## Opposition to the Constructing HKU Global Innovation Centre (GIC) in Pok Fu Lam

I object to the Town Planning Board's approval to amend the Pok Fu Lam Outline Zoning Plan No. S/H10/22 for the following reasons:

### 1. Inappropriate location

It is in a green belt close to residential zones: Baguio Villas and other properties in the vicinity, e.g. Woodbury Court & Sassoon Road communities. Upon completion, many residents in Baguio Villa will be directly facing superstructures or vehicular access roads from a stone-throw away. Those facilities, e.g. nitrogen tank and laboratories might have potential danger to nearby residents when in operation. These facilities should never be built close to residential areas.

For the importance of interacting upstream, midstream and downstream innovative concepts and ideas, this GIC should be located in San Tin Technopole for the best interest of Hong Kong. It is clearly a better alternative.

### 2. Very high cost

The location is at a vegetated steep slope site. The massive difficult site formation works will be hugely expensive, funded unnecessarily by taxpayers. It will be more cost effective to build the GIC in other locations, e.g. San Tin Technopole.

The current plan is to take a significantly difficult and longer path to pursue the project. It is not helping the objective to fast-track Hong Kong's technology development.

### 3. Large scale and massive tree removal

The scale of the GIC is so vast that it is proposed to span around 500m from Sassoon Road to Baguio Villa. It requires removing some 2000 trees which will seriously degrade the existing landscape and ecological value of this land. It will also cause a large number of birds, butterflies and other animals to lose their habitat, seriously destroying the nature and ecology. It is also not in line with the government's carbon reduction goals.

### 4. Nuisance caused and damage to the environment during construction period

The noise, dust caused by large construction machines, traffic and other factors will be unbearable in this primarily residential areas during the construction period of this massive project. Moreover, it is still unknown how long the construction work will last. During the HKU briefing, HKU's representatives failed to answer the question of when the project would be completed.

In addition, there will also be many construction projects in nearby places, such as the HKU campus redevelopment project, Wah Fu Estate redevelopment project, Cyberport expansion project, Queen

Mary Hospital redevelopment project, etc. The road traffic demand in this area will be huge. Traffic congestion is expected to deteriorate severely. In the event of an emergency such as flooding or fire incident, emergency rescue vehicles will be unable to reach promptly.

**5. Huge increase in traffic flow**

Serious traffic jam will be expected on Victoria Road and Pok Fu Lam Road during the construction period and after completion. The residents in this district, construction workers and future scientific research personnel and staff after completion will rely on driving and taking public transportation as there is no MTR. Therefore, Pok Fu Lam District will once again face severe traffic congestion every day.

In addition, according to HKU's estimation, there will be around 15,000 users in the GIC in the future. Even if not all of them will use public transportation, it is certain that this will greatly increase the load of the current insufficient public transportation.

**6. Lack of prior proper consultation**

HKU failed to comply with its commitment to the Town Planning Board, which requires prior consultation. HKU did not contact the Incorporated Owners and residents of Baguio Villa and other residential properties in Pok Fu Lam area. Therefore, it comes as a shock to Baguio Villa residents when they became aware of this issue after being notified by a former District Councilor, only less than 10 days before the deadline of consultation, HKU and the Southern District Council failed completely to conduct any prior consultation at all, ignoring residents' opinion and impact on them.

**7. Weakening Slope Stability**

A fatal landslide incident from the slope next to the residential block in Baguio Villa occurred many years ago. The large scale construction work will likely weaken the slope's stability greatly. There is a real risk that it may endanger residents' lives.

**Conclusion**

Residents of Pok Fu Lam District are not opposed to the government's and our country's plans to vigorously promote innovation, technology and scientific research. However, HKU's proposal of selecting a large green belt slope that is not suitable for large-scale development as the location of the innovation center is obviously a wrong choice.

It is in a green belt close to residential zones: Baguio Villas and other properties in the vicinity, e.g. Woodbury Court & Sassoon Road communities. Upon completion, many residents in Baguio Villa will be directly facing superstructures or vehicular access roads from a stone-throw away. Those facilities, e.g. nitrogen tank and laboratories might have potential danger to nearby residents when in operation. These facilities should never be built close to residential areas.

