TM), published under the Noise Control Ordinance (NCO).

3.2.2 The Application Site is located in an area with residential development and industrial uses. Furthermore, a high-rise public housing development is planned at San Hing Tsuen in the vicinity of the Application Site. Therefore, the area is not considered rural area, low density residential area, isolated high-rise area or urban area. Hence, the classification of "Area other than those above" is considered applicable. Furthermore, Castle Peak Road – Lam Tei with its annual average daily traffic flow (A.A.D.T.) of 34,500 (Traffic Census 2022) is located within 100m from the Application Site. As such, the Application Site is directly affected by the Influencing Factor (Castle Peak Road – Lam Tei). Therefore, the Area Sensitivity Rating (ASR) of the NSRs facing Castle Peak Road – Lam Tei should be assigned as "C" rating, while those facing away from Castle Peak Road – Lam Tei, those NSRs are considered not affected by the Influencing Factor should be assigned as "B" rating. **Table 3.1** shows the noise criteria for fixed noise impact assessment at the NSRs.

**Table 3.1 Noise Criteria for Fixed Noise Impact Assessment**

| Criteria | Acceptable Noise Level (ANL) | |
|---|---|---|
| | **ASR B (for NSRs facing away from Castle Peak Road)** | **ASR C (for NSRs facing Castle Peak Road)** |
| $L_{eq\ (30\ minutes)}$ (0700 to 2300) | 65 dB(A) | 70 dB(A) |
| $L_{eq\ (30\ minutes)}$ (2300 to 0700) | 55 dB(A) | 60 dB(A) |

## 3.3 Fixed Noise Sources

3.3.1 Based on the site surveys conducted in May 2023, a total of 8 neighbouring fixed noise sources including car repairing workshops, logistic companies and ice manufacturing factory were identified. As observed during night-time site visits and advised by the site operator, there is no night-time operation for the identified noise sources. The closing hours of the identified workshops and storages are around 1700 to 2000. The locations of the identified noise sources are presented in **Figure 3.1**.

3.3.2 The details of the fixed noise sources are tabulated in **Table 3.2** below.

**Table 3.2 Identified Fixed Noise Sources during Site Visits**

| ID | Name and Photo | Description |
|---|---|---|
| S1 & S1a | 天龍/偉光 (Tin Lung and Wai Kwong)<br> | S1 & S1a is a car repairing workshop. As advised by the operator during site survey, its operation is from 0900 to 1800. There is no night-time operation.<br><br>S1 is the location where car repairing is conducted. Car repairing noise includes tyre pumping and car cleansing. Not all the activities were carried at the time of the site visit. Thus, the SPL of some of the activities were reference from similar operation in previously approved planning application.<br><br>Noise from tyre pumping has made reference to an approved planning application A/YL-KTN/501[(a)]. The measured SPL was 75.1dB(A) at 2m from noise source and hence the SWL is 89.1 dB(A).<br><br>With reference to the approved planning application Y/TM-LTYY/9, noise from car cleansing was measured onsite with SPL of 59.3 dB(A) at 5m from the noise source and hence the SWL is 81.3 dB(A). |
| S2 | 御浚 (Royal's Motor Engineering Company Limited)<br> | S2 is a car repairing workshop. As advised by the operator during site survey, its operation is from 0900 to 1800. There is no night-time operation.<br><br>Car repairing noise includes pneumatic screwdriver, hammering and tyre pumping are considered.<br><br>During the site visits, no noisy activity was observed. As a conservative approach, noise from the car repairing activities has made reference to an approved planning application A/YL-KTN/501[(a)]. Therefore, the overall SWL adopted at S3 is 98.3 dB(A). |
| S3 | CHEP | S5 is a covered storage for pallet. As advised by the operator during site survey, its operation is from 0900 to 1800. There is no night-time operation.<br><br>The noisy industrial activity is loading / unloading of pallet using forklift. With reference to the approved planning |

| ID | Name and Photo | Description |
|---|---|---|
| | | application Y/TM-LTYY/9, the onsite measured SPL was 66.0 dB(A) at 8m and hence the SWL is 92.1 dB(A). |
| S4 | 捷興汽車(Jit Hing)<br> | S6 is a covered car repairing workshop. As advised by the operator during site survey, its operation is from 0900 to 2000. There is no night-time operation.<br><br>This car repairing workshop will be resumed for public housing development at San Hing Road under CEDD's contract B764CL before population intake at the Proposed Development. Hence, this noise source is not included in the assessment. |
| S5 | 高田 (Ko Tin)<br> | S7 is an open storage site for dumped electronic appliance. This open storage site will be resumed for public housing development at San Hing Road under CEDD's contract B764CL before population intake at the Proposed Development. Hence, this noise source is not included in the assessment. |
| S6 | Ice Manufacturing Factory (德保雪粒) to the southeast of the site<br> | S8 is an ice manufacturing factory. As advised by the operators, their working hours is from 0900 to 1900. The major noisy activity is the loading and unloading activities.<br>This factory will be resumed for public housing development at San Hing Road under CEDD's contract B764CL before population intake at the Proposed Development. Hence, this noise source is not included in the assessment. |
| S7 | Ice Manufacturing Factory (德保雪粒) to the southeast of the Application Site | As advised by the operators, their working hours is from 0900 to 1900. The Major noisy activity is the operation of the air-cooling chiller. There is no breakthrough noise observed. |

| ID | Name and Photo | Description |
|---|---|---|
| | | This factory will be resumed for public housing development at San Hing Road under CEDD's contract B764CL before population intake at the Proposed Development. Hence, this noise source is not included in the assessment. |
| S8 | Enclosed Storage (Long United Furniture Limited) to the southeast of the site | The storage is totally enclosed. As advised by the operators, their working hours is from 0900 to 1800. The noisy industrial activities are the loading / unloading of goods and movement of vehicles. No tonal character activities as well as impulsiveness characteristic activities are observed.<br><br>This storage facility will be resumed for public housing development at San Hing Road under CEDD's contract B764CL before population intake at the Proposed Development. Hence, this noise source is not included in the assessment. |

*Note:*

*(a) SWL of a vehicle repair workshop is referenced to a similar one with several standard activities in an approved planning application (Application No. A/YL-KTN/501). The equipment involved in the activities include pneumatic screwdriver and tyre pump.*

*(b) All of the noise sources have no tonal or impulsiveness characteristics.*

3.3.3 Out of the 8 noise sources identified, 5 of them (S4 to S8) will be resumed for public housing development at San Hing Road under CEDD's contract B764CL before population intake at the Proposed Development. Hence, these noise sources are not included for assessment.

## 3.4 Assessment Methodology

3.4.1 Noise impact from the identified noise sources were determined based on standard acoustical principle and practice.

3.4.2 All identified noise sources were assumed as point source for the purpose to determine attenuation due to distance correction.

3.4.3 Distance attenuation correction, dB(A) = 20 x log (Distance) + 8, where distance is measured from the noise source to noise sensitive receiver (NSR). The assessment only account for the shortest distance between noise source and NSR to present the worst-case scenario.

3.4.4 Façade correction of +3 dB(A) is applied for the reflection on the NSR's façades itself.

## 3.5 Noise Sensitive Receivers

3.5.1 4 representative noise sensitive receivers (NSRs) are selected to assess the worst possible fixed noise impact. The NSRs are selected at 1m away from the façade of

openable window for ventilation purpose and at 1.2m above the floor slab of the unit. Considered that all fixed noise activities are operated at ground level, predicted fixed noise level of NSRs at the ground floor of the development, which is expected to experience the worst fixed noise impact are assessed. The locations of the representative NSRs are presented in **Figure 3.1**.

