Subject: Representation Relating to Plan No. S/H10/22 (Support Item A)

Submission Number:
TPB/R/S/H10/22- S213

Representation Number:
TPB/R/S/H10/22- R101

To: Town Planning Board Secretariat (tpbpd@pland.gov.hk)

I am writing in support of Item A, draft Pok Fu Lam Outline Zoning Plan No. S/H10/22 as gazetted on March 22, 2024 under section 5 of Town Planning Ordinance.

Item A – Rezoning of a site between Pok Fu Lam Road and Victoria Road from “Green Belt” (“GB”), “Residential (Group C)6” and area shown as ‘Road’ to “Other Specified Uses” annotated “Global Innovation Centre” (“OU(Global Innovation Centre)”).

My reasons are as follows:

["The Global Innovation Centre's location in Pokfulam, with proximity to the Sassoon Road Campus, Queen Mary Hospital, and Cyberport, will create a synergy with HKU's existing campuses, forming an "Island Innovation Corridor" that will promote access to talent, research collaboration, and knowledge sharing. There will be enhanced pedestrian connections and landscaped communal space that will also benefit the local community.", "The proposed development will be compatible with the surrounding area by adopting a terraced building design that blends with the topography, while also creating an accessible environment by enhancing pedestrian facilities, attracting talents and providing new impetus to economic activities in the southern district.", "The Global Innovation Centre's interdisciplinary approach, which brings together researchers from various fields, will need dedicated space to accommodate various upstream research activities. As some experiments necessitate specialised equipment and spatial designs, having the large footprint with utility support, and flexibility for future expansion will also attract both local and international research teams to the GIC, which can ultimately grow the talent pool of Hong Kong.", "First conceived in the 2021 Policy Address, the Global Innovation Centre supports the National 14th Five-Year Plan and the Hong Kong Innovation and Technology Development Blueprint. I believe that the Global Innovation Centre will provide a transdisciplinary hub for deep technology and basic research, that will enable scientists to tackle some of the world's most pressing challenges, which is also an important impetus for Hong Kong's future economic growth.", "Propelling upstream basic research at the Global Innovation Centre will be beneficial to the entire I&T ecosystem. By creating high-value and highly-skilled jobs, creating synergy across I&T stakeholders, and attracting more global talent and enterprises, the GIC aspires to generate research outcomes that can support technology transfer and commercialisation at universities, research institutes, enterprises, and startups.", "As part of the city-wide effort to enhance innovation and technology competitiveness, the proposed Global Innovation Centre can create more development opportunities for local scientists, researchers, and aspiring entrepreneurs, thereby promoting I&T development and aligning with strategic government policies of new industrialisation and driving quality economic growth.", "The Global Innovation Centre will provide researchers with the necessary infrastructure to conduct cutting-edge research in quantum science, atomic science, health sciences, artificial intelligence, sustainable energy, and financial technology. It will provide advanced laboratory

Urgent Return receipt Expand Group Restricted Prevent Copy

space, and shared facilities that will enable researchers to work together with researchers from various disciplines, fostering international collaboration."]

I would like to make further comments below:

The project will boost HKU's research efforts immensely, for the benefit of society at large. I support this project.

Best regards,
Chan Sheung Kwan

I would like to make further comments below:

To position Hong Kong as a premier international hub for Innovation and Technology (I&T), it is essential to attract leading scientists globally with state-of-the-art facilities. The University of Hong Kong (HKU), as a pivotal academic super-connector, is ideally suited to spearhead this initiative through inclusive, transdisciplinary innovation centers.

Best regards,
Wang Peng

Representation Relating to Plan No. S/H10/22 (Support Item A)

I am writing in support of Item A, draft Pok Fu Lam Outline Zoning Plan No. S/H10/22 as gazetted on March 22, 2024 under section 5 of Town Planning Ordinance.

The proposed development will be compatible with the surrounding area by adopting a terraced building design that blends with the topography, while also creating an accessible environment by enhancing pedestrian facilities, attracting talents and providing new impetus to economic activities in the southern district.

Propelling upstream basic research at the Global Innovation Centre will be beneficial to the entire I&T ecosystem. By creating high-value and highly-skilled jobs, creating synergy across I&T stakeholders, and attracting more global talent and enterprises, the GIC aspires to generate research outcomes that can support technology transfer and commercialisation at universities, research institutes, enterprises, and startups.

The Global Innovation Centre's location in Pokfulam, with proximity to the Sassoon Road Campus, Queen Mary Hospital, and Cyberport, will create synergy with HKU's existing campuses, forming an "Island Innovation Corridor" that will promote access to talent, research collaboration, and knowledge sharing. There will be enhanced pedestrian connections and landscaped communal space that will also benefit the local community.

The rezoning of the lot supports the development of HKU as a world-renowned university that helps attract talents from over the world, which aligns with the Government's strategic direction.

Best regards,
Choi, Yin Yuk

Representation Number:

TPB/R/S/H10/22- R113

To: Town Planning Board Secretariat (tpbpd@pland.gov.hk)

I am writing in support of Item A, draft Pok Fu Lam Outline Zoning Plan No. S/H10/22 as gazetted on March 22, 2024 under section 5 of Town Planning Ordinance.

Item A – Rezoning of a site between Pok Fu Lam Road and Victoria Road from “Green Belt” (“GB”), “Residential (Group C)6” and area shown as ‘Road’ to “Other Specified Uses” annotated “Global Innovation Centre” (“OU(Global Innovation Centre)”).

