

Appendix VI

Revised Traffic Impact Assessment

**Proposed Rezoning from “Residential (Group B)1” Zone to
“Residential (Group B)4” Zone for Medium-Density Housing
Development to Include a Footpath for Public use at Various
Lots and Adjacent Government Land in DD130, Lam Tei,
Tuen Mun (Application no. Y/TM-LTYY/11)**

Traffic Impact Assessment

Final Report

November 2024

Prepared by: CKM Asia Limited

Prepared for: Wing Mau Tea House Limited

Proposed Rezoning from “Residential (Group B)1” Zone to “Residential (Group B)4” Zone for Medium-Density Housing Development to Include a Footpath for Public use at Various Lots and Adjacent Government Land in DD130, Lam Tei, Tuen Mun (Application no. Y/TM-LTY/11)

1.0 INTRODUCTION

Background

- 1.1 The subject site is located in D.D.130, Lam Tei, Tuen Mun (the “Subject Site”). At present, the Subject Site is unoccupied, and access to the Subject Site via an existing unnamed road which is connected to Ng Lau Road. The location of the Subject Site is shown in **Figure 1.1**.
- 1.2 A Section 12A planning application for the minor relaxation of the maximum plot ratio restriction to 2.5 for residential use at the Subject Site was approved by the Town Planning Board (TPB ref: Y/TM-LTY/9) on 24th September 2021 (the “Approved Scheme”). This Section 12A planning application is for minor relaxation of the maximum plot ratio restriction for residential use at the Subject Site from the approved 2.5 to 5.0 (the “Proposed Development”).
- 1.3 Against this background, CKM Asia Limited, a traffic and transportation planning consultancy firm, was commissioned by the Owner to conduct a traffic impact assessment in support of the Proposed Development. This report presents the findings and recommendations of the traffic impact assessment for the Proposed Development.

Structure of Report

- 1.4 The report is structured as follows:

Chapter One	- Gives the background of the project;
Chapter Two	- Describes the existing situation;
Chapter Three	- Presents the Proposed Development;
Chapter Four	- Describes the traffic impact analysis; and
Chapter Five	- Gives the overall conclusion.

2.0 EXISTING SITUATION

The Subject Site

- 2.1 The Subject Site is bounded by the Light Rail Transit (“LRT”) and the Tuen Ma Line to the East, and a nullah to the West. Access to the Subject Site is from the south and is via a bridge over the nullah. The Access Road is connected to Ng Lau Road.

The Road Network

- 2.2 Ng Lau Road is a single carriageway 2-lane 2-way local distributor which connects with the Lam Tei Interchange to the south and Castle Peak Road - Lam Tei underneath the Kong Sham Western Highway. It provides access to villages, e.g., San Hing Tsuen, Tuen Tsz Wai, and Tsing Chuen Wai.
- 2.3 Lam Tei Interchange connects Tsing Lun Road, Hong Po Road, Ng Lau Road, Castle Peak Road – Lam Tei, Yuen Long Highway and Tuen Mun Road. It is the main access for traffic accessing the Subject Site and strategic routes.

Existing Traffic Flows

- 2.4 To quantify the junction and road link flows in the vicinity of the Subject Site, manual classified counts were conducted at 0700 – 0900 and 1700 – 1900 on Tuesday, 18th April 2023, Wednesday, 19th April 2023 and Wednesday, 26th April 2023, and were re-conducted on Wednesday, 8th May 2024 at the junctions and road links listed in **Table 2.1**.

TABLE 2.1 SURVEYED JUNCTIONS AND ROAD LINKS

<u>Reference</u>	<u>Junction</u>
J1:	Unnamed Road/ Access Road
J2:	Ng Lau Road/ Unnamed Road
J3:	Ng Lau Road/ Lam Tei Interchange
J4:	Tsing Lun Road/ Hong Po Road/ Lam Tei Interchange
J5:	Lam Tei Interchange
J6:	Lam Tei Interchange/ Castle Peak Road – Lam Tei
J7:	Tsing Lun Road/ Tsz Tin Road
J8:	San Hing Road/ Ng Lau Road (Southern)
J9:	San Hing Road/ Ng Lau Road (Northern)
J10:	T-junction at San Hing Road
J11:	Ng Lau Road / Castle Peak Road – Lam Tei
J12:	Hong Po Road / Yan Tin Estate Access Road
<u>Reference</u>	<u>Road Link</u>
L1:	Castle Peak Road – Lam Tei
L2:	Castle Peak Road – Lingnan
L3:	Yuen Long Highway
L4:	Tuen Mun Road
L5:	San Hing Road
L6:	Ng Lau Road (north of J9)
L7:	Ng Lau Road (south of J2)
L8:	Lam Tei Interchange (between J3 and J5)
L9:	Tsing Lun Road

- 2.5 The locations of these junctions, road links and the area of influence (the “AOI”) are shown in **Figure 2.1** and the junction layouts are shown in **Figures 2.2 – 2.13** respectively.
- 2.6 The traffic counts are classified by vehicle type to enable traffic flows in passenger car units (“pcu”) to be calculated. The AM and PM peak hours identified from the surveys are found to be between 0800 – 0900 hours and 1700 – 1800 hours respectively. The existing AM and PM peak hour junction in pcu/hour and road link flows in veh/hr are presented in **Figures 2.14 – 2.15**.

Existing Junction Performance

- 2.7 The existing junction performance of the junctions are calculated based on the traffic flows obtained from the survey, and the analysis was undertaken using the methods outlined in Volume 2 of the Transport Planning and Design Manual (“TPDM”). The results are summarised in **Table 2.2** and the detailed calculations are found in **Appendix A**.

TABLE 2.2 EXISTING JUNCTION PERFORMANCE

Ref.	Junction	Type of Junction (Parameter)	AM Peak	PM Peak
J1	Unnamed Road/ Access Road	Priority (DFC)	0.000	0.000
J2	Ng Lau Road/ Unnamed Road	Priority (DFC)	0.033	0.032
J3	Ng Lau Road/ Lam Tei Interchange	Signal (RC)	91%	84%
J4	Tsing Lun Road/ Hong Po Road/ Lam Tei Interchange	RA (DFC)	0.545	0.591
J5	Lam Tei Interchange	RA (DFC)	0.522	0.489
J6	Lam Tei Interchange/ Castle Peak Road – Lam Tei	Signal (RC)	120%	215%
J7	Tsing Lun Road/ Tsz Tin Road	Signal (RC)	58%	92%
J8	San Hing Road/ Ng Lau Road (Southern)	Priority (DFC)	0.061	0.040
J9	San Hing Road/ Ng Lau Road (Northern)	Priority (DFC)	0.227	0.498
J10	T-junction at San Hing Road	Priority (DFC)	0.008	0.002
J11	Ng Lau Road / Castle Peak Road – Lam Tei	Signal (RC)	139%	132%
J12	Hong Po Road / Yan Tin Estate Access Road	Priority (DFC)	0.066	0.011

Note: RC – reserve capacity; DFC – design flow/capacity ratio, RA – Roundabout

- 2.8 The above results indicate that the surveyed junctions currently operate with capacities during the AM and PM peak hours.

Link Operational Performance

- 2.9 The link operational performance of the road links are calculated based on the existing traffic flows obtained from the traffic survey, and the analysis was undertaken using the methods outlined in Volume 2 of the Transport Planning and Design Manual (“TPDM”). The results are summarised in **Table 2.3**.

TABLE 2.3 EXISTING LINK CAPACITY ASSESSMENT

Ref	Link		Adjusted Design Flow (veh/hr)		Traffic Demand (veh/hr)		V/C Ratio	
			AM Peak	PM Peak	AM Peak	PM Peak	AM Peak	PM Peak
L1	Castle Peak Road – Lam Tei	NB	2,604 ⁽¹⁾	2,604 ⁽¹⁾	766	1,317	0.29	0.51
		SB	2,604 ⁽¹⁾	2,604 ⁽¹⁾	1,448	766	0.56	0.29
L2	Castle Peak Road – Lingnan	NB	2,800	2,800	417	452	0.15	0.16
		SB	2,800	2,800	672	472	0.24	0.17
L3	Yuen Long Highway	NB	4,700	4,700	3,759	3,181	0.80	0.68
		SB	4,700	4,700	3,642	3,988	0.77	0.85

L8	Lam Tei Interchange (between J3 and J5)	EB	2,800	2,800	1,055	713	0.38	0.25
		WB	2,800	2,800	1,108	1,199	0.40	0.43
L9	Tsing Lun Road	NB	1,900	1,900	519	409	0.27	0.22
		SB	1,900	1,900	825	735	0.43	0.39

NB – northbound SB – southbound EB – eastbound WB – westbound

⁽¹⁾ With reference to paragraph 2.4.1.2 and table 2.4.1.2, Chapter 2.4, Volume 2 of TPDM, the design flow is to be reduced when the expected proportion of heavy vehicles exceeds 15%. The table below presents the adjusted design flow based on the proportion of heavy vehicles (“HV%”).

Road Type	Design Flow (veh/hr)	Adjusted Design Flow (veh/hr)		
		0-15 HV%	15-20 HV%	20-25 HV%
		0% reduction	7% reduction	10% reduction
Expressway / trunk road (Dual 3 lanes – 11m-wide)	4,700	4,700	4,371	4,230
Primary Distributor (Dual 3 lanes – 7.3m-wide)	2,800	2,800	2,604	2,520
District Distributor (Single 4 lanes – 13.5m-wide)	1,900	1,900	1,767	1,710
Local Roads (Single 2 lanes)	800	800	744	720

2.10 The above results show that the assessed road links operate with sufficient capacity.

Public Transport Facilities

2.11 The Subject Site is located close to public transport services, including franchised buses and public light buses and these operate within 400 metres or some 8-minutes’ walk away. Details of these public transport services are presented in **Table 2.4**. The location and major pedestrian routes of these public transport services are shown in **Figure 2.16**.

Survey on Road-based Public Transport Services Located in the Vicinity

Road-based Public Transport

2.12 Survey on road-based public transport services listed in **Table 2.4** was conducted during the AM and PM peak periods on Thursday, 18th January 2024 at the bus stops near the subject site.

2.13 The AM and PM peak hours identified from the surveys are found to be between 0715 – 0815 hours and 1830 – 1930 hours respectively. The survey locations are shown in **Figure 2.16**. The survey results are summarized in **Table 2.5** and the detailed information are shown in **Appendix B**.