For the importance of interacting upstream, midstream and downstream innovative concepts and ideas, this GIC should be located in San Tin Technopole for the best interest of Hong Kong. It is clearly a better alternative.

### 2. Very high cost

The location is at a vegetated steep slope site. The massive difficult site formation works will be hugely expensive, funded unnecessarily by taxpayers. It will be more cost effective to build the GIC in other locations, e.g. San Tin Technopole.

The current plan is to take a significantly difficult and longer path to pursue the project. It is not helping the objective to fast-track Hong Kong's technology development.

### 3. Large scale and massive tree removal

The scale of the GIC is so vast that it is proposed to span around 500m from Sassoon Road to Baguio Villa. It requires removing some 2000 trees which will seriously degrade the existing landscape and ecological value of this land. It will also cause a large number of birds, butterflies and other animals to lose their habitat, seriously destroying the nature and ecology. It is also not in line with the government's carbon reduction goals.

### 4. Nuisance caused and damage to the environment during construction period

The noise, dust caused by large construction machines, traffic and other factors will be unbearable in this primarily residential areas during the construction period of this massive project. Moreover, it is still unknown how long the construction work will last. During the HKU briefing, HKU's representatives failed to answer the question of when the project would be completed.

In addition, there will also be many construction projects in nearby places, such as the HKU campus redevelopment project, Wah Fu Estate redevelopment project, Cyberport expansion project, Queen

Mary Hospital redevelopment project, etc. The road traffic demand in this area will be huge. Traffic congestion is expected to deteriorate severely. In the event of an emergency such as flooding or fire incident, emergency rescue vehicles will be unable to reach promptly.

**5. Huge increase in traffic flow**

Serious traffic jam will be expected on Victoria Road and Pok Fu Lam Road during the construction period and after completion. The residents in this district, construction workers and future scientific research personnel and staff after completion will rely on driving and taking public transportation as there is no MTR. Therefore, Pok Fu Lam District will once again face severe traffic congestion every day.

In addition, according to HKU's estimation, there will be around 15,000 users in the GIC in the future. Even if not all of them will use public transportation, it is certain that this will greatly increase the load of the current insufficient public transportation.

**6. Lack of prior proper consultation**

HKU failed to comply with its commitment to the Town Planning Board, which requires prior consultation. HKU did not contact the Incorporated Owners and residents of Baguio Villa and other residential properties in Pok Fu Lam area. Therefore, it comes as a shock to Baguio Villa residents when they became aware of this issue after being notified by a former District Councilor, only less than 10 days before the deadline of consultation, HKU and the Southern District Council failed completely to conduct any prior consultation at all, ignoring residents' opinion and impact on them.

**7. Weakening Slope Stability**

A fatal landslide incident from the slope next to the residential block in Baguio Villa occurred many years ago. The large scale construction work will likely weaken the slope's stability greatly. There is a real risk that it may endanger residents' lives.

**Conclusion**

Residents of Pok Fu Lam District are not opposed to the government's and our country's plans to vigorously promote innovation, technology and scientific research. However, HKU's proposal of selecting a large green belt slope that is not suitable for large-scale development as the location of the innovation center is obviously a wrong choice.

Upon completion, many residents in Baguio Villa will be directly facing superstructures or vehicular access roads from a stone-throw away. Those facilities, e.g. nitrogen tank and laboratories might have potential danger to nearby residents when in operation. These facilities should never be built close to residential areas.

For the importance of interacting upstream, midstream and downstream innovative concepts and ideas, this GIC should be located in San Tin Technopole for the best interest of Hong Kong. It is clearly a better alternative.

### **2. Very high cost**

The location is at a vegetated steep slope site. The massive difficult site formation works will be hugely expensive, funded unnecessarily by taxpayers. It will be more cost effective to build the GIC in other locations, e.g. San Tin Technopole.

The current plan is to take a significantly difficult and longer path to pursue the project. It is not helping the objective to fast-track Hong Kong's technology development.