## 3.6 Assessment Results

3.6.1 Based on the noise level measured for the fixed noise activities and follow the steps stipulated in IND-TM, the predicted noise level at the NSRs under a worst-case scenario is calculated.

3.6.2 The predicted noise levels at the NSRs are below the daytime noise criteria. As there is no night-time operation, comparison to night-time noise criteria is not necessary. The predicted noise results are tabulated in **Table 3.3** with the details presented in **Appendix 3.1.**

**Table 3.3 Predicted Fixed Noise Results (Day time) at Representative NSRs**

| NSR | Predicted Noise Level in dB(A) | Noise Criteria |
|---|---|---|
| T1_FN01 | 58 | 65 dB(A) |
| T1_FN02 | 57 | 65 dB(A) |
| T4_FN01 | 55 | 65 dB(A) |
| T4_FN02 | 53 | 65 dB(A) |

## 3.7 Conclusion

The results confirmed that the predicted noise levels from fixed noise sources at all NSRs within the Proposed Development comply with the criterion of IND-TM issued under the NCO. No adverse fixed noise impact on the Proposed Development is anticipated.

# 4. TRAFFIC NOISE IMPACT ASSESSMENT

## 4.1 Assessment Criteria

4.1.1 Noise standards are recommended in Chapter 9, "Environment", of the Hong Kong Planning Standards and Guidelines (HKPSG) for planning against possible noise impact from road traffic, railway and aircrafts. According to the guidelines, the maximum allowed road traffic noise level, measured in terms of $L_{10\ (1hr)}$, at typical façades of domestic premises is recommended to be 70 dB(A).

4.1.2 The maximum noise levels due to traffic on the surrounding roads in terms of hourly average ($L_{10}$) should not exceed 70 dB(A) at the noise sensitive façades relying on openable windows for ventilation of the Proposed Development.

## 4.2 Assessment Methodology

4.2.1 The assessment is based on the prediction of the maximum $L_{10\ (1hr)}$ traffic noise level at NSRs of the proposed development due to the projected traffic data on the adjacent major road networks for year 2045, which is considered as the maximum traffic projections within 15 years upon occupation of the proposed development in 2030. Traffic data was predicted by the project traffic consultant – CKM Asia Limited. The traffic forecast includes traffic flow and mix in AM and PM peak scenarios.

4.2.2 The U.K. Department of Transport's procedure "Calculation of Road Traffic Noise" was applied to predict the $L_{10\ (1hr)}$ noise level generated from road traffic at openable window for ventilation at habitable room of the proposed development. Then, the predicted noise levels were compared with the HKPSG noise criterion for assessing the impact.

## 4.3 Road Characteristic

4.3.1 Castle Peak Road – Lam Tei is considered as the dominant source contributing to traffic noise impact on the NSRs. The roads in San Hing Tsuen such as Ng Lau Road, San Hing Road and other access roads are also considered in the traffic noise impact assessment. The information on traffic volume and percentage of heavy vehicle using these roads are provided in **Appendix 4.1**.

## 4.4 Noise Sensitive Receivers

4.4.1 The locations of representative NSRs are presented in **Figure 4.1**. The assessment points are taken at 1.2m above the floor of each storey and 1m away from the façades of all openable windows for ventilation at all habitable rooms.

## 4.5 Site Constraints

4.5.1 The Application Site is elongated in shape and gradually narrowed from north to southern end. Therefore, there is limitation on the disposition of building blocks. Since there is no sufficient room for building setback from Castle Peak Road – Lam Tei as well as the TML and LRT, single aspect design has been adopted for the first layer of towers facing Castle Peak Road, which can also provide noise shielding for the towers behind.

## 4.6 Traffic Noise Assessment Results

### Base Scenario

4.6.1 With the building layout design & orientation adopted in the MLP, the predicted traffic noise assessment result for the base scenario shows some exceedance of the traffic noise criterion of 70 dB(A). Results are summarised in **Table 4.1** with details presented in **Appendix 4.2**.

**Table 4.1 Summary of Traffic Noise Assessment Results for Residential Units (Base Scenario)**

| NSR ID | Criterion, $L_{10\ 1hr}$ dB(A) | Noise Impact, AM Peak, $L_{10\ 1hr}$ dB(A)(1)(2) | Noise Impact, PM Peak, $L_{10\ 1hr}$ dB(A)(1)(2) | Mitigation Measures Required [Y/N] | Floors Requiring Mitigation Measures |
|---|---|---|---|---|---|
| TN101 | 70 | 63 - 64 | 62 - 64 | N | - |
| TN102 | 70 | 61 | 60 - 61 | N | - |
| TN103 | 70 | 64 - 65 | 64 - 65 | N | - |
| TN104 | 70 | 70 | 69 - 70 | N | - |
| TN105 | 70 | 70 | 69 | N | - |
| TN106 | 70 | 69 - 70 | 69 | N | - |
| TN107 | 70 | 69 | 69 | N | - |
| TN108 | 70 | 69 | 69 | N | - |
| TN109 | 70 | 63 - 64 | 63 | N | - |
| TN110 | 70 | 62 - 63 | 62 | N | - |
| TN201 | 70 | 63 - 64 | 62 - 63 | N | - |
| TN202 | 70 | 62 - 64 | 62 - 63 | N | - |
| TN203 | 70 | 61 - 64 | 61 - 63 | N | - |
| TN204 | 70 | 62 - 65 | 62 - 65 | N | - |
| TN205 | 70 | 63 - 65 | 62 - 65 | N | - |
| TN301 | 70 | 62 - 64 | 61 - 64 | N | - |
| TN401 | 70 | 69 | 68 - 69 | N | - |
| TN402 | 70 | 69 | 69 | N | - |
| TN403 | 70 | 70 - **71** | 70 | Y | 1/F-2/F |
| TN404 | 70 | 70 - **71** | 70 | Y | 1/F-2/F |
| TN405 | 70 | 70 - **71** | 70 | Y | 1/F-3/F |

| NSR ID | Criterion, $L_{10\ 1hr}$ dB(A) | Noise Impact, AM Peak, $L_{10\ 1hr}$ dB(A)(1)(2) | Noise Impact, PM Peak, $L_{10\ 1hr}$ dB(A)(1)(2) | Mitigation Measures Required [Y/N] | Floors Requiring Mitigation Measures |
|---|---|---|---|---|---|
| TN406 | 70 | 70 - **71** | 70 | Y | 1/F-8/F |
| TN407 | 70 | 70 - **71** | 70 | Y | 1/F-12/F |
| TN408 | 70 | **71** | 70 - **71** | Y | 1/F-13/F |
| TN409 | 70 | **71** | 70 - **71** | Y | 1/F-13/F |
| TN410 | 70 | 69 | 68 - 69 | N | - |
| TN411 | 70 | 67 - 68 | 67 - 68 | N | - |
| TN412 | 70 | 69 | 68 - 69 | N | - |
| TN501 | 70 | 69 - 70 | 69 | N | - |
| TN502 | 70 | 69 - 70 | 69 - 70 | N | - |

Notes:

(1) Bolded values mean exceedance of the relevant noise criteria.

(2) Predicted noise levels and project road contributions are expressed in range unless the minimum and maximum values (rounded to the nearest whole number for noise impacts, and to the nearest one decimal place for project road contribution) are the same.