TABLE 2.5 OCCUPANCY OF EXISTING ROAD-BASED PUBLIC TRANSPORT SERVICES OPERATING NEAR THE SUBJECT SITE

Direction	AM Peak			PM Peak		
	No. of Pass.		Occupancy [c] = [b]/[a]	No. of Pass.		Occupancy [f] = [e]/[d]
	Cap. [a]	Occ. [b]		Cap. [d]	Occ. [e]	
Outward bound	8,520	3,178	37%	2,160	671	31%
Inward bound	2,400	832	35%	5,880	2,231	38%

Pass. – Passenger Cap. – Capacity Occ. - Occupied

2.14 The above results indicate that the surveyed road-based public transport services currently operate with spare capacities during the AM and PM peak hours.

Rail-based Public Transport

2.15 Based on the information obtained from the Legislative Council, the operational performance for MTR Tuen Ma Line in 2023 is summarized in **Table 2.6**.

TABLE 2.6 OPERATIONAL PERFORMANCE OF MTR TUEN MA LINE

Item	Parameters
Maximum carrying capacity when train frequency is maximized [a]	70,000 passengers / hour ⁽¹⁾
Existing carrying capacity [b]	58,800 passengers / hour ⁽¹⁾⁽²⁾
Current Patronage [c]	35,700 passengers / hour
Current Loading [c]/[b] {Critical Link}	61% {Tsuen Wan West to Mei Foo}
Loading compared with maximum carrying capacity [c]/[a]	51%

Source: Reply Serial No. TLB162 for Question Serial No. 2402, Controlling Officer’s Reply, Examination of Estimates of Expenditure 2024-25. Finance Committee. Legislative Council. 18 April 2024.

<<https://www.tlb.gov.hk/eng/legislative/transport/special/land/TLB-2-e1.pdf>>

⁽¹⁾ Carrying capacities are calculated under 6 ppsm

⁽²⁾ According to the reply, existing train frequency has not yet increased to the maximum level as permitted by the signalling system.

2.16 **Table 2.6** shows that the MTR Tuen Ma Line operates at 61% of its current capacity, or 51% of its maximum carrying capacity during the peak hour.

Light Rail Transit (LRT) Transport

2.17 Survey on LRT transport services at Lam Tei LRT stops was conducted during the AM and PM peak periods on Thursday, 18th January 2024. The AM and PM peak hours identified from the surveys are found to be between 0715 – 0815 hours and 1830 – 1930 hours respectively. The survey results are summarized in **Table 2.7**.

TABLE 2.7 OPERATIONAL PERFORMANCE OF LRT SERVICES AT LAM TEI STOP

Direction	No. of Trips.			No. of Passenger		Occupancy [c] = [b]/[a]
	Single	Coupled-set	Total	Capacity ⁽¹⁾ [a]	Occupied [b]	
AM Peak Hour						
Yuen Long bound	13	10	23	6,600	3,290	50%
Tuen Mun bound	12	12	24	7,200	5,796	81%
PM Peak Hour

Tuen Mun bound	12	10	22	6,400	3,092	48%

⁽¹⁾ Assumed capacity of 200 passengers per trip for single Light Rail Vehicle (LRV) and 400 passengers per trip for coupled-set LRV

2.18 **Table 2.7** shows that the surveyed LRT services at Lam Tei Stop currently operate with spare capacities during the AM and PM peak hours.

Existing Footpath Level-Of-Service

2.19 To quantify the existing pedestrian flows, pedestrian counts were conducted during the AM and PM peak periods on Thursday, 18th January 2024 at footpaths located in the vicinity of Proposed Development, and the observed peak hour pedestrian flows are shown in **Figure 2.17**.

2.20 The Level-Of-Service (“LOS”) of a pedestrian footpath depends on its width and number of pedestrians using the facility. Description of the LOS at walkway is obtained from Volume 6 of the TPDM and is presented in **Table 2.8**.

TABLE 2.8 DESCRIPTION OF PEDESTRIAN FOOTPATH LOS

LOS	Flow Rate (ped/min/m)	Description
A	≤ 16	Pedestrians basically move in desired paths without altering their movements in response to other pedestrians. Walking speeds are freely selected, and conflicts between pedestrians are unlikely.
B	16 – 23	Sufficient space is provided for pedestrians to freely select their walking speeds, to bypass other pedestrians and to avoid crossing conflicts with others. At this level, pedestrians begin to be aware of other pedestrians and to respond to their presence in the selection of walking paths.
C	23 – 33	Sufficient space is available to select normal walking speeds and to bypass other pedestrians primarily in unidirectional stream. Where reverse direction or crossing movement exist, minor conflicts will occur, and speed and volume will be somewhat lower.
D	33 – 49	Freedom to select individual walking speeds and bypass other pedestrians is restricted. Where crossing or reverse-flow movements exist, the probability of conflicts is high and its avoidance requires changes of speeds and position. The LOS provides reasonable fluid flow; however considerable friction and interactions between pedestrians are likely to occur.
E	49 – 75	Virtually, all pedestrians would have their normal walking speeds restricted. At the lower range of this LOS, forward movement is possible only by shuffling. Space is insufficient to pass over slower pedestrians. Cross- and reverse-movement are possible only with extreme difficulties. Design volumes approach the limit of walking capacity with resulting stoppages and interruptions to flow.
F	> 75	Walking speeds are severely restricted. Forward progress is made only by shuffling. There are frequent and unavoidable conflicts with other pedestrians. Cross- and reverse-movements are virtually impossible. Flow is sporadic and unstable. Space is more characteristics of queued pedestrians than of moving pedestrian streams.

Source: Volume 6 Chapter 10 of TPDM

2.21 The observed peak hour pedestrian flows LOS assessment is presented in **Table 2.9**.

TABLE 2.9 EXISTING LOS ASSESSMENT

Location	Clear Width ⁽¹⁾ [Effective Width] (m)	Peak Period	Flow (ped/ hour)	Flow rate (ped/min/m)	LOS
P1. Footpath on the footbridge connected to Ng Lau Road	2.0[1.0]	AM	150	2.5	A
		PM	99	1.7	A
P2. Footpath between Lam Tei LRT stop and bus stop at Castle Peak Road – Lam Tei	2.5[1.5]	AM	315	3.5	A
		PM	210	2.3	A
P3. Footbridge over Castle Peak Road – Lam Tei	2.5[1.5]	AM	216	2.4	A
		PM	105	1.2	A
P4. Southern Footpath of San Hing Road	1.5[0.5]	AM	45	1.5	A
		PM	30	1.0	A
P5. Eastern Footpath of Ng Lau Road	2.0[1.0]	AM	189	3.2	A
		PM	120	2.0	A

⁽¹⁾ The width excludes railing and obstructions.

2.22 The above results indicate that the surveyed footpaths currently operate with LOS A during the AM and PM peak. As stated in the TPDM, LOS A to C is considered as an acceptable level of service: “In general, LOS C is desirable for most design at streets with dominant ‘living’ pedestrian activities”.

3.0 THE PROPOSED DEVELOPMENT

Key Parameters

3.1 The Proposed Development key parameters are presented in **Table 3.1**.

TABLE 3.1 KEY PARAMETERS

Item		Proposed Development
Development Site Area		About 8,896 m ²
Domestic Plot Ratio		5.0
Domestic GFA		44,480 m ²
Flat Mix (GFA)	Flat Size ≤ 40m ²	1,110
	40m ² < Flat Size ≤ 70m ²	275
Total number of Flats		1,385

Provision of Internal Transport Facilities

3.2 The internal transport facilities for the Proposed Development are provided in accordance with the recommendations of the Hong Kong Planning Standards and Guidelines (“HKPSG”) and are presented in **Table 3.2**.

TABLE 3.2 PROVISION OF INTERNAL TRANSPORT FACILITIES FOR PROPOSED DEVELOPMENT

Facility	HKPSG Recommendation	Provision
Car Parking Space	<p>For Residents: Parking Requirement = GPS x R1 x R2 x R3 Global Parking Standard (GPS): 1 car parking space per 4 - 7 flats Demand Adjustment Ratio (R1): 0.5 for flat size ≤ 40 m² GFA 1.2 for flat size 40 – 70 m² GFA Accessibility Adjustment Ratio(R2): 1.0 outside 500m-radius of rail station Development Intensity Adjustment Ratio (R3): 1.0 for Plot Ratio 2.0 – 5.0</p> <p>For 1,100 flats with flat size less than 40 m² GFA Minimum: (1,110 / 7 x 0.5 x 1.0 x 1.0) = 79.3, say 80 nos. Maximum: (1,110 / 4 x 0.5 x 1.0 x 1.0) = 138.8, say 139 nos.</p> <p>For 275 flats with flat size 40 – 70 m² GFA Minimum: (275 / 7 x 1.2 x 1.0 x 1.0) = 47.2, say 48 nos. Maximum: (275 / 4 x 1.2 x 1.0 x 1.0) = 82.5, say 83 nos.</p> <p>Total Minimum = 80 + 48 = 128 nos. Maximum = 139 + 83 = 222 nos.</p>	<p>222 nos. @ 5.0m (L) x 2.5m (W) x 2.4m (H) = HKPSG maximum</p>
	<p>For Visitors: Visitor car parking for private residential developments with more than 75 units per block should be provided at 5 visitor spaces per block in addition to the recommendations, or as determined by the Authority.</p> <p>For 5 blocks: 5 x 5 nos. = 25 nos.</p>	
	<p>Total Car Parking Space: Minimum = 128 + 25 = 153 nos. Maximum = 222 + 25 = 247 nos. Note: For total no. of car parking space in lot = 151 – 250 nos., the Building (planning) regulation 72 require provision of 3 accessible car parking spaces</p>	<p>247 nos. (including 3 accessible car parking spaces)</p>

TABLE 3.2 PROVISION OF INTERNAL TRANSPORT FACILITIES FOR PROPOSED DEVELOPMENT (CONT'D)

Facility	HKPSG Recommendation	Provision
Motorcycle Parking Space	<p>For Residential Uses: TD Comment: 1 motorcycle parking space shall be provided for every 81 flats</p> <p>For 1,385 flats: $1,385 / 81 = 17.1$, say 18 nos.</p>	<p>18 nos. @ 2.4m (L) x 1.0m (W) x Min. 2.4m (H) = fulfil TD comment, OK</p>
Goods Vehicle Loading/ Unloading Bay	<p>For Residential Uses: Minimum of 1 loading / unloading bay for goods vehicles within the site for every 800 flats or part thereof, subject to a minimum of 1 bay for each housing block or as determined by the Authority.</p> <p>For 5 blocks, each block less than 800 flats: 5 no.</p>	<p>5 nos. @ 11.0m (L) x 3.5m (W) x Min. 4.7m (H) = HKPSG minimum, OK</p>
Bicycle Parking Spaces	<p>For Residential Uses: TD Comment: 1 space per 5 flats with flat size < 70m².</p> <p>$= 1,385 \div 5$ $= 277$ nos.</p>	<p>277 no. @ 1.8m (L) x 0.8m (W) x Min. 2.4m (H) = fulfil TD comment, OK</p>

3.3 **Table 3.2** shows that the internal transport facilities provided comply with the recommendations of the HKPSG. The master layout plan of the Proposed Development is shown in **Figure 3.1**.