My reasons are as follows:

[“The Global Innovation Centre's interdisciplinary approach, which brings together researchers from various fields, will need dedicated space to accommodate various upstream research activities. As some experiments necessitate specialised equipment and spatial designs, having the large footprint with utility support, and flexibility for future expansion will also attract both local and international research teams to the GIC, which can ultimately grow the talent pool of Hong Kong.”, “First conceived in the 2021 Policy Address, the Global Innovation Centre supports the National 14th Five-Year Plan and the Hong Kong Innovation and Technology Development Blueprint. I believe that the Global Innovation Centre will provide a transdisciplinary hub for deep technology and basic research, that will enable scientists to tackle some of the world's most pressing challenges, which is also an important impetus for Hong Kong's future economic growth.”, “Propelling upstream basic research at the Global Innovation Centre will be beneficial to the entire I&T ecosystem. By creating high-value and highly-skilled jobs, creating synergy across I&T stakeholders, and attracting more global talent and enterprises, the GIC aspires to generate research outcomes that can support technology transfer and commercialisation at universities, research institutes, enterprises, and startups.”, “As part of the city-wide effort to enhance innovation and technology competitiveness, the proposed Global Innovation Centre can create more development opportunities for local scientists, researchers, and aspiring entrepreneurs, thereby promoting I&T development and aligning with strategic government policies of new industrialisation and driving quality economic growth.”, “The proposed development will be compatible with the surrounding area by adopting a terraced building design that blends with the topography, while also creating an accessible environment by enhancing pedestrian facilities, attracting talents and providing new impetus to economic activities in the southern district.”, “The Global Innovation Centre's location in Pokfulam, with proximity to the Sassoon Road Campus, Queen Mary Hospital, and Cyberport, will create synergy with HKU's existing campuses, forming an “Island Innovation Corridor” that will promote access to talent, research collaboration, and knowledge sharing. There will be enhanced pedestrian connections and landscaped communal space that will also benefit the local community.”, “The Global Innovation Centre will provide researchers with the necessary infrastructure to conduct cutting-edge research in quantum science, atomic science, health sciences, artificial intelligence, sustainable energy, and financial technology. It will provide advanced

Representation Relating to Plan No. S/H10/22 (Support Item A)

Name: Yuen Ming Yu

HKID: [REDACTED]

I am writing in support of Item A, draft Pok Fu Lam Outline Zoning Plan No. S/H10/22 as gazetted on March 22, 2024 under section 5 of Town Planning Ordinance.

My reasons are as follows:

First conceived in the 2021 Policy Address, the Global Innovation Centre (GIC) supports the National 14th Five-Year Plan and the Hong Kong Innovation and Technology Development Blueprint. I believe that the GIC will provide a transdisciplinary hub for deep technology and basic research, that will enable scientists to tackle some of the world's most pressing challenges, which is also an important impetus for Hong Kong's future economic growth.

The Global Innovation Centre's interdisciplinary approach, which brings together researchers from various fields, will need dedicated space to accommodate various upstream research activities. As some experiments necessitate specialised equipment and spatial designs, having the large footprint with utility support, and flexibility for future expansion will also attract both local and international research teams to the GIC, which can ultimately grow the talent pool of Hong Kong.

The GIC's location in Pokfulam, with proximity to the Sassoon Road Campus, Queen Mary Hospital, and Cyberport, will create a synergy with HKU's existing campuses, forming an "Island Innovation Corridor" that will promote access to talent, research collaboration, and knowledge sharing. There will be enhanced pedestrian connections and landscaped communal space that will also benefit the local community.

As part of the city-wide effort to enhance innovation and technology competitiveness, the proposed Global Innovation Centre can create more development opportunities for local scientists, researchers, and aspiring entrepreneurs, thereby promoting I&T development and aligning with strategic government policies of new industrialisation and driving quality economic growth.

Regards,
Yuen Ming Yu

Subject: Representation Relating to Plan No. S/H10/22 (Support Item A)

Representation Number:
TPB/R/S/H10/22- R123

To: Town Planning Board Secretariat (tpbpd@pland.gov.hk)

I am writing in support of Item A, draft Pok Fu Lam Outline Zoning Plan No. S/H10/22 as gazetted on March 22, 2024 under section 5 of Town Planning Ordinance.

Item A – Rezoning of a site between Pok Fu Lam Road and Victoria Road from “Green Belt” (“GB”), “Residential (Group C)6” and area shown as ‘Road’ to “Other Specified Uses” annotated “Global Innovation Centre” (“OU(Global Innovation Centre)”).

My reasons are as follows:

[“The Global Innovation Centre's location in Pokfulam, with proximity to the Sassoon Road Campus, Queen Mary Hospital, and Cyberport, will create synergy with HKU's existing campuses, forming an “Island Innovation Corridor” that will promote access to talent, research collaboration, and knowledge sharing. There will be enhanced pedestrian connections and landscaped communal space that will also benefit the local community.”, “The Global Innovation Centre will provide researchers with the necessary infrastructure to conduct cutting-edge research in quantum science, atomic science, health sciences, artificial intelligence, sustainable energy, and financial technology. It will provide advanced laboratory space, and shared facilities that will enable researchers to work together with researchers from various disciplines, fostering international collaboration.”, “The Global Innovation Centre's interdisciplinary approach, which brings together researchers from various fields, will need dedicated space to accommodate various upstream research activities. As some experiments necessitate specialised equipment and spatial designs, having the large footprint with utility support, and flexibility for future expansion will also attract both local and international research teams to the GIC, which can ultimately grow the talent pool of Hong Kong.”, “Propelling upstream basic research at the Global Innovation Centre will be beneficial to the entire I&T ecosystem. By creating high-value and highly-skilled jobs, creating synergy across I&T stakeholders, and attracting more global talent and enterprises, the GIC aspires to generate research outcomes that can support technology transfer and commercialisation at universities, research institutes, enterprises, and startups.”]