## 4.7 Recommended Noise Mitigation Measures

4.7.1 Minor exceedance of up to 1 dB(A) is predicted for NSRs facing Ng Lau Road at Tower 4. In order to mitigate the potential adverse traffic noise impact at Tower 4, provision of acoustic windows is recommended for at NSRs facing Ng Lau Road (including NSRs TN403 to TN409). Acoustic windows with up to 1.0 dB(A) noise reduction and conventional acoustic balconies with up to 1.0 dB(A) noise reduction are recommended to alleviate the adverse traffic noise impact. According to EPD's website on Innovative Noise Mitigation Designs and Measures, acoustic windows (baffle-type) and acoustic balconies are capable of achieving a noise reduction of 4-8 dB(A) and 2-2.5 dB(A) respectively, therefore acoustic windows and acoustic balconies are considered adequate to alleviate the predicted road traffic noise impact. The locations of the mitigation measure are shown in **Figure 4.2**.

## 4.8 Conclusion

4.8.1 With the implementation of the recommended noise mitigation measure, the predicted noise levels at all NSRs would comply with the criteria of 70 dB(A). Adverse traffic noise impact is thus not anticipated.

# 5. AIR QUALITY IMPACT ASSESSMENT

## 5.1 Introduction

5.1.1 This section summarises an assessment of the potential air quality impact on the Proposed Development.

## 5.2 Relevant Legislation, Standards & Guidelines

### Air Pollution Control Ordinance (CAP 311)

5.2.1 The *Air Pollution Control Ordinance* ("*APCO*") was enacted in 1983. The *Ordinance* provides a statutory framework for establishing the *Air Quality Objectives* ("*AQOs*") and stipulating the pollution control requirements for air pollution sources. The *APCO* enables the making of subsidiary regulations to deal with specific air pollution sources. It also empowers the Director for Environmental Protection ("DEP") to impose licensing control on major stationary emission sources such as specified processes, and to issue legal notices to air pollution sources to demand remedial actions.

### Hong Kong Air Quality Objectives

5.2.2 Hong Kong's air quality is regulated under the *Air Pollution Control Ordinance (Cap. 311)* ("*APCO*"). The *APCO* specifies *Air Quality Objectives ("AQOs")*, which are statutory limits for a number of pollutants, and the maximum number of times that they may be exceeded in a year for specified averaging periods. The *AQOs* are subject to review every five years. The *AQOs* are benchmarked against the *World Health Organisation's Interim Targets* and the ultimate *Air Quality Guidelines* and hence are health-based. Presented in **Table 5.1** below are the prevailing *HKAQOs* which became effective since 1 January 2022.

**Table 5.1 The Hong Kong Air Quality Objectives (HKAQOs)**

| Pollutant | Concentration (μg/m³) [a] Averaging Periods | | | | |
|---|---|---|---|---|---|
| | 10 Min. | 1 Hour | 8 Hours | 24 Hours | 1 Year [b] |
| Sulphur Dioxide, $SO_2$ | 500 [e] | - | - | 50 [e] | - |
| Respirable Suspended Particulates, RSP [c] | - | - | - | 100 [f] | 50 |
| Fine Suspended Particulates, FSP [d] | - | - | - | 50 [h] | 25 |
| Nitrogen Dioxide, $NO_2$ | - | 200 [g] | - | - | 40 |
| Ozone | - | - | 160 [f] | - | - |
| Carbon Monoxide, CO | - | 30,000 | 10,000 | - | - |
| Lead | - | - | - | - | 0.5 |

| Pollutant | Concentration (μg/m³) [a] Averaging Periods | | | | |
|---|---|---|---|---|---|
| | 10 Min. | 1 Hour | 8 Hours | 24 Hours | 1 Year [b] |

*Notes:*

*a. Measured at 293 K and 101.325 kPa*

*b. Arithmetic mean*

*c. Respirable suspended particulates in air with a nominal aerodynamic diameter of ≤10μm*

*d. Fine suspended particulates in air with a nominal aerodynamic diameter of ≤2.5μm*

*e. Not to be exceeded more than 3 times per year*

*f. Not to be exceeded more than 9 times per year*

*g. Not to be exceeded more than 18 times per year*

*h. Not to be exceeded more than 35 times per year*

**Recommended Buffer Distances in HKPSG to address Vehicular Emissions**

5.2.3 Table 3.1 of the *HKPSG* provides the broad guidelines for locating active open spaces close to potentially polluting uses, viz. road traffic. The recommended buffer distances are reproduced in **Table 5.2**.

**Table 5.2 HKPSG – Recommended Minimum Buffer Distance from Roads**

| Pollution Source | Parameter | Buffer Distance | Permitted Uses |
|---|---|---|---|
| Road and Highways | Type of Road | | |
| | Trunk Road and Primary Distributor | >20m | Active and passive recreational uses |
| | | 3-20m | Passive recreational uses |
| | | <3m | Amenity area |
| | District Distributor | >10m | Active and passive recreational uses |
| | | <10m | Passive recreational uses |
| | Local Distributor | >5m | Active and passive recreational uses |
| | | <5m | Passive recreational uses |
| | Under Flyovers | | Passive recreational uses |

*Source: HKPSG Table 3.1: Guidelines on Usage of Open Space Site*

**Recommended Buffer Distances in HKPSG to address Industrial Air Pollution**

5.2.4 Table 3.1 of the *HKPSG* also provides the broad guidelines for locating active open spaces close to potentially polluting uses, viz. industrial chimneys emissions. The recommended buffer distances are reproduced in **Table 5.3**. The assessment criteria are based on the HKPSG's Guidelines.

**Table 5.3 HKPSG – Recommended Minimum Buffer Distance from Industrial Chimneys**

| Pollution Source | Parameter | Buffer Distance | Permitted Uses |
|---|---|---|---|
| Industrial Areas | Difference in height between industrial chimney exit and the site | | |
| | <20m | >200m | Active and passive recreational uses |
| | | 5 – 200m | Passive recreational uses |
| | 20m – 30m | >100m | Active and passive recreational uses |
| | | 5 – 100m | Passive recreational uses |
| | 30m – 40m | >50m | Active and passive recreational uses |
| | | 5 – 50m | Passive recreational uses |
| | >40m | >10m | Passive recreational uses |

**Source:** HKPSG Table 3.1: Guidelines on Usage of Open Space Site

## 5.3 Review of Baseline Air Quality

### Historical Ambient Air Quality

5.3.1 The Application Site is located in Tuen Mun. The baseline ambient air quality has been established based on long-term (5-year) air quality levels measured at the EPD's Air Quality Monitoring Station ("AQMS") at Tuen Mun.

5.3.2 **Table 5.4** shows the latest past five consecutive years (Year 2018 – 2022) of ambient air quality measured at the Tuen Mun AQMS. The data is analysed and presented to align with the averaging periods, and provides statistics of the number of exceedances against those allowed in the prevailing HKAQOs. The comparison has enabled a check of the compliance status from the perspective of the HKAQOs at the year of monitoring.

5.3.3 The 5-year arithmetic mean of the ambient air quality levels in different averaging periods (1h, 8h, 24h and 1 year) have been computed, and is taken to be representative of the area where the Proposed Development is situated.