### **3. Large scale and massive tree removal**

The scale of the GIC is so vast that it is proposed to span around 500m from Sassoon Road to Baguio Villa. It requires removing some 2000 trees which will seriously degrade the existing landscape and ecological value of this land. It will also cause a large number of birds, butterflies and other animals to lose their habitat, seriously destroying the nature and ecology. It is also not in line with the government's carbon reduction goals.

### **4. Nuisance caused and damage to the environment during construction period**

The noise, dust caused by large construction machines, traffic and other factors will be unbearable in this primarily residential areas during the construction period of this massive project. Moreover, it is still unknown how long the construction work will last. During the HKU briefing, HKU's representatives failed to answer the question of when the project would be completed.

In addition, there will also be many construction projects in nearby places, such as the HKU campus redevelopment project, Wah Fu Estate redevelopment project, Cyberport expansion project, Queen

Mary Hospital redevelopment project, etc. The road traffic demand in this area will be huge. Traffic congestion is expected to deteriorate severely. In the event of an emergency such as flooding or fire incident, emergency rescue vehicles will be unable to reach promptly.

**5. Huge increase in traffic flow**

Serious traffic jam will be expected on Victoria Road and Pok Fu Lam Road during the construction period and after completion. The residents in this district, construction workers and future scientific research personnel and staff after completion will rely on driving and taking public transportation as there is no MTR. Therefore, Pok Fu Lam District will once again face severe traffic congestion every day.

In addition, according to HKU's estimation, there will be around 15,000 users in the GIC in the future. Even if not all of them will use public transportation, it is certain that this will greatly increase the load of the current insufficient public transportation.

**6. Lack of prior proper consultation**

HKU failed to comply with its commitment to the Town Planning Board, which requires prior consultation. HKU did not contact the Incorporated Owners and residents of Baguio Villa and other residential properties in Pok Fu Lam area. Therefore, it comes as a shock to Baguio Villa residents when they became aware of this issue after being notified by a former District Councilor, only less than 10 days before the deadline of consultation, HKU and the Southern District Council failed completely to conduct any prior consultation at all, ignoring residents' opinion and impact on them.

**7. Weakening Slope Stability**

A fatal landslide incident from the slope next to the residential block in Baguio Villa occurred many years ago. The large scale construction work will likely weaken the slope's stability greatly. There is a real risk that it may endanger residents' lives.

**Conclusion**

Residents of Pok Fu Lam District are not opposed to the government's and our country's plans to vigorously promote innovation, technology and scientific research. However, HKU's proposal of selecting a large green belt slope that is not suitable for large-scale development as the location of the innovation center is obviously a wrong choice.

## Opposition to the Constructing HKU Global Innovation Centre (GIC) in Pok Fu Lam

I object to the Town Planning Board's approval to amend the Pok Fu Lam Outline Zoning Plan No. S/H10/22 for the following reasons:

### 1. Inappropriate location

It is in a green belt close to residential zones: Baguio Villas and other properties in the vicinity, e.g. Woodbury Court & Sassoon Road communities. Upon completion, many residents in Baguio Villa will be directly facing superstructures or vehicular access roads from a stone-throw away. Those facilities, e.g. nitrogen tank and laboratories might have potential danger to nearby residents when in operation. These facilities should never be built close to residential areas.

For the importance of interacting upstream, midstream and downstream innovative concepts and ideas, this GIC should be located in San Tin Technopole for the best interest of Hong Kong. It is clearly a better alternative.

### 2. Very high cost

The location is at a vegetated steep slope site. The massive difficult site formation works will be hugely expensive, funded unnecessarily by taxpayers. It will be more cost effective to build the GIC in other locations, e.g. San Tin Technopole.

The current plan is to take a significantly difficult and longer path to pursue the project. It is not helping the objective to fast-track Hong Kong's technology development.

### 3. Large scale and massive tree removal

The scale of the GIC is so vast that it is proposed to span around 500m from Sassoon Road to Baguio Villa. It requires removing some 2000 trees which will seriously degrade the existing landscape and ecological value of this land. It will also cause a large number of birds, butterflies and other animals to lose their habitat, seriously destroying the nature and ecology. It is also not in line with the government's carbon reduction goals.