I would like to make further comments below:

HK needs to develop our basic research lab. It helps attract talents from worldwide.

Best regards,
So Shun Yan

Representation Relating to Plan No. S/H10/22 (Support Item A)

Name: Mr Kwong Hing Hung

HKID/Passport : [REDACTED]

I am writing in support of Item A, draft Pok Fu Lam Outline Zoning Plan No. S/H10/22 as gazetted on March 22, 2024 under section 5 of Town Planning Ordinance.

My reasons are as follows:

First conceived in the 2021 Policy Address, the Global Innovation Centre (GIC) supports the National 14th Five-Year Plan and the Hong Kong Innovation and Technology Development Blueprint. I believe that the GIC will provide a transdisciplinary hub for deep technology and basic research, that will enable scientists to tackle some of the world's most pressing challenges, which is also an important impetus for Hong Kong's future economic growth.

The Global Innovation Centre's interdisciplinary approach, which brings together researchers from various fields, will need dedicated space to accommodate various upstream research activities. As some experiments necessitate specialised equipment and spatial designs, having the large footprint with utility support, and flexibility for future expansion will also attract both local and international research teams to the GIC, which can ultimately grow the talent pool of Hong Kong.

The GIC's location in Pokfulam, with proximity to the Sassoon Road Campus, Queen Mary Hospital, and Cyberport, will create a synergy with HKU's existing campuses, forming an "Island Innovation Corridor" that will promote access to talent, research collaboration, and knowledge sharing. There will be enhanced pedestrian connections and landscaped communal space that will also benefit the local community.

As part of the city-wide effort to enhance innovation and technology competitiveness, the proposed Global Innovation Centre can create more development opportunities for local scientists, researchers, and aspiring entrepreneurs, thereby promoting I&T development and aligning with strategic government policies of new industrialisation and driving quality economic growth.

There will be enhanced pedestrian connections and landscaped communal space that will also benefit the local community.", "Propelling upstream basic research at the Global Innovation Centre will be beneficial to the entire I&T ecosystem. By creating high-value and highly-skilled jobs, creating synergy across I&T stakeholders, and attracting more global talent and enterprises, the GIC aspires to generate research outcomes that can support technology transfer and commercialisation at universities, research institutes, enterprises, and startups.", "First conceived in the 2021 Policy Address, the Global Innovation Centre supports the National 14th Five-Year Plan and the Hong Kong Innovation and Technology Development Blueprint. I believe that the Global Innovation Centre will provide a transdisciplinary hub for deep technology and basic research, that will enable scientists to tackle some of the world's most pressing challenges, which is also an important impetus for Hong Kong's future economic growth.", "As part of the city-wide effort to enhance innovation and technology competitiveness, the proposed Global Innovation Centre can create more development opportunities for local scientists, researchers, and aspiring entrepreneurs, thereby promoting I&T development and aligning with strategic government policies of new industrialisation and driving quality economic growth.", "The Global Innovation Centre's interdisciplinary approach, which brings together researchers from various fields, will need dedicated space to accommodate various upstream research activities. As some experiments necessitate specialised equipment and spatial designs, having the large footprint with utility support, and flexibility for future expansion will also attract both local and international research teams to the GIC, which can ultimately grow the talent pool of Hong Kong.", "The Global Innovation Centre will provide researchers with the necessary infrastructure to conduct cutting-edge research in quantum science, atomic science, health sciences, artificial intelligence, sustainable energy, and financial technology. It

Urgent Return receipt Expand Group Restricted Prevent Copy

will provide advanced laboratory space, and shared facilities that will enable researchers to work together with researchers from various disciplines, fostering international collaboration."]

I would like to make further comments below:

I support the development of the Global Innovation Centre because it will create a vibrant "Island Innovation Corridor" that fosters collaboration among researchers, institutions, and enterprises, driving advancements in various cutting-edge fields. The Centre's strategic location and enhanced pedestrian facilities will make it accessible and beneficial to both the academic community and local residents. Moreover, by providing state-of-the-art infrastructure and creating high-value jobs, the GIC will attract global talent, support technology transfer, and contribute significantly to Hong Kong's economic growth and technological competitiveness.

Best regards,
Lam Wing Yan

Submission Number:

TPB/R/S/H10/22- S276

From: Microsoft Power Apps and Power Automate

Sent: 2024-05-19 星期日 07:48:47

Representation Number:

TPB/R/S/H10/22- R134

To: tpbpd/PLAND <tpbpd@pland.gov.hk>

Subject: Representation Relating to Plan No. S/H10/22 (Support Item A)

To: Town Planning Board Secretariat (tpbpd@pland.gov.hk)

I am writing in support of Item A, draft Pok Fu Lam Outline Zoning Plan No. S/H10/22 as gazetted on March 22, 2024 under section 5 of Town Planning Ordinance.

Item A – Rezoning of a site between Pok Fu Lam Road and Victoria Road from “Green Belt” (“GB”), “Residential (Group C)6” and area shown as ‘Road’ to “Other Specified Uses” annotated “Global Innovation Centre” (“OU(Global Innovation Centre)”).

My reasons are as follows:

["The Global Innovation Centre will provide researchers with the necessary infrastructure to conduct cutting-edge research in quantum science, atomic science, health sciences, artificial intelligence, sustainable energy, and financial technology. It will provide advanced laboratory space, and shared facilities that will enable researchers to work together with researchers from various disciplines, fostering international collaboration.", "As part of the city-wide effort to enhance innovation and technology competitiveness, the proposed Global Innovation Centre can create more development opportunities for local scientists, researchers, and aspiring entrepreneurs, thereby promoting I&T development and aligning with strategic government policies of new industrialisation and driving quality economic growth.", "The Global Innovation Centre's interdisciplinary approach, which brings together researchers from various fields, will need dedicated space to accommodate various upstream research activities. As some experiments necessitate specialised equipment and spatial designs, having the large footprint with utility support, and flexibility for future expansion will also attract both local and international research teams to the GIC, which can ultimately grow the talent pool of Hong Kong."]