Planned Road Works near the Proposed Development

3.4 The existing access road and unnamed road connecting the Proposed Development with Ng Lau Road is planned to be improved, to provide a 7.3m-wide road carriageway, a 2m-wide footpath and a 2m-wide cycle track (the “Planned Road Works”). The Planned Road Works to be implemented by the Owner as part of the Approved Scheme and is found in **Appendix C**.

Swept Path Analysis

3.5 The CAD-based swept path analysis programme, Autodesk Vehicle Tracking, was used to check the ease of manoeuvring of vehicles within the Proposed Development, and the swept path analysis drawings are found in **Appendix D**. Vehicles are found to have no manoeuvring problems.

4.0 TRAFFIC IMPACT

Design Year

- 4.1 The Proposed Development is expected to be completed in 2030, and the design year adopted for the traffic assessment is, whichever later of the 2: (i) at least 3 years after the planned completion of the development, i.e., 2033, or (ii) 5 years from the date of this application, i.e., 2028. Therefore, Year 2033 is adopted for junction capacity analysis.

Traffic Forecasting

- 4.2 Year 2033 peak hour traffic flows for the junction capacity analysis is produced (i) with reference to the 2019-based BDTM NTW1 (the “BDTM”); (ii) estimated growth from 2031 to 2033; (iii) expected traffic generation by the planned / committed developments in the vicinity; and (iv) expected traffic generation by the 2 cases, i.e., Approved Scheme and Proposed Development.

Modelling and Validation

- 4.3 The BDTM provides traffic forecasts for the years 2026 and 2031 and these have taken into account the planned developments, changes to the strategic road network, population growth, etc. Therefore, The BDTM is used as the basis to produce the traffic flow for this TIA.

- 4.4 The BDTM is validated, and the validation meets criteria found in the “BDTM Study”. Nevertheless, the traffic network and zone in the vicinity of the Proposed Development were further reviewed to ensure the traffic model is up-to-date and the modelled flow can be adopted. The modelling and validation methodology include, but not limited to, the following:

- The road links and junctions were checked and updated to ensure that any recent change in the existing road network is considered and missing road links or junction does not exist.
- The schedules of public transport services such as franchised bus and green/red minibus were also checked to ensure that the updated routings and headway information are adopted.
- The zone and centroid connectors were reviewed to ensure that the traffic zones generate/ attract traffic at appropriate locations.
- The traffic flows produced by BDTM at the surveyed junctions were reviewed with reference to the observed traffic flows.
- The validation methodology is same as that adopted in the BDTM. All count locations were reviewed and checked using the GEH statistic (a modified chi squared test to provide a statistic for both the magnitude of the difference and the percentage difference between modelled and observed flows). The GEH statistic is defined by:

$$\sqrt{\frac{(V_2 - V_1)^2}{\frac{1}{2}(V_2 + V_1)}}$$

where V_1 and V_2 are the observed and modelled flows.

- 4.5 The validation criteria adopted are found in **Table 4.1**.

TABLE 4.1 VALIDATION CRITERIA

Locations	Target
Traffic flows at all count locations	85% return a GEH statistic of 5 or less 100% return a GEH statistic of 10 or less

Estimated Traffic Growth Rate from 2031 to 2033

4.6 Reference is made to the: (i) the Annual Average Daily Traffic (“AADT”) of core stations located in the vicinity of the Proposed Development, which is found in the Annual Traffic Census, published by Transport Department, (ii) population and employment data for Tuen Mun from the “2019-based Territorial Population and Employment Data Matrix” (the “TPEDM”) prepared by Planning Department, and (iii) the Hong Kong Population Projection published by Census and Statistics Department.

4.7 The information for (i) is presented in **Table 4.2**.

TABLE 4.2 AADT OF THE CORE STATIONS IN THE VICINITY OF THE SUBJECT SITE

Station	6213	5647	Overall
Road	Castle Peak Road - Hung Shui Kiu	Tsing Lun Road	-
From	Tin Ha Road	Tsing Chung Koon Road	-
To	Lam Tei Interchange	Lam Tei Interchange	-
2010	31,280	10,770	42,050
2011	30,910	10,050	40,960
2012	31,210	9,990*	41,200
2013	30,520	10,070*	40,590
2014	33,510	9,970*	43,480
2015	31,720	10,390	42,110
2016	33,490	11,490	44,980
2017	34,140	11,310*	45,450
2018	32,740	11,590*	44,330
2019 [#]	33,220	11,500*	44,720
2020 [#]	34,710	12,870	47,580
2021 [#]	34,800	13,870	48,670
2022 [#]	34,500	13,450*	47,950
Average Annual Growth (2010-2018)	0.57%	0.92%	0.66%

Note: * Estimated by Growth Factor

Excluded due to the impact of the public events in 2019 and COVID-19 pandemic in 2020 – 2022.

4.8 **Table 4.2** shows that the annual average traffic growth of 0.66%.

4.9 Item (ii) has no population and employment data beyond year 2031, hence, there is no reference growth rate from 2031 to 2033. In addition, the major population growth near the Proposed Development, i.e., “Development at San Hing Road and Hong Po Road, Tuen Mun”, which will be completed in 2030 – 2033, have been included in the planned / committed developments, hence the traffic growth of the road network of concern is conservative.

4.10 The information for (iii) is presented in **Table 4.3**.

TABLE 4.3 HONG KONG POPULATION PROJECTIONS FROM CENSUS AND STATISTICS DEPARTMENT

Year	Population in Hong Kong (thousands)
2031	7,820.2
2033	7,903.6
Average Annual Growth (2031 – 2033)	0.53%

4.11 **Table 4.3** shows that the annual population growth between 2031 – 2033 is 0.53%. To be conservative, the annual growth rate of 1% is adopted for 2031 – 2033.

Additional Planned/ Committed Developments near the Subject Site

4.12 The planned/ committed developments near the Subject Site not included in the BDTM but have been incorporated to produce the future year traffic flows are listed in **Table 4.4** and the locations are presented in **Figure 4.1**.

Planned Road Improvement Works Nearby

4.13 The planned road improvement works at assessed junctions are presented below.

Development at San Hing Road and Hong Po Road

4.14 Some road improvement works are planned under various contracts by CEDD, and these are summarized in **Table 4.5**. The road improvement works are found in **Appendix E**.

TABLE 4.5 PLANNED ROAD IMPROVEMENT WORKS

Ref	Brief Description of the Improvement	Contract
J3	Provide 2 left-turn lanes at Ng Lau Road southbound	CE 39/2021 (CE)
	Provide 1 left-turn lane at Lam Tei Interchange eastbound	CE 39/2021 (CE)
J4	Provide exclusive left-turn lane from Hong Po Road southbound	CE 39/2021 (CE)
	Modify the entry lanes from Lam Tei Interchange westbound	CE 39/2021 (CE)
J6	Provide 2 right-turn lanes and 1 shared lane for right turn and straight ahead at Castle Peak Road – Lam Tei southbound	CE 39/2021 (CE)
J7	Provide a channelized island at Tsz Tin Road eastbound ()	CV/2019/04
J10	Widened to provide 2lane 2-way single carriageway at minor road	CE 39/2021 (CE)
J12	Provide signalised cross junction	CE 39/2021 (CE)

CE 39/2021 (CE) - Site Formation and Infrastructure Works for Public Housing Developments at San Hing Road and Hong Po Road, Tuen Mun and Choi Shun Street, Sheung Shui – Investigation, Design and Construction”

CV/2019/04 - Site Formation and Infrastructure Works near Tsz Tin Road and Hing Fu Street in Area 54, Tuen Mun

4.15 The improvement work described in **Table 4.5** will be completed gradually before 2030 – 2033, i.e., the intake of public housing of San Hing Road site, and San Hing Road site extension and Hong Po Road site (Note: These are items I, J and K in **Table 4.3**). These improvement works are adopted for the Year 2033 junction capacity analysis.

Hung Shiu Kiu New Development Area

4.16 Road improvement work is planned at Ng Lau Road / Castle Peak Road – Lam Tei (J11) under the “Hung Shui Kiu/Ha Tsuen New Development Area Package A Works for Second Phase Development - Design and Construction” (Agreement

No. CE 01/2020 (CE)) by Civil Engineering and Development Department (“CEDD”). The layout of road improvement at J11 is presented in **Appendix E**.

Net Increase in Traffic Generation between the Approved Scheme and the Proposed Development

- 4.17 To estimate the traffic generation of the Proposed Development, reference is made to the TPDM. However, the smallest flat size in the TPDM is 60m² GFA, which is substantially larger than the Proposed Development average flat size of only 32m² GFA. Hence, the estimated traffic generation is conservative, i.e., on the high-side. The adopted trip generation rates and the estimated AM and PM peak hour traffic generation are presented in **Table 4.6**.

TABLE 4.6 ADOPTED TRIP RATES AND TRAFFIC GENERATION FOR PROPOSED DEVELOPMENT

Proposed Development (1,385 flats with average flat about 32m ² GFA)	Parameter	AM Peak		PM Peak	
		Generation	Attraction	Generation	Attraction
Trip Rates: Residential Use with average 60m ² GFA	pcu/flat/hr	0.0718	0.0425	0.0286	0.0370
Traffic Generation	pcu/hr	<u>100</u>	<u>59</u>	<u>40</u>	<u>52</u>
		159 (2-way)		92 (2-way)	
	veh/hr ⁽¹⁾	<u>94</u>	<u>56</u>	<u>37</u>	<u>49</u>
		150 (2-way)		86 (2-way)	

⁽¹⁾ Converted from pcu/hr to veh/hr based on 90% private car/ taxi and 10% heavy goods vehicles

- 4.18 The traffic generation of Approved Scheme found in the approved traffic impact assessment is presented in **Table 4.7**.

TABLE 4.7 ADOPTED TRAFFIC GENERATION FOR APPROVED SCHEME

Approved Scheme	Parameter	AM Peak		PM Peak	
		Generation	Attraction	Generation	Attraction
Traffic Generation	pcu/hr	<u>37</u>	<u>22</u>	<u>18</u>	<u>23</u>
		<u>59 (2-way)</u>		<u>41 (2-way)</u>	
	veh/hr ⁽¹⁾	<u>35</u>	<u>21</u>	<u>17</u>	<u>22</u>
		56 (2-way)		39 (2-way)	

⁽¹⁾ Converted from pcu/hr to veh/hr based on 90% private car/ taxi and 10% heavy goods vehicles

- 4.19 The peak hour traffic generation of Approved Scheme and Proposed Development are shown in **Figures 4.2 – 4.3** respectively.
- 4.20 The net increase in traffic generation (in pcu/hr and veh/ hr) between the Approved Scheme and the Proposed Development is presented in **Tables 4.8 and 4.9**.