**Table 5.4 Air Pollutants Concentrations Measured at the EPD's Tuen Mun AQMS**

| Pollutant | Averaging Time | AQO [1][2] (µg/m³) | Parameter | Concentration [3] (µg/m³) | | | | |
|---|---|---|---|---|---|---|---|---|
| | | | | 2018 | 2019 | 2020 | 2021 | 2022 |
| RSP ($PM_{10}$) | 24-hour | 100 (9) | 10th highest | 87 | 89 | 84 | 87 | 65 |
| | Annual | 50 | -- | 42 | 41 | 34 | 36 | 32 |
| FSP ($PM_{2.5}$) | 24-hour | 75 (9)/ <u>50 (35)</u> | 10th highest / 36th highest | 42 | 42 | 35 | 35 | 33 |
| | Annual | 35/ <u>25</u> | -- | 26 | 24 | 20 | 19 | 18 |
| $NO_2$ | 1-hour | 200 (18) | 19th highest | 177 | 166 | 166 | 172 | 128 |
| | Annual | 40 | -- | **<u>47</u>** | **<u>47</u>** | 40 | **<u>44</u>** | 39 |
| $SO_2$ | 10-minute | 500 (3) | 4th highest | 94 | 45 | 98 | 22 | 29 |
| | 24-hour | 125 (3)/ <u>50 (3)</u> | 4th highest | 20 | 12 | 10 | 9 | 11 |
| $O_3$ | 8-hour | 160 (9) | 10th highest | **<u>173</u>** | **<u>203</u>** | **<u>166</u>** | **<u>161</u>** | **<u>195</u>** |
| CO | 1-hour | 30,000 (0) | Maximum | 1900 | 2050 | 1650 | 1720 | 1480 |
| | 8-hour | 10,000 (0) | Maximum | 1666 | 1758 | 1513 | 1450 | 1345 |

Notes:
(1) The monitoring data are benchmarked against the AQOs at the time of the monitoring. The underlined AQOs are effective since 1 January 2022.
(2) Numbers in brackets is the number of exceedances allowed per year.
(3) Bolded and underlined values exceed the relevant AQO.

### Simulated Background Air Quality

5.3.4 The simulated background levels available from EPD's PATH v2.1 model at Grid (21,44) that coincide with the Application Site have also been compared in perspective. Background air quality levels for the Year 2030 are considered applicable since the Proposed Development would have population intake in Year 2030.

5.3.5 The simulated background air quality in Year 2030 has been analysed similarly and presented in **Table 5.5**. The location of the PATH grid in relationship to the Assessment Area is shown in **Figure 5.1**.

**Table 5.5 Future Background Concentrations from PATH (Year 2030)**

| Air Pollutant | Averaging Period | Path Grid (21,44) | AQOs |
|---|---|---|---|
| $SO_2$ | 10-min (4th highest) | 44 | 500 (a) |
| | 24-hour (4th highest) | 11 | 50 (a) |
| $NO_2$ | 1-hour (19th highest) | 91 | 200 (b) |
| | Annual | 19 | 40 |
| RSP | 24-hour (10th highest) | 71 | 100 (c) |
| | Annual | 27 | 50 |
| FSP | 24-hour (36th highest) | 26 | 50 (b) |
| | Annual | 15 | 25 |
| $O_3$ | 8-hour | **<u>204</u>** | 160 |
| CO | 1-hour | 939 | 30,000 |
| | 8-hour | 870 | 10,000 |

*Notes:*

*(a) Not to exceeded more than 3 times per year.*

*(b) Not to exceeded more than 35 times per year.*

*(c) Not to exceeded more than 9 times per year.*

*(d) Bolded and underlined values exceed the relevant AQO.*

### Observations from the Statistics of the Past Ambient Air Quality and Simulated Background Air Quality

5.3.6 When compared to the HKAQOs at the time of monitoring, the historical ambient air quality monitoring data do show some degree of exceedance as listed below:

- $NO_2$ (2018 – 2019, 2021) (annual average)
- $O_3$ (2018– 2022) (daily 8-h moving average)

5.3.7 The simulated future background air quality in 2030 has also been compared with the prevailing AQOs. All pollutants except $O_3$ are able to comply the AQOs.

5.3.8 Ambient ozone is relatively high and favours more conversion of $NO_x$ to $NO_2$ in the vehicular and chimney emission.

## 5.4 Assessment Area

5.4.1 The assessment area is defined within 500m from the Project Site boundary as shown in **Figure 5.1**.

## 5.5 Identification of Air Pollution Sources

5.5.1 The Proposed Development is for residential use and is not an air pollution source. A small sewage treatment plant is proposed for the treatment of sewage generated by the Proposed Development. The sewage treatment plant with a capacity of about 1,130 $m^3$/day is designed to be housed at the basement levels with the installation of deodourisation equipment to removal at least 99% (for $H_2S$) of odour from the ventilation exhaust to be directed away from air sensitive receivers as far as possible. Hence, adverse odour impact is not expected on the Proposed Development as well as existing air sensitive uses on the opposite side of the nullah. Further odour impact assessment is therefore excluded from this EA.

5.5.2 The presence of any off-site air pollution sources that can affect the Proposed Development have been investigated for the assessment in this EA.

### Vehicular Emissions

5.5.3 The Application Site is bounded by Castle Peak Road – Lam Tei and the Tuen Ma Line and Light Rail tracks to the east and Ng Lau Road and a nullah to the west. As shown in **Figure 5.2**, the buffer distance provided in the indicative design is able to meet the minimum buffer distance of 20m and 5m in the HKPSG (see **Table 5.2)** for the concerned section of Castle Peak Road to the east, which is classified as a Rural Trunk Road in the Annual Traffic Census 2022, as well as the Ng Lau Road (Local Road) to the west of the Application Site.

### Chimney Emissions

5.5.4 Review of the approved EIA report in the vicinity (AEIAR-227/2020 - Development at San Hing Road and Hong Po Road, Tuen Mun) and a site survey was conducted to identify the presence of any active chimney within 500m from the Project Site Boundary in May 2023. One active chimney has been identified as shown in **Figure 5.3** with the details listed in **Table 5.6** below.

**Table 5.6 Identified Active Chimney**

| ID | Description | Height of Chimney | Horizontal Separation from Air Sensitive Use |
|---|---|---|---|
| S1 | Roast Pig Factory | 20m above ground | ~110m |

5.5.5 According to **Table 5.3**, the horizontal separation distance between the Roast Pig Factory and the Proposed Development cannot meet the recommended buffer distance from industrial chimneys, and hence a quantitative air quality assessment is conducted in this EA to address the potential air quality impact at the Application Site.

### Emission from Bus Termini

5.5.6 As shown in **Figure 5.6**, two existing bus termini are identified within the 500m assessment area based on site survey in 2022, namely Siu Hong Court Bus Terminus (open to air) and Fu Tai Estate Bus Terminus (covered under a podium), and will be included in the cumulative air quality impact assessment. The information from the site survey is also adopted in the approved planning application A/TM-LTYY/426 and another site survey was conducted in December 2023 to verify the findings.

### Odour Emission

5.5.7 Based on the site survey conducted in May 2023, no odour source was identified within the 500m assessment area. No odour is detected at the nearby vehicle repairing workshops, nearby nullah and Miu Fat Buddhist Monastery.

### Major Air Emission Sources from 4km of the Project

5.5.8 The asphalt plant at Lam Tei Quarry is within 4km from the Application Site as shown in **Figure 5.7**. According to CEDD's Departmental Report 2015-2019, activities within the Lam Tei Quarry will cease operation in Year 2022/2023. The commencement of the construction phase of Lam Tei Underground Quarry is tentatively targeted at Year 2024/25 according to its Project Profile (PP-643/2022) submitted under the EIAO Ordinance, yet the design of Lam Tei Underground Quarry cannot be confirmed at the time of preparing this EA report. Hence, the cumulative impact from the existing asphalt plant at Lam Tei Quarry is not assessed in this EA report.

## 5.6 Air Sensitive Receivers

5.6.1 Air sensitive receivers ("ASRs") essentially include residential dwellings at the five towers, open space for passive/ active recreational uses, the clubhouse and the fresh air intakes of mechanical ventilation (if any, subject to detailed design). Locations of representative ASRs along the Application Site boundary are selected as shown in **Figure 5.4**.

5.6.2 These representative ASRs fall entirely within the PATH grid (21,44) and hence the simulated meteorological data and future background pollution level of the same grid are used in conjunction in the assessment model.