I would like to make further comments below:

The proposed center has the potential to strongly advance interdisciplinary cutting edge research and to translate these into novel solutions. A corresponding space and initiative is currently lacking and has the potential to transform and advance economy, innovation and mental health. A strong interdisciplinary focus on mental health - AI and brain-computing has the potential to form a unique environment for research and innovation.

Best regards,
Benjamin Becker

I would like to make further comments below:

As a resident in the Pokfulam area, Ex-District Council Members are mobilizing residents to object the plan. I think that this is a very unreasonable move of not-in-my-backyard disease which limit the potential of HK as an innovation hub in technology and research which can be translated into health and social care for the benefit of the population. Hong Kong needs space for innovation and this is a perfect site for development as it is hidden under the slope of Pokfulam. The space is in synergy near HKU, Cyberport and QMH, a perfect space for innovation and research development.

Best regards,
Chan Lai Wan Cecilia
Pokfulam HKU development of the Global Innovation Centre

Item A – Rezoning of a site between Pok Fu Lam Road and Victoria Road from “Green Belt” (“GB”), “Residential (Group C)6” and area shown as ‘Road’ to “Other Specified Uses” annotated “Global Innovation Centre” (“OU(Global Innovation Centre)”).

My reasons are as follows:

["The Global Innovation Centre's interdisciplinary approach, which brings together researchers from various fields, will need dedicated space to accommodate various upstream research activities. As some experiments necessitate specialised equipment and spatial designs, having the large footprint with utility support, and flexibility for future expansion will also attract both local and international research teams to the GIC, which can ultimately grow the talent pool of Hong Kong."]

I would like to make further comments below:

The GIC will undoubtedly provide a open and inclusive platform for top talents to develop and showcase new technologies. Through research and development initiatives, it can contribute to technological advancements in various field, especially in high-tech researches. Importantly, the wide space in GIC will accommodate more researchers and professional equipments, allowing them to seek technological breakthroughs more freely.

Best regards,
WANG KAI

Subject: Representation Relating to Plan No. S/H10/22 (Support Item A)

Representation Number:

TPB/R/S/H10/22- R146

To: Town Planning Board Secretariat (tpbpd@pland.gov.hk)

I am writing in support of Item A, draft Pok Fu Lam Outline Zoning Plan No. S/H10/22 as gazetted on March 22, 2024 under section 5 of Town Planning Ordinance.

Item A – Rezoning of a site between Pok Fu Lam Road and Victoria Road from “Green Belt” (“GB”), “Residential (Group C)6” and area shown as ‘Road’ to “Other Specified Uses” annotated “Global Innovation Centre” (“OU(Global Innovation Centre)”).

My reasons are as follows:

["The Global Innovation Centre will provide researchers with the necessary infrastructure to conduct cutting-edge research in quantum science, atomic science, health sciences, artificial intelligence, sustainable energy, and financial technology. It will provide advanced laboratory space, and shared facilities that will enable researchers to work together with researchers from various disciplines, fostering international collaboration." "First conceived in the 2021 Policy Address, the Global Innovation Centre supports the National 14th Five-Year Plan and the Hong Kong Innovation and Technology Development Blueprint. I believe that the Global Innovation Centre will provide a transdisciplinary hub for deep technology and basic research, that will enable scientists to tackle some of the world's most pressing challenges, which is also an important impetus for Hong Kong's future economic growth."]

I would like to make further comments below:

The proposed Global Innovation Centre can create more development opportunities for local scientists, researchers, and aspiring entrepreneurs, thereby promoting quality and sustainable development of HK and the GBA.

Best regards,
ZHANG ZHIQIAN
Dr

I would like to make further comments below:

As a PhD student working in the mental health field, I believe that establishing a Global Innovation Centre would foster collaboration among experts from multiple fields, leading to innovative breakthroughs in understanding mental health disorders and developing effective interventions. The Centre can serve as a hub for bridging the gap between research and practice, facilitating the dissemination of evidence-based interventions, promoting awareness and education, and influencing mental health policies and practices on a global scale.

Best regards,
Run JIN
Ms.

I would like to make further comments below:

Supporting the development of the Global Innovation Centre at Pokfulam for The University of Hong Kong (HKU) is crucial for several reasons: 1. Enhancing Research Capabilities: Establishing advanced facilities for deep technology research will significantly enhance HKU's research capabilities. This development will provide state-of-the-art infrastructure, enabling researchers to conduct cutting-edge experiments and develop innovative technologies. 2. Promoting Technological Advancements: The Global Innovation Centre will focus on deep technology, which includes fields such as artificial intelligence, biotechnology, and quantum computing. By supporting this initiative, Hong Kong can become a leader in these transformative technologies, driving global technological advancements. 3. Attracting Top Talent: World-class research facilities attract top-tier researchers, scientists, and students from around the globe. This influx of talent will foster a vibrant academic and research environment, contributing to Hong Kong's reputation as a leading hub for innovation and education. 4. Boosting the Local Economy: Investment in deep technology research will stimulate the local economy by creating high-value jobs and fostering the growth of technology startups and spin-off companies. This will lead to increased economic diversification and resilience. 5. Strengthening International Collaboration: The Global Innovation Centre can serve as a nexus for international collaboration, bringing together researchers and institutions from different countries. This will enhance Hong Kong's global research network and facilitate the exchange of knowledge and expertise. 6. Addressing Global Challenges: Research conducted at the Centre will likely address some of the most pressing global challenges, such as climate change, healthcare, and sustainable development. By contributing solutions to these issues, Hong Kong can play a pivotal role in improving global well-being. 7. Supporting Policy Objectives: The establishment of the Global Innovation Centre aligns with the 2021 Policy Address's objectives to strengthen Hong Kong's advantage in upstream research. This support demonstrates the government's commitment to fostering a robust innovation ecosystem. 8. Encouraging Innovation and Entrepreneurship: By providing resources and support for deep technology research, the Centre will encourage innovation and entrepreneurship among students and researchers. This can lead to the creation of new products, services, and business models, driving long-term economic growth. 9. Improving Education and Training: The Centre will offer advanced educational opportunities and training programs in deep technology fields, equipping the next generation of scientists and engineers with the skills needed to thrive in a rapidly evolving technological landscape. 10. Enhancing Hong Kong's Competitiveness: By investing in deep technology research, Hong Kong can strengthen its competitive edge in the global innovation landscape. This will attract further investments, partnerships, and opportunities, solidifying its position as a leading international city for research and development.

Best regards,
LIU Bin

utility support, and flexibility for future expansion will also attract both local and international research teams to the GIC, which can ultimately grow the talent pool of Hong Kong."]

I would like to make further comments below:

Upstream foundational research is important because it provides the building blocks for applied research and innovation. Scientists require a bigger place to build their products or solutions, just like Quantum Computer, Renewable Energy, etc.

Best regards,
Jessie Tsag

Representation Number:
TPB/R/S/H10/22- R156

To: Town Planning Board Secretariat (tpbpd@pland.gov.hk)

I am writing in support of Item A, draft Pok Fu Lam Outline Zoning Plan No. S/H10/22 as gazetted on March 22, 2024 under section 5 of Town Planning Ordinance.

Item A – Rezoning of a site between Pok Fu Lam Road and Victoria Road from “Green Belt” (“GB”), “Residential (Group C)6” and area shown as ‘Road’ to “Other Specified Uses” annotated “Global Innovation Centre” (“OU(Global Innovation Centre)”).

My reasons are as follows:

["First conceived in the 2021 Policy Address, the Global Innovation Centre supports the National 14th Five-Year Plan and the Hong Kong Innovation and Technology Development Blueprint. I believe that the Global Innovation Centre will provide a transdisciplinary hub for deep technology and basic research, that will enable scientists to tackle some of the world's most pressing challenges, which is also an important impetus for Hong Kong's future economic growth.", "The Global Innovation Centre's interdisciplinary approach, which brings together researchers from various fields, will need dedicated space to accommodate various upstream research activities. As some experiments necessitate specialised equipment and spatial designs, having the large footprint with utility support, and flexibility for future expansion will also attract both local and international research teams to the GIC, which can ultimately grow the talent pool of Hong Kong.", "The Global Innovation Centre's location in Pokfulam, with proximity to the Sassoon Road Campus, Queen Mary Hospital, and Cyberport, will create synergy with HKU's existing campuses, forming an "Island Innovation Corridor" that will promote access to talent, research collaboration, and knowledge sharing. There will be enhanced pedestrian connections and landscaped communal space that will also benefit the local community.", "The Global Innovation Centre will provide researchers with the necessary infrastructure to conduct cutting-edge research in quantum science, atomic science, health sciences, artificial intelligence, sustainable energy, and financial technology. It will provide advanced laboratory space, and shared facilities that will enable researchers to work together with researchers from various disciplines, fostering international collaboration.", "Propelling upstream basic research at the Global Innovation Centre will be beneficial to the entire I&T ecosystem. By creating high-value and highly-skilled jobs, creating synergy across I&T stakeholders, and attracting more global talent and enterprises, the GIC aspires to generate research outcomes that can support technology transfer and commercialisation at universities, research institutes, enterprises, and startups.", "As part of the city-wide effort to enhance innovation and technology competitiveness, the proposed Global Innovation Centre can create more development opportunities for local scientists, researchers, and aspiring entrepreneurs, thereby promoting I&T development and aligning with strategic government policies of new industrialisation and driving quality economic growth.", "The proposed development will be compatible with the surrounding area by adopting a terraced building design that blends with the

Urgent Return receipt Expand Group Restricted Prevent Copy

topography, while also creating an accessible environment by enhancing pedestrian facilities, attracting talents and providing new impetus to economic activities in the southern district."]

I would like to make further comments below:
Terrific chance for HKU in the next few decades.

There will be enhanced pedestrian connections and landscaped communal space that will also benefit the local community.”]

I would like to make further comments below:

As a 3D printing startup founder on downstream service provider, I am strongly supportive of the development of the Global Innovation Centre for the following key reasons: Support for fundamental research: The centre will drive critical upstream research in areas like materials science and advanced manufacturing, which can provide a strong foundation to advance 3D printing technology and

Urgent Return receipt Expand Group Restricted Prevent Copy

innovation. Ecosystem building: The centre will serve as a hub to bring together research institutions, enterprises, and investors, creating a supportive innovation ecosystem for 3D printing startups like mine. I would be extremely keen to actively participate in and leverage the opportunities presented by the Global Innovation Centre, if possible in the future.

Best regards,
Li Dick

I would like to make further comments below:

Innovations will be an important element in the future economic development in Hong Kong. To have more highly educated persons and talents are vital in upgrading the population composition. The location of the Global Innovation Centre at the Pokfulam area is appropriate as this is a low population density area which is attractive to the high education/income group.