TABLE 4.8 NET INCREASE IN TRAFFIC GENERATION (PCU PER HOUR)

Scheme	Traffic Generation (pcu/ hr)			
	AM Peak		PM Peak	
	Generation	Attraction	Generation	Attraction
Proposed Development (from Table 4.6) [a]	100	59	40	52
Approved Scheme (from Table 4.7) [b]	37	22	18	23
Net Increase [a] – [b]:	+63	+37	+22	+29
	+100 (2-way)		+51 (2-way)	

TABLE 4.9 NET INCREASE IN TRAFFIC GENERATION (VEHICLE PER HOUR)

Scheme	Traffic Generation (veh/ hr)			
	AM Peak		PM Peak	
	Generation	Attraction	Generation	Attraction
Proposed Development (from Table 4.6) [a]	94	56	37	49
Approved Scheme (from Table 4.7) [b]	35	21	17	22
Net Increase [a] – [b]:	+59	+35	+20	+27
	+94 (2-way)		+47 (2-way)	

4.21 The Proposed Development is expected to generate 100 and 51 additional pcu / hour (2-way) in AM and PM peak respectively, or equivalent to 94 and 47 vehicles / hour (2-way).

Year 2033 Proposed Additional Bus Trips

4.22 It is expected that no more than 4 additional bus trips are required to accommodate the road-based public transport demand of the Proposed Development in Year 2033. The year 2033 proposed additional bus trips are shown in **Figure 4.4**, and details of the additional bus trips are presented in **Paragraph 5.24**.

Year 2033 Traffic Flows

4.23 Year 2033 traffic flows for the following cases are derived:

Year 2033 Without Proposed Development [A] = *Traffic flows derived with reference to 2031 NTW1 BDTM + estimated traffic growth between 2031 and 2033 + estimated traffic generation of the planned / committed developments after 2019*

Year 2033 With Approved Scheme [B] = *[A] + estimated traffic generation for Approved Scheme*

Year 2033 With Proposed Development [C] = *[A] + estimated traffic generation for Proposed Development + Additional Bus Trips*

4.24 Year 2033 peak hour junction flows and link flows for the above three cases are shown in **Figures 4.5 – 4.8** respectively.

Year 2033 Junction Capacity Analysis

4.25 Year 2033 junction capacity analysis for the three cases are summarised in **Table 4.10** and detailed calculations are found in the **Appendix A**.

TABLE 4.10 YEAR 2033 JUNCTION PERFORMANCE

Ref	Junction	Type of Junction (Parameter)	2033 Without Proposed Development		2033 With Approved Scheme		2033 With Proposed Development

Note: RC – reserve capacity; RA – Roundabout, DFC – design flow/capacity ratio

4.26 Table 4.10 shows that the Proposed Development has negligible traffic impact to the road junctions analysed.

Year 2033 Link Performance

4.27 The 2033 link performances are assessed and results are shown in Table 4.11.

TABLE 4.11 YEAR 2033 LINK CAPACITY ASSESSMENT

Ref	Link	Adjusted Design Flow (veh/hr)	Year 2033 Traffic Demand (veh/hr)								Year 2033 V/C Ratio

NB – northbound SB – southbound EB – eastbound WB – westbound

⁽²⁾ With reference to paragraph 2.4.1.2 and table 2.4.1.2, Chapter 2.4, Volume 2 of TPDM, the design flow is to be reduced when the expected proportion of heavy vehicles exceeds 15%. The table below presents the adjusted design flow based on the proportion of heavy vehicles (“HV%”).

Road Type	Design Flow (veh/hr)	Adjusted Design Flow (veh/hr)		
		0-15 HV%	15-20 HV%	20-25 HV%
		0% reduction	7% reduction	10% reduction
Expressway / trunk road (Dual 3 lanes – 11m-wide)	4,700	4,700	4,371	4,230
Primary Distributor (Dual 3 lanes – 7.3m-wide)	2,800	2,800	2,604	2,520
District Distributor (Single 4 lanes – 13.5m-wide)	1,900	1,900	1,767	1,710
Local Roads (Single 2 lanes)	800	800	744	720

- 4.28 The above results show that the assessed road links operate with sufficient capacity, except for Tuen Mun Road (L4), which operate with V/C ratios at 1.2 or above during the AM and PM peak hours in Year 2033. In view that there are negligible changes on the V/C ratios to L4 for cases without Proposed Development, with Approved Scheme and with Proposed Development, it can be concluded that the traffic generated by the Proposed Development is negligible.
- 4.29 As shown in LC paper no. CB(4)619/20-21(03) of Legislative Council Panel on Transport, the planned Route 11 would reduce v/c in Year 2036 from 1.2 to 1.0 at Tuen Mun Road (Siu Lam Section) in morning peak, which indicates the traffic congestion at Tuen Mun Road will be relieved by planned Route 11.
- 4.30 In addition to the above, other planned strategic road improvements, including, Tuen Mun Bypass and Yuen Long Highway (between Lam Tei and Tong Yan San Tsuen) are planned to be implemented. The traffic condition at L3 and L4 would be further improved by these planned strategic road improvements.
- 4.31 With the planned strategic road improvement works, both Yuen Long Highway (L3) and Tuen Mun Road (L4) are expected to operate with sufficient capacity.

5.0 IMPACT TO PUBLIC TRANSPORT SERVICES

Transport Mode of the Subject Site

5.1 The transport mode of the Subject Site is assessed with reference to “Travel Characteristic Survey 2011” (“TCS2011”), but adjusted to reflect the nearby public transport provisions. The public transport provisions near the subject site have the following characteristics:

- (1) Direct and comprehensive light rail services at Lam Tei LRT stops operating within 50m from the Subject Site, which serve as feeder services to MTR and within Tuen Mun, instead of GMB route 42 at Ng Lau Road.
- (2) Comprehensive bus services is identified within 400m walking distance.
- (3) There are no special purpose bus, tram and ferry nearby.

5.2 Based on the above public transport characteristics, special purposed bus, tram, ferry, and public light bus found in TCS2011 are converted to rail and bus mode on pro-rata basis. The modified transport mode adopted for the Proposed Development is compared with TCS2011 and is found in **Table 5.1**.

TABLE 5.1 MODIFIED TRANSPORT MODE FOR THE PROPOSED DEVELOPMENT

Transport Mode	TCS 2011	Modified Transport Mode adopted for the Proposed Development
Rail	30%	44%
Bus	27%	38%
Public Light Bus	13%	0%
Private Car	12%	12%
Special Purpose bus	9%	0%
Taxi	6%	6%
Tram	2%	0%
Ferry	1%	0%
Total	100%	100%

5.3 **Table 5.1** shows that 44% and 38% of mechanised trips from the Proposed Development would use MTR and bus respectively. For residents who use MTR, it is assumed that 100% would use the LRT service.

Estimated Peak Hour Mechanised Trip Generation of Proposed Development

5.4 The mechanised trip generation of the Approved Scheme and the Proposed Development is estimated with reference to TCS2011 and is presented in **Table 5.2**.

TABLE 5.2 ESTIMATED PEAK HOUR MECHANISED TRIP GENERATION OF THE PROPOSED DEVELOPMENT

Parameter	Calculation	Unit	Approved Scheme	Proposed Development
No. of Flats	A	flats	307	1,385
Average domestic household size in Tuen Mun ⁽¹⁾	B	persons/ flat	2.6	2.6
Population	C = BxA	persons	799	3,601
Average Daily Mechanised Trips ⁽²⁾	D	trips/ persons/ day	1.83	1.83
AM Peak hour factor of Daily Mechanised Trips ⁽³⁾	E	N/A	12%	12%
Estimated Peak Hour Mechanised Trip Generation	F = CxDxE	persons/ hr	176	791

⁽¹⁾ Extracted from Census and Statistic Department website

⁽²⁾ From Table 3.3, Travel Characteristics Survey 2011 Final Report

⁽³⁾ From Para. 3.3.7, Travel Characteristics Survey 2011 Final Report

Estimated AM Peak Hour Transport Demand

5.5 The AM peak hour transport demand of the Proposed Development is estimated based on the modified transport mode in **Table 5.1**, and are presented in **Table 5.3**.

TABLE 5.3 ESTIMATED PEAK HOUR TRANSPORT DEMAND

Transport Mode of Proposed Development		Ratio ⁽¹⁾	Estimated AM Peak Hour Transport Demand of Proposed Development (Passenger/hr)
Public Transport	Rail-based [a]	44%	348
	Road-based [b]	38%	301
	<i>Sub- total [c] = [a] + [b]</i>	<i>82%</i>	<i>649</i>
Private Car / Taxi [d]		18%	142
Total [e] = [c] + [d]		100%	791

⁽¹⁾ From Table 5.1

5.6 **Table 5.3** shows that Proposed Development is expected to generate additional public transport demand of 791 passengers per hour (2-way) during AM peak hour.

Road-Based Public Transport Demand Generated

5.7 The road-based public transport demand generated by the Proposed Development is summarised in **Table 5.4**.

TABLE 5.4 ESTIMATED ROAD-BASED PUBLIC TRANSPORT DEMAND

Development	Road-based Public Transport Demand (persons / hour)			
	AM Peak		PM Peak	
	Generation ⁽¹⁾	Attraction ⁽¹⁾	Generation ⁽¹⁾	Attraction ⁽¹⁾
Proposed Development: 1,385 Flats	214	87	87	148
	<i>301 (2-way)</i>		<i>235 (2-way)</i>	

⁽¹⁾ Proportional to adopted peak hours pedestrian generation and attraction rates in **Table 6.2**.

5.8 **Tables 5.4** shows that the Proposed Development is expected to generate road-based public transport demand of 301 and 235 passengers per hour (2-way) during AM and PM peak hours respectively.

Rail-Based Public Transport Demand Generated

5.9 The rail-based public transport demand generated by the Proposed Development are summarised in **Table 5.5**.

TABLE 5.5 ESTIMATED RAIL-BASED PUBLIC TRANSPORT DEMAND

Development	Rail-based Public Transport Demand (persons / hour)			
	AM Peak		PM Peak	
	Generation ⁽¹⁾	Attraction ⁽¹⁾	Generation ⁽¹⁾	Attraction ⁽¹⁾
Proposed Development: 1,385 Flats	247	101	100	172
	<i>+ 348 (2-way)</i>		<i>+ 272 (2-way)</i>	

⁽¹⁾ Proportional to adopted pedestrian generation and attraction rates in AM and PM peak

5.10 **Tables 5.5** shows that the Proposed Development is expected to generate rail-

based public transport demand of 348 and 272 passengers per hour (2-way) during AM and PM peak hours respectively.