## 5.7 Air Pollutants of Concern

5.7.1 For cumulative quantitative assessment, the burning of wood (combustion products) of the industrial chimney, involving emissions of $SO_2$, RSP, FSP, and $NO_2$, and the vehicular emissions from open roads, involving RSP, FSP, and $NO_2$, have been included.

## 5.8 Assessment Methodology

### Determination of Assessment Year

5.8.1 The Proposed Development is targeted for occupation in 2030. As such, the worst-case scenario from 2030 to 2045 (15 years after occupation) has to be assessed.

5.8.2 To determine the worst-case assessment year with the highest emission strength from the road vehicles in the assessment area within the next 15 years of full population intake, a sensitivity test should be conducted to compare the total pollutant emissions of Year 2030 (commission year), Year 2037 (interim year) and Year 2045 (15 years upon full population intake).

5.8.3 However, taking into account of the completion of new road network and full population intake year of the nearby public residential housing development (AEIAR-227/2020 - Development at San Hing Road and Hong Po Road, Tuen Mun) is Year 2033, the traffic for the commission year of the Proposed Development might not be able to represent the worst-case scenario. Therefore, instead of Year 2030, traffic data of Year 2033 with the adoption of emission factor of Year 2030 is chosen conservatively as the first year for the sensitivity test analysis. **Appendix 5.1** shows the forecasted flows, VKT and the average speed for the above selected years.

5.8.4 Emission factors generated from EMFAC-HK model v4.3 ($NO_x$, $NO_2$, RSP, FSP) are used to calculate the emission rate for each road link at different times. The initial $NO_2$ have also been subtracted from the total $NO_x$ to obtain the residual NO tailpipe running and starting emission rates.

5.8.5 For running emissions, where applicable, the running exhaust emission rates (g/km) arising from the lowest temperature and RH of the annual meteorological data at the nearby Hong Kong Observatory (HKO) weather station with respect to each combination of speed and vehicle class have been adopted.

5.8.6 For each road link, hourly running exhaust emission rate ($NO_2$, NO, RSP, and FSP) for each vehicle class is determined by the running exhaust emission rate for the average road speed of the concerned road link.

5.8.7 The hourly composite running exhaust emission rate ($NO_2$, NO, RSP, and FSP) is determined by:

$$Hourly\ composite\ running\ exhaust\ emission\ rate\ (g/veh-km) =$$

$$\sum \left[ \begin{array}{c} Hourly\ running\ exhaust\ emission\ rate for\ each\ vehicle\ class \\ x \\ \%\ compositon\ of\ corresponding\ vehicle\ class \end{array} \right]$$

5.8.8 Starting emissions are applicable to roads identified with cold start. Maximum emissions (g/trip) of different durations (from 5 – 720min) are adopted, if applicable. The following roads were identified to have cold start: Access road (south of the site), Fu Hang Road, Fu Shing Street, Access road from To Yuen Wai, Lam Tei Main Street, Fuk Hang Tsuen Road, Tung Lei Path, Ng Lau Road, Tsing Chuen Wai Road, Unnamed Road (east of the nullah), Access roads in San Hing Tsuen, San Hing Road, San Tat Lane, Wong Kong Wai Road, Man Chat Road, Road S3, and Fuk Hang Tsuen Lane.

5.8.9 Based on the latest Annual Traffic Census ("ATC") 2022 published by Transport Department, VKT for rural and local road network accounts for 14.34% of all road networks, which is adopted to estimate the cold start emission.

5.8.10 Emission factors and derivation of emission rates of the above selected modelling years are presented in **Appendix 5.2**.

5.8.11 The calculated total vehicular emissions of $NO_2$, NO, RSP, and FSP from the roads in the assessment area of the above selected modelling years have been compared and summarised in **Table 5.7** below.

**Table 5.7 Summary of Total Vehicular Pollutant Emissions**

| Year | Vehicular Emission Burden (tonnes/year) | | | |
|---|---|---|---|---|
| | **$NO_2$** | **NO** | **RSP** | **FSP** |
| 2030 Emission Factor x 2033 Traffic | 5.25 | 30.37 | 1.35 | 1.24 |
| 2037 Emission Factor x 2037 Traffic | 3.78 | 16.63 | 0.68 | 0.62 |
| 2045 Emission Factor x 2045 Traffic | 5.2 | 21.9 | 0.75 | 0.69 |

5.8.12 The highest vehicular emission year was found to be in the year 2030 Emission Factor x 2033 Traffic for all pollutants. Year 2030 Emission Factor x 2033 Traffic has therefore been selected as the worst assessment year.

**Use of Model-based Screening Approach and Modelling Strategy**

5.8.13 In line with EPD's "*Guidelines on Assessing the 'TOTAL' Air Quality Impacts*", the model-based approach has been adopted. The meteorological data have been extracted on an hour-by-hour basis from the PATH V2.1 system to drive the steady-state Gaussian dispersion model, viz. AERMOD and CALINE4 used in the assessment of near-field dispersion of pollutants.

5.8.14 Meteorological data in Grid (21,44) of the PATH v2.1 system is considered relevant as it coincides with all the ASRs in the assessment area.

5.8.15 Given that the Proposed Development would be occupied in early 2030, the use of the PATH v2.1 simulated background air quality in Year 2030 at the grid is considered conservative.

5.8.16 The concentration levels at ASRs within the dispersion model have been synchronised on the same time axis as the PATH v2.1 generated backgrounds so that cumulative impacts can be computed on an hour-by-hour basis. For $NO_2$ impacts, ozone-limiting conversion can be implemented in the post-processing algorithm to compute the total converted $NO_2$ levels hour-by-hour to facilitate further statistical analysis of the total converted hourly and annual impacts.

**Pre-processing of the PATH v2.1 Meteorological Data**

*AERMOD*

5.8.17 To enable the use of PATH v2.1 meteorological data in a format that can readily be accepted by AERMOD, the hourly meteorological data together with the calculated Albedo Value, Bowen Ratio and Surface Roughness were processed by AERMET to generate the Surface and Profile files, which can then be used by AERMOD in subsequent modelling. The layer 1 (L1) data of the meteorological data have been used. The land use within 1km has been considered for the grid of (21,44). A 10km x 10km region with centroid located at the Project Site has been used to determine the overall Bowen ratio and Albedo value as appended in **Appendix 5.3**.

5.8.18 The AERMET model will adopt the following input data/parameters/options in the simulation:

- Hourly mixing heights (capped between the minimum and maximum value measured at King's Park AWS in Year 2015, i.e. 131m – 1941m) meteorological data from PATH v2.1;
- Wind direction and speed (adjusted for calm conditions by capping the lowest at 1m/s), temperature, relative humidity, pressure and cloud cover from meteorological data from PATH v2.1;
- Input as onsite data; and
- Anemometer height of 8.5m

*CALINE4*

5.8.19 The raw PATH v2.1 meteorological data of Grid (21,44) have been extracted, converted and pre-processed by PCRAMMET. The stability class provided by PATH v2.1 for Grid (21,44) are adopted.

**Use of EMFAC-HK to Calculate Vehicular Emission Factors**

5.8.20 The EMFAC-HK model was originated from the *California Air Resources Board* and was later modified for local use to cater for the vehicle fleet characteristics in Hong Kong. The following EPD guidelines and documents detailed the procedures and assumptions relevant to the model:

- EMFAC-HK User's Guide (Version 4.3 revised in Jan 2022)
- Guideline on Modelling Vehicle Emissions (revised in Jan 2022)
- 2016 Licensed Vehicle by Age and Technology Group Fractions (revised in Jan 2022)

5.8.21 The EMFAC-HK Application[1] v4.3 (revised on Jan 2022) has been used in this EA.

**EMFAC-HK Input Parameters**

*Geographical Area*

5.8.22 "Hong Kong is selected as the Geographical Area.