Best regards,
LO Chin Man Edward
Professor

I would like to make further comments below:

The proposed GIC will act as a center for high-level scientific research in Hong Kong that can cut across disciplines, and deliver truly innovative breakthroughs than can directly benefit society in the medium term. It will act as a magnet, encouraging global researchers of the highest caliber to relocate to Hong Kong, to work collaboratively with local and national partners. Establishing the GIC will be a strong positive step forward for future scientific innovation in the Hong Kong-Greater Bay Area. The Pok Fu Lam location will be ideal for fostering positive synergies between HKU staff, Queen Mary Hospital clinical and medical experts, and tech businesses located at the Cyberport.

Best regards,
Watt, Rory Munro
Professor

TPB/R/S/H10/22- R166

To: Town Planning Board Secretariat (tpbpd@pland.gov.hk)

I am writing in support of Item A, draft Pok Fu Lam Outline Zoning Plan No. S/H10/22 as gazetted on March 22, 2024 under section 5 of Town Planning Ordinance.

Item A – Rezoning of a site between Pok Fu Lam Road and Victoria Road from “Green Belt” (“GB”), “Residential (Group C)6” and area shown as ‘Road’ to “Other Specified Uses” annotated “Global Innovation Centre” (“OU(Global Innovation Centre)”).

My reasons are as follows:

["The Global Innovation Centre's interdisciplinary approach, which brings together researchers from various fields, will need dedicated space to accommodate various upstream research activities. As some experiments necessitate specialised equipment and spatial designs, having the large footprint with utility support, and flexibility for future expansion will also attract both local and international research teams to the GIC, which can ultimately grow the talent pool of Hong Kong.", "The Global Innovation Centre's location in Pokfulam, with proximity to the Sassoon Road Campus, Queen Mary Hospital, and Cyberport, will create synergy with HKU's existing campuses, forming an "Island Innovation Corridor" that will promote access to talent, research collaboration, and knowledge sharing. There will be enhanced pedestrian connections and landscaped communal space that will also benefit the local community.", "The proposed development will be compatible with the surrounding area by adopting a terraced building design that blends with the topography, while also creating an accessible environment by enhancing pedestrian facilities, attracting talents and providing new impetus to economic activities in the southern district.", "The Global Innovation Centre will provide researchers with the necessary infrastructure to conduct cutting-edge research in quantum science, atomic science, health sciences, artificial intelligence, sustainable energy, and financial technology. It will provide advanced laboratory space, and shared facilities that will enable researchers to work together with researchers from various disciplines, fostering international collaboration."]

I would like to make further comments below:

HK needs to innovate. Having a dedicated space will enable talent to be based there.

Best regards,
Joseph Chi Hou HO
Program Director

I would like to make further comments below:

Suggest organizing more interdisciplinary research conferences, seminars, or even competitions that both researchers and students can participate in. Offering a few small funding sources would make these events more attractive.

Best regards,
Cui Guo
Assistant Professor

Subject: Representation Relating to Plan No. S/H10/22 (Support Item A)

Representation Number:

TPB/R/S/H10/22- R178

To: Town Planning Board Secretariat (tpbpd@pland.gov.hk)

I am writing in support of Item A, draft Pok Fu Lam Outline Zoning Plan No. S/H10/22 as gazetted on March 22, 2024 under section 5 of Town Planning Ordinance.

Item A – Rezoning of a site between Pok Fu Lam Road and Victoria Road from “Green Belt” (“GB”), “Residential (Group C)6” and area shown as ‘Road’ to “Other Specified Uses” annotated “Global Innovation Centre” (“OU(Global Innovation Centre)”).

My reasons are as follows:

["The Global Innovation Centre's location in Pokfulam, with proximity to the Sassoon Road Campus, Queen Mary Hospital, and Cyberport, will create synergy with HKU's existing campuses, forming an "Island Innovation Corridor" that will promote access to talent, research collaboration, and knowledge sharing. There will be enhanced pedestrian connections and landscaped communal space that will also benefit the local community.", "First conceived in the 2021 Policy Address, the Global Innovation Centre supports the National 14th Five-Year Plan and the Hong Kong Innovation and Technology Development Blueprint. I believe that the Global Innovation Centre will provide a transdisciplinary hub for deep technology and basic research, that will enable scientists to tackle some of the world's most pressing challenges, which is also an important impetus for Hong Kong's future economic growth.", "Propelling upstream basic research at the Global Innovation Centre will be beneficial to the entire I&T ecosystem. By creating high-value and highly-skilled jobs, creating synergy across I&T stakeholders, and attracting more global talent and enterprises, the GIC aspires to generate research outcomes that can support technology transfer and commercialisation at universities, research institutes, enterprises, and startups.", "The Global Innovation Centre's interdisciplinary approach, which brings together researchers from various fields, will need dedicated space to accommodate various upstream research activities. As some experiments necessitate specialised equipment and spatial designs, having the large footprint with utility support, and flexibility for future expansion will also attract both local and international research teams to the GIC, which can ultimately grow the talent pool of Hong Kong.", "The proposed development will be compatible with the surrounding area by adopting a terraced building design that blends with the topography, while also creating an accessible environment by enhancing pedestrian facilities, attracting talents and providing new impetus to economic activities in the southern district.", "As part of the city-wide effort to enhance innovation and technology competitiveness, the proposed Global Innovation Centre can create more development opportunities for local scientists, researchers, and aspiring entrepreneurs, thereby promoting I&T development and aligning with strategic government policies of new industrialisation and driving quality economic growth.", "The Global Innovation Centre will provide researchers with the necessary infrastructure to conduct cutting-edge research in quantum science, atomic science, health sciences, artificial intelligence, sustainable energy, and financial technology. It will provide

Urgent Return receipt Expand Group Restricted Prevent Copy

advanced laboratory space, and shared facilities that will enable researchers to work together with researchers from various disciplines, fostering international collaboration."]