Annual Public Transport Demand Growth Rate between 2024 – 2033

5.11 To establish the local public transport demand growth rate from 2024 to 2033, reference is made to several sources of information including:

Between 2024 – 2031: “2019 - based TPEDM”

Between 2031 – 2033: “Hong Kong Population Projections” from the Census and Statistics Department

5.12 Relevant information from the 2019-based TPEDM is presented in **Table 5.6**.

TABLE 5.6 TUEN MUN NEW TOWN POPULATION PROJECTIONS

Year	Population [a]	Employment [b]	Overall [c] = [a] + [b]
2019	476,500	130,800	607,300
2031	606,850	150,750	757,600
Average Annual Growth 2019 to 2031	2.0%	1.2%	1.9%

5.13 **Table 5.6** shows that the average annual population growth in the Tuen Mun between 2019 and 2031 is 1.9%.

5.14 Relevant information from the “Hong Kong Population Projections” is presented in **Table 5.7**.

TABLE 5.7 HONG KONG POPULATION PROJECTIONS FROM CENSUS AND STATISTICS DEPARTMENT

Year	Hong Kong Resident Population ('000)
2031	7,820.2
2033	7,903.6
Average Annual Growth 2031 to 2033	0.53%

5.15 **Table 5.7** shows that the average annual population growth in Hong Kong between 2031 – 2033 is 0.53%.

5.16 Based on the above, the annual growth factors adopted are 1.9% from 2024 to 2031, and 1.0% from 2031 to 2033.

2033 Road-Based Public Transport Occupancies

5.17 The destination of bus routes with stops at Castle Peak Road – Lam Tei (“CPR”) and the Lam Tei Interchange (“LTI”) are presented in **Table 5.8**.

TABLE 5.8 COMPARISON ON DESTINATION OF BUS ROUTES BETWEEN
BUS STOP AT CPR AND LTI

Bus Stop	Walking Distance (Time)	No. of Bus Routes at Destination							
		HKI	NTW	YTM	Kln(E)	Kln(W)	N	TCL	BCP
CPR	100 to 200 (2 - 4 mins)	4	3	2	2	0	1	2	1
LTI	350 to 400 (7 - 8 mins)	3	2	2	2	1	2	2	1

HKI – Hong Kong Island

NTW – New Territories West

YTM – Yau Ma Tei/Tsim Sha Tsui/Mong Kok

Kln(E) – Kowloon (East)

Kln(W) – Kowloon (West)

N – North

BCP – Boundary Control Point

TCL – Tung Chung / Lantau Island

5.18 **Table 5.8** shows that the bus stop at CPR is located only 2 – 4 minutes’ walk away, and has similar routes as the LTI stop, except for the routes to Kowloon West.

5.19 However, it is found that most of the bus routes at CPR are operated by KMB, and residents from the Proposed Development travelling to Kowloon West using these bus routes could change to other bus routes operated by KMB at the Tuen Mun Road interchange, e.g. KMB 59X, 60X and 67X. Therefore, it is concluded that all road-based public transport demand from the Proposed Development would use CPR, and there is negligible usage of LTI, due to its longer walking distance.

5.20 To estimate the Proposed Development passenger demand for each bus route at CPR, reference is made to the existing boarding and alighting demand of buses at CPR bus stops. The passenger demand at CPR and the estimated passenger demand for the Proposed Development of each bus route at CPR are presented in **Table 5.9**.

TABLE 5.9 THE PROPOSED DEVELOPMENT PASSENGER DEMAND AND
ESTIMATED PASSENGER DEMAND FOR EACH BUS ROUTE AT CPR BUS
STOPS

Bus Route at CPR Bus stops	Existing Passenger Demand (passenger/hr)				Estimated Passenger Demand for the Proposed Development (passenger/hr)			
	AM Peak		PM Peak		AM Peak		PM Peak	
	Outward bound (Boarding)	Inward bound (Alighting)	Outward bound (Boarding)	Inward bound (Alighting)	Outward bound (Boarding)	Inward bound (Alighting)	Outward bound (Boarding)	Inward bound (Alighting)
KMB 53	2	4	1	0	2	4	2	0
KMB 63X	60	18	16	38	53	14	27	23
KMB 68A	34	12	18	115	30	10	30	71
KMB 258A	31	-	-	-	28	0	0	0
KMB 258P	12	-	-	24	11	0	0	15
KMB 261P	4	-	-	-	4	0	0	0
KMB 960A	-	-	-	10	-	-	-	7
KMB 960P	53	-	-	24	47	0	0	15
KMB 960X	22	-	-	3	20	0	0	2
LWB A34	11	-	1	9	10	0	2	6
NLB B2	9	74	15	14	9	59	26	9
Total	238	108	51	237	214	87	87	148

5.21 Based on the Proposed Development estimated passenger demand for each bus route at CPR bus stop in **Table 5.9**, the year 2033 performance of road-based

public transport services is derived as follows:

2033 without Proposed Development [A] = 2024 Observed Performance of at CPR Bus Stop + adopted public transport demand growth demand growth from 2024 to 2033

2033 with Proposed Development [B] = [A] + Estimated Passenger Demand for the Proposed Development of Each Bus Route at CPR Bus Stops (from Table 5.9)

5.22 Year 2033 performance of road-based public transport services at CPR bus stop are presented in Table 5.10.

TABLE 5.10 YEAR 2033 PERFORMANCE OF ROAD-BASED PUBLIC TRANSPORT SERVICES AT CPR BUS STOPS

Bus Route at CPR	Outward bound					Inward bound				
	Capacity	without Proposed Development		with Proposed Development		Capacity	without Proposed Development		with Proposed Development

NLB B2	360	233	65%	259	72%	360	158	44%	167	46%
Total	1,440	566	39%	653	45%	2,880	1,343	47%	1,491	52%

Note: (1) Occ. – Occupancy
(2) Capacity and occupied are in passenger/hr

5.23 Table 5.10 shows that the year 2033 road-based public transport services at CPR stop would operate with sufficient capacities during the AM and PM peak hours for the cases without and with Proposed Development, except for (i) KMB 68A outward bound in AM peak and inward bound in PM peak, and (ii) KMB 63X inward bound in PM peak.

Proposed Additional Bus Trips

- 5.24 Based on the findings from **Table 5.10**, additional bus trips are proposed for the bus routes shown in **Figure 5.1**:
- KMB 68A outward bound in AM peak;
 - KMB 68A inward bound in PM peak; and
 - KMB 63X inward bound in PM peak.
- 5.25 With the proposed additional bus trips, the capacity of KMB 68A outward bound in AM peak would increase from 360 to 480, hence, the occupancy would decrease from 79% to 59% (calculation: $283 \div 480 = 59\%$), which is acceptable.
- 5.26 With the proposed additional bus trips, the capacity of KMB 68A inward bound in PM peak would increase from 600 to 720, hence, the occupancy would decrease from 80% to 67% (calculation: $479 \div 720 = 67\%$), which is acceptable.
- 5.27 With the proposed additional bus trips, the capacity of KMB 63X inward bound in PM peak would increase from 240 to 360, hence, the occupancy would decrease from 97% to 65% (calculation: $233 \div 360 = 65\%$), which is acceptable.

2033 Rail-Based Public Transport Occupancies

- 5.28 As presented in **Table 5.5**, the demand on rail-based public transport services, i.e. MTR Tuen Ma Line, associated with the Proposed Development is no more than 247 passengers during the peak hours. As presented in **Table 2.5**, the MTR Tuen Ma Line has a maximum carrying capacity of 70,000 passenger / hour. Hence, the additional passenger demand is only 0.4% of the maximum carrying capacity [Calculation: $247 \div 70,000 = 0.4\%$], which is negligible on the MTR Tuen Ma Line.

2033 LRT Service Occupancies

- 5.29 Based on survey result shown in **Table 2.7**, the year 2033 performance of LRT services at Lam Tei Stop were derived as follows:

2033 without Proposed Development [A] = 2024 observed performance of LRT services at Lam Tei Stop + adopted public transport demand growth demand growth from 2024 to 2033

2033 with Proposed Development [B] = [A] + rail-based public transport demand due to Proposed Development (from **Table 5.5**)

- 5.30 Year 2033 performances of LRT services at Lam Tei Stop are presented in **Table 5.11**.

TABLE 5.11 YEAR 2033 PERFORMANCE OF LRT SERVICES AT LAM TEI STOP

Direction	No. of Passenger			Occupancy [c] = [b]/[a]	
	Capacity ⁽¹⁾ [a]	Year 2033 Occupied [b]		Without Proposed Development	With Proposed Development
		Without Proposed Development	With Proposed Development		
AM Peak					
Yuen Long bound	6,600	3,829	3,866	58%	59%
Tuen Mun bound	7,200	6,746	6,956	94%	97%
PM Peak					
Yuen Long bound	5,600	4,930	5,050	88%	90%
Tuen Mun bound	6,400	3,599	3,651	56%	57%

5.31 **Table 5.11** shows that the year 2033 LRT services at Lam Tei Stop would operate with limited capacities during the AM and PM peak hours. Although the estimated occupancy of the light rail services Tuen Mun bound would reach 97% in AM peak and Yuen Long bound would reach 90% in PM peak at Lam Tei LRT Stop in Year 2033, some measures could be adopted relieve the occupancy, including:

1. (1) The planned Hung Shui Kiu MTR Station of Tuen Ma Line will be completed in Year 2030; and (2) Hung Shui Kiu New Development Area (“HSKNDA”) will provide (i) Smart and Green Transit System”, and (ii) pedestrian network connecting to Hung Shui Kui and Tin Shui Wai MTR Stations.

With the above planned public transport facilities, feeder service passenger demand to Siu Hong MTR Station in HSKNDA (including Nai Wai, Chung Uk Tsuen and Hung Shui Kiu LRT stops, is expected to be diverted. Hence, the occupancies of the LR services (both Tuen Mun and Yuen Long bound) are expected to reduce.

Based on the on-site observation at Siu Hong LRT stop, over 50% of the existing LRT (Tuen Mun bound) passengers would interchange at the Siu Hong Station, to switch to the Tuen Ma Line, and vice versa to Yuen Long bound. In view that the planned Hung Shui Kiu Station is located to the north of the LRT service, it is assumed that 25% of total occupancy will be diverted to the planned Hung Shui Kiu MTR Station. As a result, the year 2033 LRT (Tuen Mun bound) occupancy at Lam Tei LRT Stop is expected to reduce from 97% to 74% (calculation: $97\% \times (100\% - 25\%)$). For Yuen Long bound, the year 2033 LRT occupancy at Lam Tei LRT Stop is expected to reduce from 90% to 68% (calculation: $90\% \times (100\% - 25\%)$).