*Season or Month*

5.8.23 As per EPD's Guideline, "Annual" is selected in this study to evaluate the highest vehicle emission within the Model Year.

*Modelling Mode*

5.8.24 The EMFAC mode was used in generating emission factors in grams of pollutant emitted per vehicle activity for $NO_x$, $NO_2$, RSP and FSP. The $NO_2$ generated was then subtracted from $NO_x$ to generate the emission factors for NO. Outputs from this mode can facilitate the use of CALINE4 in subsequent dispersion modelling.

*Model Year*

5.8.25 According to the analysis in Section **5.8.12**, Year 2030 has been chosen as the Final Model Year (the Calendar Year) in the EMFAC-HK to represent the emissions.

*Exhaust/ Evaporation Technology Fractions*

5.8.26 Vehicle classes are grouped with different exhaust/ evaporation technology group indexes and technology fractions. Each technology group represents a distinct emission control technology. Default exhaust/ evaporation technology fractions are adopted in this assessment.

*Population and Accrual Rate*

5.8.27 Default vehicle populations forecast and accrual rate in EMFAC-HK have been adopted where applicable.

*Speed*

5.8.28 The average road speed of each road link that was provided by the traffic consultant is adopted for input to EMFAC-HK.

[1] Published on EPD's website - http://www.epd.gov.hk/epd/english/environmentinhk/air/guide_ref/emfac.html

*Vehicle Kilometre Travelled (VKT)*

5.8.29 VKT is a product of the number of vehicles and the road length travelled in the assessment area. The peak flows and the diurnal variations have been predicted by the Project Traffic Consultant for the assessment year for the 18 vehicle classes defined in EPD's "*Guideline on Modelling Vehicle Emissions*" for road carriageways within 500m of the Project Site.

5.8.30 The 18 vehicle class distribution required in EMFAC-HK as shown in **Table 5.8** was derived by sectoring the relevant classes in the Transport Department's *Annual Traffic Census* record or vehicle distribution obtained from manual traffic surveys, in proportion to the recorded distribution in EPD document: "*2018 Vehicle Licensed Number by Age and Technology Group Fractions*".

**Table 5.8 Vehicle Classifications used in EMFAC-HK**

| Vehicle Class Description | Fuel | Gross Vehicle Weight (tonnes) | Vehicle Class Name (in rtl output file and traffic data) |
|---|---|---|---|
| Private Cars (PC) | ALL | ALL | PC |
| Taxi | ALL | ALL | Taxi |
| Light Goods Vehicles (≤2.5t) | ALL | ≤2.5t | LGV3 |
| Light Goods Vehicles (2.5-3.5t) | ALL | >2.5 - 3.5t | LGV4 |
| Light Goods Vehicles (3.5-5.5t) | ALL | >3.5 - 5.5t | LGV6 |
| Medium Goods Vehicles (5.5-15t) | ALL | >5.5 - 15t | HGV7 |
| Medium Goods Vehicles (15-24t) | ALL | 15-24t | HGV8 |
| Heavy Goods Vehicles (>24t) | ALL | >24t | HGV9 |
| Public Light Buses | ALL | ALL | PLB |
| Private Light Buses (≤3.5t) | ALL | ≤3.5t | PV4 |
| Private Light Buses (>3.5t) | ALL | >3.5t | PV5 |
| Non-franchised Buses (<6.4t) | ALL | ≤6.36t | NFB6 |
| Non-franchised Buses (6.4-15t) | ALL | >6.36 -15t | NFB7 |
| Non-franchised Buses (15-24t) | ALL | 15-24t | NFB8 |
| Non-franchised Buses (>24t) | ALL | >24t | NFB9 |

| Vehicle Class Description | Fuel | Gross Vehicle Weight (tonnes) | Vehicle Class Name (in rtl output file and traffic data) |
|---|---|---|---|
| Single Deck Franchised Buses | ALL | ALL | FBSD |
| Double Deck Franchised Buses | ALL | ALL | FBDD |
| Motor Cycles | ALL | ALL | MC |

*Trips*

5.8.31 Default trips and VKT for HK total have been adopted. Detailed impact rates have been generated with respect to each combination of temperature, relative humidity (RH) and speed for running exhaust emission, and combination of temperature and duration for cold start emission, if applicable.

*Temperature and Relative Humidity*

5.8.32 The nearest HKO weather station is the Tuen Mun Children and Juvenile Home, the annual lowest temperature and RH is 6°C and 18% respectively and are adopted in EMFAC-HK.

**Calculation of Vehicular Emission Rates**

**Use of CALINE4 for Vehicular Emissions Dispersion Modelling**

5.8.33 In line with EPD's "*Guidelines on Choice of Models and Model Parameters*", vehicular emission impacts arising from open roads have been modelled by CALINE4 – a model that was developed by USEPA based on a steady-state Gaussian dispersion.

5.8.34 To enable the use of Layer 1 (L1) meteorological output from the PATH v2.1 system in a format that can readily be accepted by CALINE4, raw data are extracted, converted and pre-processed by PCRAMMET.

5.8.35 In this EA, the CALINE4 model has used the following input data/ parameters for ASRs in the same grid in the PATH v2.1 system in the dispersion simulation:

- Wind direction and speed from meteorological data from PATH v2.1;
- Hourly mixing heights interpolated by PCRAMMET but capped between the minimum and maximum value measured at King's PARK AWS (2015), i.e. 131m and 1941m;
- Hourly Pasquill stability classes generated by PCRAMMET;
- Horizonal wind direction fluctuation at 22.5º, 17.5º, 12.5º, 7.5º, 3.8º selected based on stability classes provided by PATH v2.1, matching A, B, C, D, E, F respectively and with correction for the average surface roughness;
- A surface roughness factor of 100cm since low-rise buildings are mostly identified within the assessment area; and
- Setting velocity and deposition of default value of 0.0cm/s.

5.8.36 Existing vertical and cantilever noise barriers have been considered in this assessment and presented in **Figure 5.5**. For noise barriers along roads, the line source has been modelled at the top of the barrier and the mixing width was limited to the actual

uncovered road width. For cantilever noise barriers, it has been assumed that dispersion of traffic pollutants is in effect similar to physically shifting the road section towards the tip of the cantilever barrier. Therefore, the alignment of the road section has been shifted by a distance equal to the covered extent in the CALINE4 model.

5.8.37 The locations and an emission inventory of vehicular emission line sources are presented in **Figure 5.5** and **Appendix 5.4**.

**Calculation of Industrial Emission Rates**

5.8.38 As mentioned in Section **5.5.4**, one active chimney has been identified within the assessment area based on the site visit conducted in May 2023 and the approved EIA report "Development at San Hing Road and Hong Po Road, Tuen Mun (AEIAR-227/2020)". Emission rates have been derived based on emission factors from authoritative sources including local EPD studies, local regulations and the "*Compilation of Air Pollutant Emission Factors (AP-42) 5$^{th}$ Ed.*" published by the USEPA. **Appendix 5.5** details the reference sources and evaluations used in the derivation of emission factors/ rates adopted in the assessment. Operation hours were confirmed by site visits and site operators.

**Calculation of Emission from Bus Termini**

5.8.39 The starting emission and running exhaust emission associated with the bus termini are calculated based on the starting emission and running exhaust emission factors predicted by the EMFAC-HK model. Cold idling emission factors are referenced from Calculation of Start Emission in Air Quality Impact Assessment published by EPD and warm idling emission factors are referenced from Road Tunnels: Vehicle Emission and Air Demand for Ventilation published by World Road Association. The traffic data for estimating the bus termini emission is based on site survey results in December 2023, the recently approved planning application A/TM-LTYY/426, online bus schedules and bus routes.