I would like to make further comments below:

The KPI for setting GIC's management team shall include how many cases(ratio) successfully commercialised from Research and development team, how many business will exist and/or go to IPO at the end. The key factor is that the management team/advisory team of GIC shall include professionals from legal, accounting, incubation services, investors and business-connectors, instead of including professors only. The mix of management team will drive the success of GIC, instead of setting a new research centre.

Best regards,
LAI TAT SHING
President

thereby promoting I&T development and aligning with strategic government policies of new industrialisation and driving quality economic growth."]

I would like to make further comments below:

Given the lack of space available near HKU for research and development, HKU researchers have been severely constrained in growing their R&D activities in support of our governments goals to further enhance Hong Kong's work in technology development and basic research. The proposed Global Innovation Centre represents an ideal solution for Hong Kong. It meets our governments' goals and is in an ideal location - close to HKU. Many HKU faculty members live very close to the proposed site of the GIC and we all support this.

Best regards,

David Joseph SROLOVITZ

Chair of Materials Theory, Professor of Mechanical Engineering, Dean of Engineering, HKU

Representation Relating to Plan No. S/H10/22 (Support Item A)

Name: Ming Wen

Dean of the Faculty of Social Sciences

HKID/Passport : [REDACTED]

I am writing in support of Item A, draft Pok Fu Lam Outline Zoning Plan No. S/H10/22 as gazetted on March 22, 2024 under section 5 of Town Planning Ordinance.

My reasons are as follows:

First conceived in the 2021 Policy Address, the Global Innovation Centre (GIC) supports the National 14th Five-Year Plan and the Hong Kong Innovation and Technology Development Blueprint. I believe that the GIC will provide a transdisciplinary hub for deep technology and basic research, that will enable scientists to tackle some of the world's most pressing challenges, which is also an important impetus for Hong Kong's future economic growth.

The Global Innovation Centre's interdisciplinary approach, which brings together researchers from various fields, will need dedicated space to accommodate various upstream research activities. As some experiments necessitate specialised equipment and spatial designs, having the large footprint with utility support, and flexibility for future expansion will also attract both local and international research teams to the GIC, which can ultimately grow the talent pool of Hong Kong.

The GIC's location in Pokfulam, with proximity to the Sassoon Road Campus, Queen Mary Hospital, and Cyberport, will create a synergy with HKU's existing campuses, forming an "Island Innovation Corridor" that will promote access to talent, research collaboration, and knowledge sharing. There will be enhanced pedestrian connections and landscaped communal space that will also benefit the local community.

As part of the city-wide effort to enhance innovation and technology competitiveness, the proposed Global Innovation Centre can create more development opportunities for local scientists, researchers, and aspiring entrepreneurs, thereby promoting I&T development and aligning with strategic government policies of new industrialisation and driving quality economic growth.

Subject: Representation Relating to Plan No. S/H10/22 (Support Item A)

Representation Number:
TPB/R/S/H10/22- R188

To: Town Planning Board Secretariat (tpbpd@pland.gov.hk)

I am writing in support of Item A, draft Pok Fu Lam Outline Zoning Plan No. S/H10/22 as gazetted on March 22, 2024 under section 5 of Town Planning Ordinance.

Item A – Rezoning of a site between Pok Fu Lam Road and Victoria Road from “Green Belt” (“GB”), “Residential (Group C)6” and area shown as ‘Road’ to “Other Specified Uses” annotated “Global Innovation Centre” (“OU(Global Innovation Centre)”).

My reasons are as follows:

["The Global Innovation Centre's interdisciplinary approach, which brings together researchers from various fields, will need dedicated space to accommodate various upstream research activities. As some experiments necessitate specialised equipment and spatial designs, having the large footprint with utility support, and flexibility for future expansion will also attract both local and international research teams to the GIC, which can ultimately grow the talent pool of Hong Kong.", "Propelling upstream basic research at the Global Innovation Centre will be beneficial to the entire I&T ecosystem. By creating high-value and highly-skilled jobs, creating synergy across I&T stakeholders, and attracting more global talent and enterprises, the GIC aspires to generate research outcomes that can support technology transfer and commercialisation at universities, research institutes, enterprises, and startups. ", "The Global Innovation Centre's location in Pokfulam, with proximity to the Sassoon Road Campus, Queen Mary Hospital, and Cyberport, will create synergy with HKU's existing campuses, forming an \"Island Innovation Corridor\" that will promote access to talent, research collaboration, and knowledge sharing. There will be enhanced pedestrian connections and landscaped communal space that will also benefit the local community.", "As part of the city-wide effort to enhance innovation and technology competitiveness, the proposed Global Innovation Centre can create more development opportunities for local scientists, researchers, and aspiring entrepreneurs, thereby promoting I&T development and aligning with strategic government policies of new industrialisation and driving quality economic growth."]

I would like to make further comments below:

Conducive to HKSARG's policy direction of Innovation and Tech development

[Your Title (optional)] Dr.

HKID/Passport : [REDACTED] [First 4 digits - required by Town Planning Board]

I am writing in support of Item A, draft Pok Fu Lam Outline Zoning Plan No. S/H10/22 as gazetted on March 22, 2024 under section 5 of Town Planning Ordinance.