2. Year 2024 of LRT occupancy survey at the Lam Tei LRT stop found that 10 out of 24 Tuen Mun bound LRT trips have occupancies which are less than 80% (Appendix B in revised TIA refers). In addition, it is observed that the busiest period occurred between 0730 and 0800 hours, additional trips could be considered in conjunction with the actual passenger demand.

It is noted that at present two scheduled 751P (from Tin Yat to Siu Hong) trips are operated during the AM peak. To further enhance the capacity at the LRT

Lam Tei LRT Stop (Tuen Mun bound) in the AM peak, additional special departure of LRT route 751P, i.e., from Tin Yat to Siu Hong, could be considered. Hence, the LRT (Tuen Mun bound) passenger demand of the Proposed Development could be accommodated.

- 5.32 In view that the Proposed Development is a small-scale development, the passenger demand generated would have negligible impact to the occupancy of the LRT service, hence, the Proposed Development is considered acceptable.

Review on Public Transport Facilities

- 5.33 Public Transport Facilities are reviewed and presented in below paragraphs.

Additional Queuing/Waiting Demand due to the Proposed Development

- 5.34 The estimated additional queuing/waiting related to the Proposed Development at each bus stop / LRT station is presented in **Table 5.12**.

TABLE 5.12 ADDITIONAL QUEUING / WAITING DEMAND RELATED TO THE PROPOSED DEVELOPMENT

Bus Stop / LRT Stop		Boarding Demand (No. of Passenger) [a]	No. of Trips ⁽¹⁾ [b]	Average Queuing / Waiting Passenger (No. of Passenger) [c] = [a] / [b]
CPR – Southbound (from Table 5.9)	KMB 53	2	2	1
	KMB 63X	53	5	11
	KMB 68A	30	4	8
	KMB 258A	28	2	14
	KMB 258P	11	4	3
	KMB 960P	47	6	8
	KMB 960X	20	7	3
	LWB A34	10	3	4
	NLB B2	9	3	3
	Sub-total	210	36	55
CPR – Northbound (from Table 5.9)	KMB 261P	4	1	4
LTI – Westbound		0	0	0
LTI – Eastbound		0	0	0
Lam Tei LRT Stop – Yuen Long bound		38	23	2
Lam Tei LRT Stop – Tuen Mun bound		210	24	9

⁽¹⁾ included additional bus trips in **paragraph 5.24**

- 5.35 **Table 5.12** shows that the estimated additional average queuing /waiting passenger at CPR southbound and CPR northbound bus stops are **55** and **4** passengers respectively and no additional average queuing /waiting passenger at LTI bus stops.

Utilisation of Passenger Waiting/Queuing Areas at Bus Stops / LRT Platforms

- 5.36 Survey on passenger waiting/queuing areas at bus stops / LRT platforms was conducted during the AM and PM peak periods on Thursday, 8th May 2024, and the peak hours identified from the surveys is found to be between 0715 – 0815 hours. Based on this survey, the year 2033 maximum number of passenger waiting/queuing at the Bus Stops / LRT platforms were derived as follows:

2033 without Proposed Development [A] = 2024 observed maximum queue + adopted passenger demand growth from 2024 to 2033

2033 with Proposed Development [B] = [A] + average queuing / waiting passenger due to Proposed Development (from [Table 5.12](#))

5.37 Utilisations of passenger waiting/queuing area at the bus stops / LRT platforms for existing, 2033 cases without and with Proposed Development are presented in [Table 5.13](#).

TABLE 5.13 UTILISATIONS OF PASSENGER WAITING / QUEUING AREA AT BUS STOPS AND LRT PLATFORMS

Bus Stop / LRT Platform	Queuing/ Waiting Capacity		Existing		Year 2033 Without Proposed Development		Year 2033 With Proposed Development	
	Area (m ²)	Pass ⁽¹⁾ [a]	Max Queue [b]	Util [c] = [b] / [a]	Max Queue [d]	Util [e] = [d] / [a]	Max Queue [f]	Util [g] = [f] / [a]
CPR – Southbound	38	132	38	29%	45	34%	100	76%
CPR – Northbound	20	69	10	14%	12	17%	16	23%
LTI – Westbound	8	28	8	29%	10	36%	10	36%
LTI – Eastbound	8	28	0	0%	0	0%	0	0%
Lam Tei LRT Stop – Yuen Long bound	30 ⁽²⁾	104	16	15%	19	18%	21	20%
Lam Tei LRT Stop – Tuen Mun bound	96 ⁽²⁾⁽³⁾	333	84	25%	98	29%	107	32%

Pass – Passenger

Max – Maximum

Util - Utilisation

⁽¹⁾ Refer to Volume 9, Chapter 2.7, TPDM, standing capacity of 5 passengers per 1.44m² is adopted.

⁽²⁾ Deducted minimum of 1.1m walkways from doors of light rail vehicles to the exit of the platforms and utilities on the platforms, e.g. shelter, seats, ticket vending machines and Octopus card readers.

⁽³⁾ Included the expansion of Lam Tei LRT Tuen Mun bound platform

5.38 [Table 5.13](#) shows that the assessed bus stops /LRT platforms would have sufficient passenger waiting/queuing areas for the case of year 2033 with the Proposed Development.

Length of the Laybys for Bus Stops

5.39 The assessment on length of the laybys at the Castle Peak Road – Lam Tei bus stops and Lam Tei Interchange bus stops for the year 2033 without and with Proposed Development are presented in [Table 5.14](#).

TABLE 5.14 ASSESSMENT ON LENGTH OF THE LAYBYS FOR BUS STOPS

Bus Stop	Number of Bus Could Stop (Length) [c]	Average Dwell Time (minute) [a]		Number of Bus Arrival for Boarding /Alighting [b]				Utilisation of Bus Stop Layby [d]= [a]x[b] / ([c]x60 minutes)			
				2033 Without Proposed Development ⁽¹⁾		2033 With Proposed Development		2033 Without Proposed Development		2033 With Proposed Development	
		AM Peak	PM Peak	AM Peak	PM Peak	AM Peak	PM Peak	AM Peak	PM Peak	AM Peak	PM Peak
CPR – Southbound	2 (26m)	1.6	0.9	35	10	36 ⁽²⁾	10	47%	8%	48%	8%
CPR – Northbound	1 (13m)	1.2	1.3	10	21	10	23 ⁽²⁾	20%	47%	20%	50%
LTI – Westbound	1 (13m)	0.5	0.5	3	4	3	4	3%	3%	3%	3%
LTI – Eastbound	1 (13m)	0.7	0.5	7	2	7	2	8%	2%	8%	2%

⁽¹⁾ Refer to Paragraph 5.11, all bus services provided in Year 2033 remain the same as observed from surveys conducted in 2024

⁽²⁾ Additional bus trips related to the Proposed Development are included in Year 2033 with Proposed Development scenario.

5.40 **Table 5.14** shows that:

- CPR Southbound bus stop layby: The utilisation increases from 47 to 48% in AM peak, taking into consideration the Proposed Development. Hence, the Proposed Development has negligible impact.
- CPR northbound bus stop layby: The utilisation increases from 47 to 50% in PM peak, taking into consideration the Proposed Development. The Proposed Development has minimal impact.
- LTI bus stop westbound and eastbound laybys: The utilisation remains the same for the case with the Proposed Development. Hence, there is no impact from the Proposed Development.

Justification on Not Providing Shuttle Bus Service for the Proposed Development

5.41 The assessment on the impact of public transport concluded that the public transport provisions in the vicinity of the Proposed Development are sufficient to accommodate the passenger demand due to the Proposed Development by providing 4 additional bus services. Hence, provision of shuttle bus services for the Proposed Development is not required.

6.0 PEDESTRIAN IMPACT

2033 Pedestrian Flow Forecasting

- 6.1 2033 peak hour pedestrian flows are produced by estimating (i) the pedestrian growth from 2024 to 2033; and (ii) expected pedestrian generated by the Proposed Development and planned / committed developments in the vicinity.

Annual Pedestrian Growth Rate between 2024 – 2033

- 6.2 Growth rates of 1.9% per annum from 2024 to 2031, and 1% per annum for the period from 2031 to 2033, are adopted, and references to these are found in Paragraphs 5.20 – 5.26.

Peak Hour Pedestrian Generated by Planned / Committed Developments in the Vicinity

- 6.3 Peak hour pedestrian generated by planned / committed developments in the vicinity as presented in Table 4.3 is included in the Year 2033 pedestrian flow.

Adopted Pedestrian Generation Rate

- 6.4 Pedestrian generation survey was conducted at 0700 – 0900 and 1800 – 2000 hours on Thursday, 12th September 2024 at developments found near the Proposed Development. The AM and PM peak hours identified from the surveys are found to be between 0715 – 0815 hours and 1830 – 1930 hours respectively. The pedestrian generation and pedestrian generation rates is shown in Table 6.1.

TABLE 6.1 PEDESTRIAN GENERATION AND PEDESTRIAN GENERATION RATES

Surveyed Developments (Number of Flat)	AM Peak		PM Peak	
	Generation	Attraction	Generation	Attraction
Pedestrian Generation (Ped / hr)				
Novoland (3,282) ⁽¹⁾	1,491	568	542	1,346
Ching Tin Estate (5,183)	3,214	1,436	1,270	2,379
Yan Tin Estate (4,688)	3,085	1,262	1,248	2,143
Pedestrian Generation Rate (Ped / hr / flat)				
Novoland (3,282) ⁽¹⁾	0.4543	0.1731	0.1651	0.4101
Ching Tin Estate (5,183)	0.6201	0.2771	0.2450	0.459
Yan Tin Estate (4,688)	0.6581	0.2692	0.2662	0.4571
Adopted Pedestrian Generation Rate (% 2-way)	0.6581 (71%)	0.2692 (29%)	0.2662 (37%)	0.4571 (63%)
	0.9273 (2-way)		0.7233 (2-way)	

GEN – Generation ATT – Attraction

⁽¹⁾ As of the time of survey, only phases 1 and 2 of the development are occupied.

- 6.5 Table 6.1 shows that the adopted AM and PM peak hour pedestrian generation rate are 0.9273 and 0.7233 ped/flat/hour (2-way).

Peak hour Pedestrian Generation of the Proposed Development

- 6.6 Based on the adopted pedestrian generation rates shown in Table 6.1, the peak hour pedestrian generation of the Proposed Development are calculated and are presented in Table 6.2.

TABLE 6.2 PEDESTRIAN GENERATION OF PROPOSED DEVELOPMENT

Item	Pedestrian Generation (Ped/ hour)			
	AM Peak		PM Peak	
	Generation	Attraction	Generation	Attraction
The Proposed Development (1,385 Flats)	911	373	369	633
	1,284 (2-way)		1,002 (2-way)	

6.7 **Tables 6.2** shows that Proposed Development would generate 1,284 and 1,002 persons (2-way) during AM and PM peak hour respectively.