5.8.40 Starting emission for diesel vehicles fitted with selective catalytic reduction (SCR) devices (i.e. buses) shall be adjusted based on the idling emission and are assumed to be released over a total spread distance of 700m from where the starting takes place. Running exhaust and idling emission are assumed to be released right at the spot.

5.8.41 To represent the worst-case scenario, the annual minimum temperature and relative humidity, i.e. 6°C and 18% (**Section 5.8.32** refers), are selected for estimation of the emission factors in EMFAC-HK.

5.8.42 The location of emission source at the bus termini is presented in **Figure 5.6**. The derivation of the emission rates and emission inventory for bus termini are presented in **Appendix 5.6**.

5.8.43 Unlike the open air Siu Hong Court Bus Terminus, the Fu Tai Estate Bus Terminus is covered under a podium. Therefore, the emission from the buses within the Fu Tai Estate Bus Terminus are exhausted via mechanical ventilation system of which the exhaust air louvre is located at the sides openings of the terminus. It is assumed that 100% of the total emissions within the Fu Tai Estate Bus Terminus are emitted via the mechanical ventilation system and 100% of the total emissions within the terminus are emitted via the egress of the terminus as a conservative approach. Negative pressure shall be induced by the mechanical ventilation system such that no emission/ very limited emission shall exit via the ingress of the PTI based on the site surveys and observations in December 2023 and the recently approved planning application A/TM-LTYY/426.

**Use of AERMOD for Industrial Emissions in Dispersion Modelling**

5.8.44 In line with EPD's "*Guidelines on Choice of Models and Model Parameters*", near-field dispersions from point/area/volume sources have been simulated by AERMOD – a model which has been developed based on steady-state Gaussian dispersion. The model has adopted the following input data/ parameters/ options in the simulation:

- "Urban" dispersion option used due to a number of residential buildings in vicinity;
- No wet deposition option selected;
- Graduate Plume Rise and Stack-tip Downwash;
- Buoyancy-induced Dispersion;
- Default Mode; and
- Elevated terrain adopted.

**Post-processing of Dispersion Modelling Results**

5.8.45 Pollutant dispersion from chimney emissions have been simulated using AERMOD model while vehicular emissions have been simulated using the CALINE4 model. Dispersion results have been combined and post-processed for the different averaging periods required for comparison with the relevant AQOs.

*Ozone Limiting $NO_x$-$NO_2$ Conversion*

5.8.46 For $NO_x$ in particular, an algorithm has been built-in to convert a portion of $NO_x$ predicted at ASRs into $NO_2$ using the Ozone Limiting Method (OLM) when they mix with the ambient $O_3$. The OLM assumes a conversion process that is stoichiometrically limited by the ambient $O_3$ levels, and hence the latter can be used to predict the maximum convertible $NO_2$ from $NO_x$ for superimposing onto the initial "out-of-tailpipe/ in-stack" $NO_2$ levels as the base level.

5.8.47 For $NO_2$ from industrial emissions, with reference to industrial coal in Table 4.5 of the Heathrow Airport EIA Report, initial ratio of $NO_2/NO_x$ = 10% is adopted. The total $NO_2$ levels at receiver have been calculated as:

$$[NO_2]_{Predicted} = 10\%\ [NO_x]_{Predicted} + Min(90\%\ [NO_x]_{Predicted} \text{ or } \frac{46}{48}[O_3]_{PATH})$$

*1-h to 10-minute Average Conversion for $SO_2$ Impact*

5.8.48 To enable $SO_2$ levels to be compared with the 10-minute average criterion, the predicted hourly averages have been converted by multiplying factors suggested by Duffee[2] et. al. (1991) in the post-processing of the summated total hourly $SO_2$ levels as follow:

- Conversion factor of 2.45, 2.45, 1.82, 1.43, 1.35, 1.35 to be applied based on PCRAMMET generated stability classes matching any of the A, B, C, D, E, F respectively.

5.8.49 Driven by grid-specific PATH v2.1 meteorological data, the Gaussian models have independently modelled all three tiers' impacts (no Tier 1 impact as the Proposed

[2] Richard A. Duffee, Martha A. O'Brien and Ned Ostojic (1991) Odor Modeling - Why and How. Page 295, Recent Developments and Current Practices in Odor Regulations, Controls and Technology. Air & Waste Management Association, 1991

Development itself is not an air pollution source). The outputs are combined and post-processed on an hour-by-hour basis for subsequent statistical analysis.

## 5.9 Results of Prediction

5.9.1 A summary of the predicted $NO_2$, RSP, FSP and $SO_2$ at the representative ASRs are presented in **Table 5.9** with detailed assessment results provided in **Appendix 5.7**. Results have revealed that the cumulative impact levels at all ASRs will comply with their respective HKAQOs in respect of all time averages for $NO_2$, RSP, FSP, and $SO_2$.

**Table 5.9 Predicted Cumulative Air Quality Impact**

| ASR ID | Pollutant Concentration (µg/m³) [1] | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| | $NO_2$ | | RSP | | FSP | | $SO_2$ | |
| | 1-hr [2] | Annual [2] | 24-hr (10th highest) [3] | Annual [2] | 24-hr (36th highest) [4] | Annual [2] | 10-min (4th highest) [2] | 24-hr (4th highest) [5] |
| | **200** | **40** | **100** | **50** | **50** | **25** | **500** | **50** |
| A01 | 91-109 | 19-30 | 71-72 | 27-28 | 26 | 15-16 | 34 | 11 |
| A02 | 91-107 | 19-28 | 71-72 | 27-28 | 26 | 15-16 | 34 | 11 |
| A03 | 91-107 | 19-28 | 71-72 | 27-28 | 26 | 15-16 | 34 | 11 |
| A04 | 91-108 | 19-28 | 71-72 | 27-28 | 26 | 15-16 | 34 | 11 |
| A05 | 91-110 | 19-28 | 71-72 | 27-28 | 26 | 15-16 | 34 | 11 |
| A06 | 91-107 | 19-27 | 71-72 | 27-28 | 26 | 15-16 | 34 | 11 |
| A07 | 91-105 | 19-26 | 71 | 27-28 | 26 | 15-16 | 34 | 11 |
| A08 | 91-102 | 19-26 | 71 | 27-28 | 26 | 15-16 | 34 | 11 |
| A09 | 91-103 | 19-26 | 71 | 27-28 | 26 | 15-16 | 34 | 11 |
| A10 | 91-104 | 19-27 | 71 | 27-28 | 26 | 15-16 | 34 | 11 |

## 5.10 Mitigation Measures & Recommendation

5.10.1 Given that full compliance of pollutant concentrations stipulated in the HKAQOs are predicted at all air sensitive uses, no mitigation measures for air quality will need to be adopted in the scheme/ detailed design.

## 5.11 Summary

5.11.1 During operation phase, the Proposed Development is subject to emissions from a chimney across the Castle Peak Road – Lam Tei and the surrounding road network within 500m of the Application Site. Although the allowed buffer distance between the Proposed Development and Castle Peak Road – Lam Tei and Ng Lau Road can meet the HKPSG guidelines, the separation required for the identified chimney cannot be achieved for the Proposed Development. As such, a quantitative assessment of air quality impacts due to the chimney and vehicular emissions has been conducted. Full compliance of AQOs is predicted at all ASRs of all heights for all pollutants and thus there would be no adverse air quality impact on the Proposed Development.

# 6. CONCLUSION

## 6.1 Railway Noise Impact

6.1.1 Railway noise impact due to Tuen Ma Line and Light Rail Transit on the Application Site are predicted. The cumulative results show that the predicted noise levels at the representative noise sensitive receivers would comply with the relevant noise criteria stipulated in the HKPSG with the implementation of mitigation measures (i.e. acoustic window/balcony). Therefore, it is anticipated that the Application Site will not be subject to adverse railway noise impact.