My reasons are as follows:

First conceived in the 2021 Policy Address, the Global Innovation Centre (GIC) supports the National 14th Five-Year Plan and the Hong Kong Innovation and Technology Development Blueprint. I believe that the GIC will provide a transdisciplinary hub for deep technology and basic research, that will enable scientists to tackle some of the world's most pressing challenges, which is also an important impetus for Hong Kong's future economic growth.

The Global Innovation Centre's interdisciplinary approach, which brings together researchers from various fields, will need dedicated space to accommodate various upstream research activities. As some experiments necessitate specialised equipment and spatial designs, having the large footprint with utility support, and flexibility for future expansion will also attract both local and international research teams to the GIC, which can ultimately grow the talent pool of Hong Kong.

The GIC's location in Pokfulam, with proximity to the Sassoon Road Campus, Queen Mary Hospital, and Cyberport, will create a synergy with HKU's existing campuses, forming an "Island Innovation Corridor" that will promote access to talent, research collaboration, and knowledge sharing. There will be enhanced pedestrian connections and landscaped communal space that will also benefit the local community.

As part of the city-wide effort to enhance innovation and technology competitiveness, the proposed Global Innovation Centre can create more development opportunities for local scientists, researchers, and aspiring entrepreneurs, thereby promoting I&T development and aligning with strategic government policies of new industrialisation and driving quality economic growth.

Subject: Representation Relating to Plan No. S/H10/22 (Support Item A)

Representation Number:
TPB/R/S/H10/22- R199

To: Town Planning Board Secretariat (tpbpd@pland.gov.hk)

I am writing in support of Item A, draft Pok Fu Lam Outline Zoning Plan No. S/H10/22 as gazetted on March 22, 2024 under section 5 of Town Planning Ordinance.

Item A – Rezoning of a site between Pok Fu Lam Road and Victoria Road from “Green Belt” (“GB”), “Residential (Group C)6” and area shown as ‘Road’ to “Other Specified Uses” annotated “Global Innovation Centre” (“OU(Global Innovation Centre)”).

My reasons are as follows:

[“First conceived in the 2021 Policy Address, the Global Innovation Centre supports the National 14th Five-Year Plan and the Hong Kong Innovation and Technology Development Blueprint. I believe that the Global Innovation Centre will provide a transdisciplinary hub for deep technology and basic research, that will enable scientists to tackle some of the world’s most pressing challenges, which is also an important impetus for Hong Kong’s future economic growth.”, “The Global Innovation Centre’s interdisciplinary approach, which brings together researchers from various fields, will need dedicated space to accommodate various upstream research activities. As some experiments necessitate specialised equipment and spatial designs, having the large footprint with utility support, and flexibility for future expansion will also attract both local and international research teams to the GIC, which can ultimately grow the talent pool of Hong Kong.”]

I would like to make further comments below:

I believe this initiative can cultivate interdisciplinary research collaborations and nurture interdisciplinary talents.

Best regards,
XU JINJIE

I am writing in support of Item A, draft Pok Fu Lam Outline Zoning Plan No. S/H10/22 as gazetted on March 22, 2024 under section 5 of Town Planning Ordinance.

Item A – Rezoning of a site between Pok Fu Lam Road and Victoria Road from “Green Belt” (“GB”), “Residential (Group C)6” and area shown as ‘Road’ to “Other Specified Uses” annotated “Global Innovation Centre” (“OU(Global Innovation Centre)”).

My reasons are as follows:

["The Global Innovation Centre's interdisciplinary approach, which brings together researchers from various fields, will need dedicated space to accommodate various upstream research activities. As some experiments necessitate specialised equipment and spatial designs, having the large footprint with utility support, and flexibility for future expansion will also attract both local and international research teams to the GIC, which can ultimately grow the talent pool of Hong Kong.", "First conceived in the 2021 Policy Address, the Global Innovation Centre supports the National 14th Five-Year Plan and the Hong Kong Innovation and Technology Development Blueprint. I believe that the Global Innovation Centre will provide a transdisciplinary hub for deep technology and basic research, that will enable scientists to tackle some of the world's most pressing challenges, which is also an important impetus for Hong Kong's future economic growth.", "The proposed development will be compatible with the surrounding area by adopting a terraced building design that blends with the topography, while also creating an accessible environment by enhancing pedestrian facilities, attracting talents and providing new impetus to economic activities in the southern district.", "Propelling upstream basic research at the Global Innovation Centre will be beneficial to the entire I&T ecosystem. By creating high-value and highly-skilled jobs, creating synergy across I&T stakeholders, and attracting more global talent and enterprises, the GIC aspires to generate research outcomes that can support technology transfer and commercialisation at universities, research institutes, enterprises, and startups. ", "As part of the city-wide effort to enhance innovation and technology competitiveness, the proposed Global Innovation Centre can create more development opportunities for local scientists, researchers, and aspiring entrepreneurs, thereby promoting I&T development and aligning with strategic government policies of new industrialisation and driving quality economic growth.", "The Global Innovation Centre's location in Pokfulam, with proximity to the Sassoon Road Campus, Queen Mary Hospital, and Cyberport, will create synergy with HKU's existing campuses, forming an "Island Innovation Corridor" that will promote access to talent, research collaboration, and knowledge sharing. There will be enhanced pedestrian connections and landscaped communal space that will also benefit the local community.", "The Global Innovation Centre will provide researchers with the necessary infrastructure to conduct cutting-edge research in quantum science, atomic science, health sciences, artificial intelligence, sustainable energy, and financial technology. It will provide advanced laboratory space, and shared facilities that will enable

researchers to work together with researchers from various disciplines, fostering international collaboration."]

I would like to make further comments below:

As an exciting project, it would further enhance the global impacts of HKU and Hong Kong SAR China.

Best regards,
Jin Lijian