Year 2033 Pedestrian Flows

6.8 Year 2033 pedestrian flows are produced with reference to (i) the observed 2024 pedestrian flows, (ii) annual pedestrian growth rate between 2024 – 2033, (iii) expected pedestrian generation due to the planned / committed developments between 2024 – 2033 and the Subject Site.

6.9 Year 2033 pedestrian flows for the footpath analysis were derived as follows:

2033 without Proposed Development [A] = 2024 observed pedestrian flows + Adopted pedestrian growth from 2024 to 2033 + estimated pedestrian due to the planned / committed developments

2033 with Proposed Development [B] = [A] + pedestrian generation due to Proposed Development

Year 2033 LOS Analysis

6.10 Year 2033 peak hour pedestrian flows for the two cases are estimated and presented in **Figure 6.1** and the corresponding LOS assessment is presented in **Table 6.3**.

TABLE 6.3 YEAR 2033 LOS ASSESSMENT

Location	Clear Width ⁽¹⁾ [Effective Width] (m)	Peak Period	2033 without Proposed Development			2033 with Proposed Development		
			Flow (ped/hour)	Flow rate (ped/min/m)	LOS	Flow (ped/hour)	Flow rate (ped/min/m)	LOS
P1. Footpath on the footbridge accessing to Ng Lau Road	2.0[1.0]	AM	327	5.5	A	456	7.6	A
		PM	235	3.9	A	336	5.6	A
P2. Footpath between Lam Tei LRT stop and bus stop at Castle Peak Road – Lam Tei	2.5[1.5]	AM	443	4.9	A	700	7.8	A
		PM	305	3.4	A	1,007	11.2	A
P3. Footbridge over Castle Peak Road – Lam Tei	2.5[1.5]	AM	328	3.6	A	1,227	13.6	A
		PM	183	2.0	A	384	4.3	A
P4. Southern Footpath of San Hing Road	2.5[1.5]	AM	129	1.4	A	194	2.2	A
		PM	95	1.1	A	146	1.6	A
P5. Eastern Footpath of Ng Lau Road	2.0[1.0]	AM	296	4.9	A	361	6.0	A
		PM	200	3.3	A	251	4.2	A

Note: ⁽¹⁾ The width excludes railing and obstructions.

6.11 **Table 6.3** shows that the assessed footpaths operate with LOS A, i.e., have sufficient capacity to accommodate the expected pedestrian growth and pedestrian generated due to Proposed Development.

7.0 SUMMARY

- 7.1 The Subject Site is located in D.D.130, Lam Tei, Tuen Mun. At present, the Subject Site is unoccupied, and access to the Subject Site is via an existing unnamed road which is connected to Ng Lau Road.
- 7.2 Manual classified counts were conducted at junctions and road links which are located in the vicinity in order to establish the existing traffic flows during AM Peak and PM peak hours.
- 7.3 The internal transport facilities provided comply with recommendations of the HKPSG and comments from Transport Department.
- 7.4 Year 2033 peak hour traffic flows for the junction capacity analysis is produced (i) with reference to the BDTM; (ii) estimated growth from 2031 to 2033; (iii) expected traffic generation by the planned / committed developments in the vicinity; and (iv) expected traffic generation by the 2 cases, i.e., Approved Scheme and Proposed Development.
- 7.5 Compared to the Approved Scheme, the Proposed Development will generate only 100 and 51 additional pcu (2-way) in AM peak and PM peak respectively. In addition, 4 nos. of bus trips are proposed to accommodate the road-based public transport demand of the Proposed Development.
- 7.6 The assessment of the nearby public transport services found that the Proposed Development has negligible impact. The assessment of footpaths found that the Proposed Development has negligible impact.
- 7.7 The existing access road and unnamed road connecting the Proposed Development with Ng Lau Road is planned to be improved, to provide a 7.3m-wide road carriageway, a 2m-wide footpath and a 2m-wide cycle track.
- 7.8 This TIA concluded that the Proposed Development has no adverse traffic impact and the Proposed Development is acceptable from traffic engineering terms.

Appendix A – Junction Capacity Analysis

Priority Junction Analysis

Junction:	Unnamed Road / Access Road		
Design Year:	2023	Job Number: J7265	Date: 15 Nov 2024
Scenario:	Existing Condition		P. 1

The predictive equations of capacity of movement are:

$$Q-BA = D[627 + 14W-CR - Y(0.364q-AC + 0.144q-AB + 0.229q-CA + 0.52q-CB)]$$

$$Q-BC = E[745 - Y(0.364q-AC + 0.144q-AB)]$$

$$Q-CB = F[745 - 0.364Y(q-AC + q-AB)]$$

The geometric parameters represented by D, E, F are:

$$D = [1 + 0.094(w-BA - 3.65)][1 + 0.0009(V-rBA - 120)][1 + 0.0006(V-lBA - 150)]$$

$$E = [1 + 0.094(w-BC - 3.65)][1 + 0.0009(V-rBC - 120)]$$

$$F = [1 + 0.094(w-CB - 3.65)][1 + 0.0009(V-rCB - 120)]$$

where $Y = 1 - 0.0345W$

q-AB, etc = the design flow of movement AB, etc

W = major road width

W-CR = central reserve width

w-BA, etc = lane width to vehicle

v-rBA, etc = visibility to the right for waiting vehicles in stream BA, etc

v-lBA, etc = visibility to the left for waiting vehicles in stream BA, etc

Priority Junction Analysis

Junction:	Hong Po Road / Yan Tin Estate Access Road		
Design Year:	2023	Job Number:	J7265
Scenario:	Existing Condition	Date:	15 Nov 2024
			P. 45

The predictive equations of capacity of movement are:

$$Q\text{-BA} = D[627 + 14W\text{-CR} - Y(0.364q\text{-AC} + 0.144q\text{-AB} + 0.229q\text{-CA} + 0.52q\text{-CB})]$$

$$Q\text{-BC} = E[745 - Y(0.364q\text{-AC} + 0.144q\text{-AB})]$$

$$Q\text{-CB} = F[745 - 0.364Y(q\text{-AC} + q\text{-AB})]$$

The geometric parameters represented by D, E, F are:

$$D = [1 + 0.094(w\text{-BA} - 3.65)][1 + 0.0009(V\text{-rBA} - 120)][1 + 0.0006(V\text{-IBA} - 150)]$$

$$E = [1 + 0.094(w\text{-BC} - 3.65)][1 + 0.0009(V\text{-rBC} - 120)]$$

$$F = [1 + 0.094(w\text{-CB} - 3.65)][1 + 0.0009(V\text{-rCB} - 120)]$$

where $Y = 1 - 0.0345W$

q-AB, etc = the design flow of movement AB, etc

W = major road width

W-CR = central reserve width

w-BA, etc = lane width to vehicle

v-rBA, etc = visibility to the right for waiting vehicles in stream BA, etc

v-IBA, etc = visibility to the left for waiting vehicles in stream BA, etc

Geometry :	Input		Input		Input		Calculated	
	W	9.50	V-rBA	55	w-BA	4.40	D	0.9323

Planned Road Improvement Scheme at J7 - Junction of Tsing Lun Road / Tsz Tin Road