## 6.2 Fixed Noise Impact

6.2.1 Although some car repairing workshops and storage sites were identified in the vicinity of the Application Site, the predicted noise levels from the identified fixed noise sources on the NSRs would be well below the relevant noise criteria stipulated in the HKPSG. Therefore, it is anticipated that the Application Site will not be subject to adverse fixed noise impact.

## 6.3 Traffic Noise Impact

6.3.1 With the implementation of mitigation measures (i.e. acoustic window/balcony), full compliance of the HKPSG recommended criterion of 70 dB(A) for $L_{10\ (1\text{-}hr)}$ would be achieved at all NSRs. Therefore, the Proposed Development will not subject to adverse traffic noise impact.

## 6.4 Air Quality Impact

6.4.1 The Proposed Development will potentially be impacted by the emissions from chimney, vehicles and bus termini. The predicted cumulative air quality impacts at all ASRs would fully comply with the HKAQOs, and hence, adverse air quality impacts are not anticipated.

## 6.5 Overall Conclusion

6.5.1 This EA report confirms the Proposed Development is environmentally acceptable.

Dear Ms. Yu,

**Re: Re: Proposed Residential Development at D.D.130, Lam Tei, Tuen Mun**
**Request for Tuen Ma Line and Light Rail Transit Information**

We refer to your letter (ref.: FECTMLT-EI00_0_0004L.23.docx) dated 17 March 2023 requesting operational information regarding Tuen Ma Line (TML) and Light Rail Transit (LRT).

Please be informed that the information provided in our letter dated 7 September 2021 (ref.: T&ESD/E&IC/ES/EnvE/L1096) is still valid as of the date of this reply, except the following updates:

- There are currently 8 cars per train for the operation condition of TML. However, according to the latest Environmental Permit (EP) for West Rail, the ultimate maximum train cars would be 9 cars.
- For the operational frequency for LRT (from Nai Wai Stop to Siu Hong Stop – Route 610, 614, 615 and 751), the current peak train frequency during the period of 07:00-23:00 hours and 23:00 to 07:00 is about 27 trains per hour per direction and 31 trains per hour per direction respectively. The current train frequency for both directions in one-day operation is about 764 trains, including non-passenger trains.

Please be reminded that any information that may come to your knowledge or come into your possession from MTR Corporation Limited shall only be used solely as reference for this captioned project. Further distribution and/or publication of the above information for purposes not connected with the captioned project are strictly prohibited without the prior consent of MTR Corporation Limited. Please also note that any such information is subject to change without prior notification.

Should you have any additional enquiries, please feel free to contact our Lead Environmental Manager, Ms. Catherine Leung at 2993 4127.

Yours sincerely,

HK Chan

Dear Ms. Yu,

**Re: Proposed Residential Development at D.D. 130, Lam Tei, Tuen Mun**
**Request for West Rail Line Railway and Light Rail Transit Information**

We refer to your letter dated 17 August 2021 (ref.: FECTMLT-EI00_0_0001L.21) requesting operational information regarding Tuen Ma Line (TML) and Light Rail Transit (LRT).

Please be informed that the information provided in our letter dated 22 October 2019 (ref.: T&ESD/TS&SE/EnvE/L1017) is still valid as of the date of this reply, except the following updates:

- The daily operating hours for TML and LRT at the concerned section are from approximately 05:30 to 01:15 hours and 05:15 to 01:18 hours respectively.
- The current train frequency for both directions in one-day operation for TML is about 519 trains, including non-passenger trains.
- For the operational frequency for LRT (from Nai Wai Stop to Siu Hong Stop – Route 610, 614, 615 and 751), the current peak train frequency during the period of 23:00 to 07:00 hours is about 33 trains per hour per direction. The current train frequency for both directions in one-day operation is about 798 trains, including non-passenger trains.

Please be reminded that any information that may come to your knowledge or come into your possession from MTR Corporation Limited shall only be used solely as reference for this captioned project. Further distribution and/or publication of the above information for purposes not connected with the captioned project are strictly prohibited without the prior consent of MTR Corporation Limited. Date: 22 OCT 2019

Attention: Ms. Katie Yu

**By Post and Fax**
**(Fax no.: 3465 2899)**

Dear Ms. Yu,

**Re: Proposed Residential Development at D.D. 130, Lam Tei, Tuen Mun**

**Request for Information of West Rail Line Railway and Light Rail Transit**

We refer to your letter dated 30 September 2019 (ref.: STATMSHTEI01_0_0002L.19) requesting operational information regarding West Rail Line (WRL) and Light Rail Transit (LRT).

Operating Hours
For WRL, the daily operating hours at the concerned section are from approximately 05:00 to 01:00 hours.

For LRT, the daily operating hours at the concerned section are from approximately 05:15 to 01:15 hours.

Number of Cars per Train
Please note that there will be 8 cars per train for the future operating condition of the Tuen Ma Line. However, according to the Environmental Permit for West Rail available via EPD website, the ultimate maximum train cars would be 9 cars.

For LRT, the arrangement of single or coupled-set vehicles will vary depending on the traffic needs and is subject to change without prior notification. For environmental assessment purposes, you may wish to work on the assumption that all vehicles are in coupled-set where appropriate.

Operational Headway for WRL
- The future ultimate daily peak operating train frequency during the period of 07:00-23:00 hours is about 28 trains per hour per direction.
- For the future ultimate daily peak operating train frequency during the period of 23:00-07:00 hours, please refer to the latest Environmental Permit for West Rail Available via the EPD website.
- The current train frequency for both directions in one-day operation is about 551 trains, including non-passenger trains.

MTR Headquarters Building, Telford Plaza, Kowloon Bay,
Kowloon, Hong Kong. GPO Box 9916, Hong Kong
Tel (852) 2993 2111 Fax (852) 2798 8822

電話 (852) 2993 2111 傳真 (852) 2798 8822

MTR

Our ref: T&ESD/TS&SE/EnvE/L1017
Date : 22 OCT 2019

Operational Frequency for LRT (From Nai Wai Stop to Siu Hong Stop – Route 610, 614, 615 and 751)

- The current peak train frequency during the period of 07:00-23:00 hours is about 28 trains per hour per direction.
- The current peak train frequency during the period of 23:00 to 07:00 hours is about 27 trains per hour per direction.
- The current train frequency for both directions in one-day operation is about 913 trains, including non-passenger trains.

Please note that Light Rail service frequencies are subject to change without prior notification due to future patronage growth. As such, please consider allowing a buffer on the assessment assumptions when estimating future possible environmental impacts.

Speed Profile

For WRL, the current maximum train speed for the section of track between Siu Hong Station and Tin Shui Wai Station is 100 km/h for both directions. However, please note that the latest Environmental Permit for WRL has considered a maximum operating speed of 130km/hr (i.e. EP limit) to cater for potential speed increment in the future.

For LRT, the current maximum train speed for the section of track between Nai Wai Stop and Siu Hong Stop is 70 km/h for both directions.

Please be reminded that any information that may come to your knowledge or come into your possession from MTR Corporation Limited shall only be used solely as reference for this captioned project. Further distribution and/or publication of the above information for purposes not connected with the captioned project are strictly prohibited without the prior consent of MTR Corporation Limited. Please also note that any such information is subject to change without prior notification.

Should you have any additional enquiries, please feel free to contact our Environmental Engineering Manager, Ms. Catherine Leung at 2993 4127.

Yours sincerely,

HK Chan
Deputy General Manager – Train Services & Systems Engineering