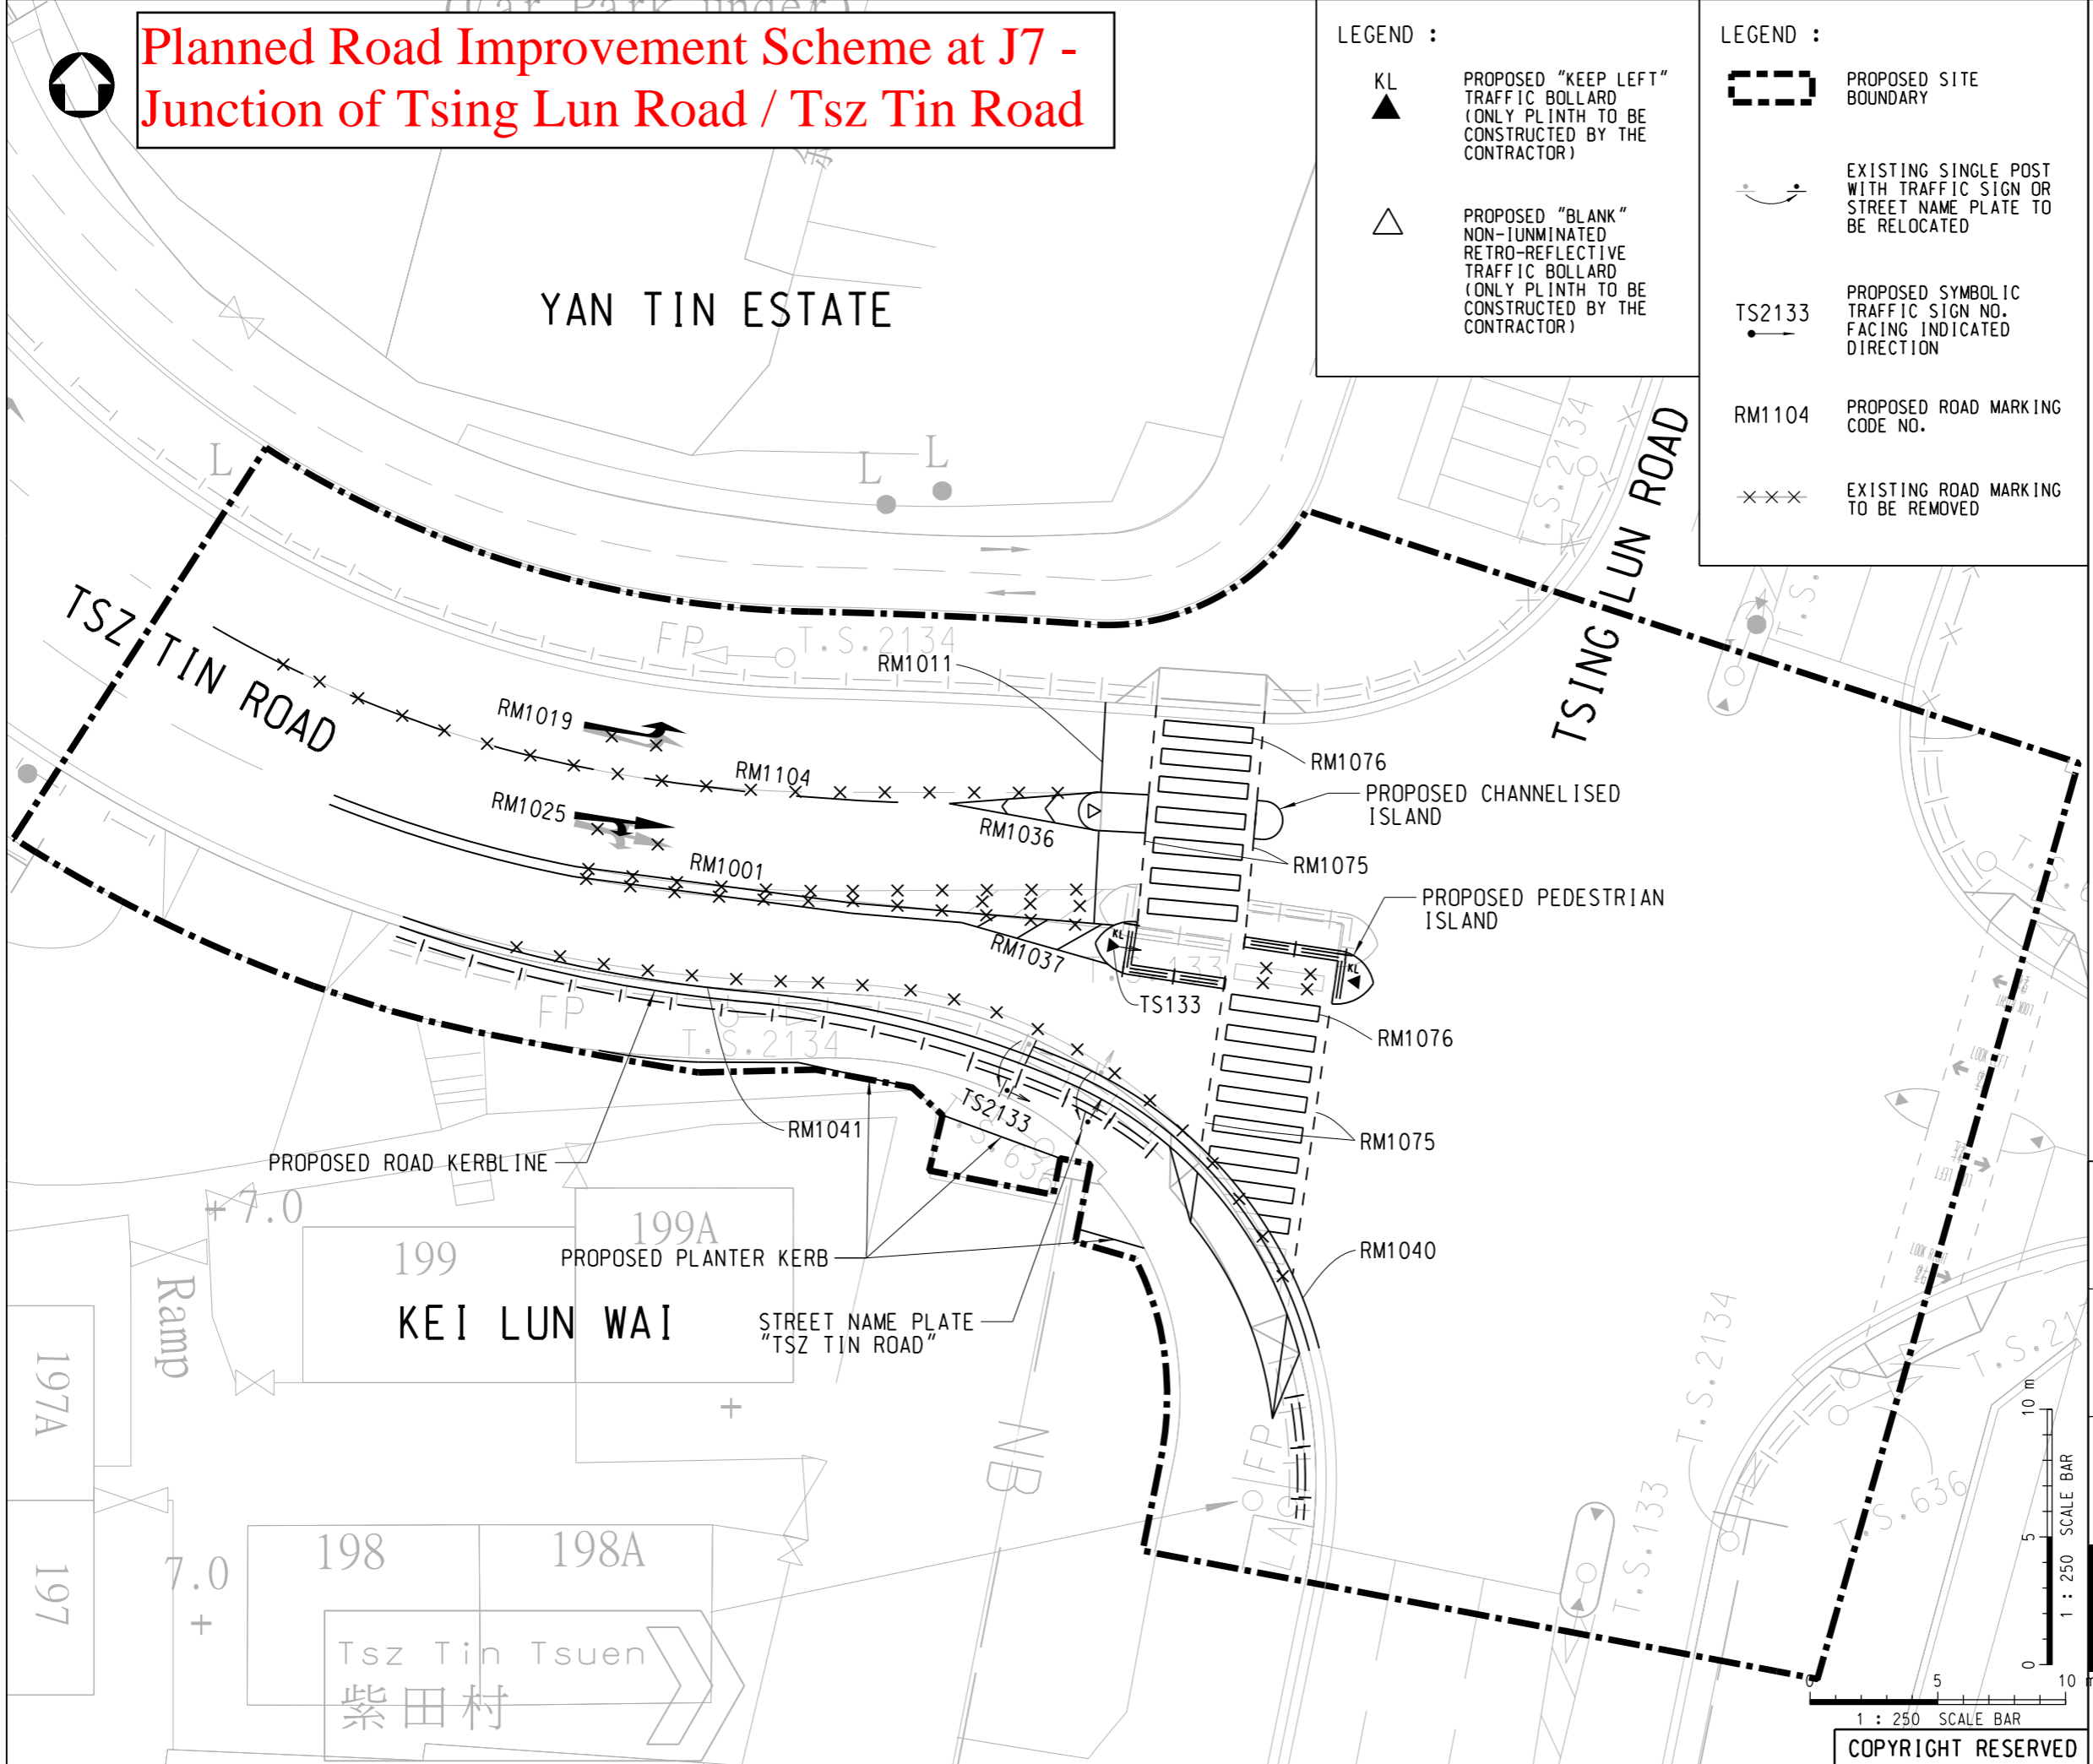

LEGEND :

- ▲ PROPOSED "KEEP LEFT" TRAFFIC BOLLARD (ONLY PLINTH TO BE CONSTRUCTED BY THE CONTRACTOR)
- △ PROPOSED "BLANK" NON-ILLUMINATED RETRO-REFLECTIVE TRAFFIC BOLLARD (ONLY PLINTH TO BE CONSTRUCTED BY THE CONTRACTOR)

LEGEND :

- PROPOSED SITE BOUNDARY
- ⌒ EXISTING SINGLE POST WITH TRAFFIC SIGN OR STREET NAME PLATE TO BE RELOCATED
- TS2133 PROPOSED SYMBOLIC TRAFFIC SIGN NO. FACING INDICATED DIRECTION
- RM1104 PROPOSED ROAD MARKING CODE NO.
- xxx EXISTING ROAD MARKING TO BE REMOVED

- NOTES :**
1. ALL DIMENSIONS ARE IN MILLIMETRES UNLESS OTHERWISE STATED.
 2. GRID LINES ARE IN HONG KONG METRIC GRID 1980.
 3. ALL LEVELS ARE IN METRES ABOVE PRINCIPAL DATUM (mPD).
 4. THIS DRAWING SHALL BE READ IN CONJUNCTION WITH DRAWING NO. LWSK-J5-0010.
 5. DETAILS OF CONCRETE PLINTH FOR TRAFFIC BOLLARD SHALL REFER TO HyD STANDARD DRAWING NOS. H2140 TO H2141.
 6. FOR DETAILS OF TRAFFIC SIGNS AND ROAD MARKING, REFER TO VOLUME 3 OF TRANSPORT PLANNING AND DESIGN MANUAL (TPDM) PUBLISHED BY TRANSPORT DEPARTMENT.
 7. FOR SUPPORT DETAILS OF SINGLE POST TRAFFIC SIGNS INCLUDING COLOR OF POST, REFER TO HyD STANDARD DRAWING NOS. H2147 TO H2148.
 8. BACK OF ALL SIGNS SHALL BE PAINTED IN GREY TO BS5252F CODE 18B19.
 9. EXISTING ROAD MARKING TO BE AFFECTED SHALL BE REMOVED AND REPLACED BY PROPOSED ROAD MARKING.
 10. NEW SUPPORTS, INCLUDING SINGLE/MULTIPLE POSTS AND FRAME SUPPORTS, SHALL BE CONSTRUCTED FOR ALL PROPOSED AND RELOCATED TRAFFIC OR DIRECTIONAL SIGNS.