### 4. Nuisance caused and damage to the environment during construction period

## Opposition to the Constructing HKU Global Innovation Centre (GIC) in Pok Fu Lam

I object to the Town Planning Board's approval to amend the Pok Fu Lam Outline Zoning Plan No. S/H10/22 for the following reasons:

### 1. Inappropriate location

It is in a green belt close to residential zones: Baguio Villas and other properties in the vicinity, e.g. Woodbury Court & Sassoon Road communities. Upon completion, many residents in Baguio Villa will be directly facing superstructures or vehicular access roads from a stone-throw away. Those facilities, e.g. nitrogen tank and laboratories might have potential danger to nearby residents when in operation. These facilities should never be built close to residential areas.

For the importance of interacting upstream, midstream and downstream innovative concepts and ideas, this GIC should be located in San Tin Technopole for the best interest of Hong Kong. It is clearly a better alternative.

### 2. Very high cost

The location is at a vegetated steep slope site. The massive difficult site formation works will be hugely expensive, funded unnecessarily by taxpayers. It will be more cost effective to build the GIC in other locations, e.g. San Tin Technopole.

The current plan is to take a significantly difficult and longer path to pursue the project. It is not helping the objective to fast-track Hong Kong's technology development.

### 3. Large scale and massive tree removal

The scale of the GIC is so vast that it is proposed to span around 500m from Sassoon Road to Baguio Villa. It requires removing some 2000 trees which will seriously degrade the existing landscape and ecological value of this land. It will also cause a large number of birds, butterflies and other animals to lose their habitat, seriously destroying the nature and ecology. It is also not in line with the government's carbon reduction goals.

### 4. Nuisance caused and damage to the environment during construction period

The noise, dust caused by large construction machines, traffic and other factors will be unbearable in this primarily residential areas during the construction period of this massive project. Moreover, it is still unknown how long the construction work will last. During the HKU briefing, HKU's representatives failed to answer the question of when the project would be completed.

In addition, there will also be many construction projects in nearby places, such as the HKU campus redevelopment project, Wah Fu Estate redevelopment project, Cyberport expansion project, Queen

Mary Hospital redevelopment project, etc. The road traffic demand in this area will be huge. Traffic congestion is expected to deteriorate severely. In the event of an emergency such as flooding or fire incident, emergency rescue vehicles will be unable to reach promptly.

**5. Huge increase in traffic flow**

Serious traffic jam will be expected on Victoria Road and Pok Fu Lam Road during the construction period and after completion. The residents in this district, construction workers and future scientific research personnel and staff after completion will rely on driving and taking public transportation as there is no MTR. Therefore, Pok Fu Lam District will once again face severe traffic congestion every day.

In addition, according to HKU's estimation, there will be around 15,000 users in the GIC in the future. Even if not all of them will use public transportation, it is certain that this will greatly increase the load of the current insufficient public transportation.

**6. Lack of prior proper consultation**

HKU failed to comply with its commitment to the Town Planning Board, which requires prior consultation. HKU did not contact the Incorporated Owners and residents of Baguio Villa and other residential properties in Pok Fu Lam area. Therefore, it comes as a shock to Baguio Villa residents when they became aware of this issue after being notified by a former District Councilor, only less than 10 days before the deadline of consultation, HKU and the Southern District Council failed completely to conduct any prior consultation at all, ignoring residents' opinion and impact on them.

**7. Weakening Slope Stability**

A fatal landslide incident from the slope next to the residential block in Baguio Villa occurred many years ago. The large scale construction work will likely weaken the slope's stability greatly. There is a real risk that it may endanger residents' lives.

**Conclusion**

Residents of Pok Fu Lam District are not opposed to the government's and our country's plans to vigorously promote innovation, technology and scientific research. However, HKU's proposal of selecting a large green belt slope that is not suitable for large-scale development as the location of the innovation center is obviously a wrong choice.

## Opposition to the Constructing HKU Global Innovation Centre (GIC) in Pok Fu Lam

I object to the Town Planning Board's approval to amend the Pok Fu Lam Outline Zoning Plan No. S/H10/22 for the following reasons:

### 1. Inappropriate location

It is in a green belt close to residential zones: Baguio Villas and other properties in the vicinity, e.g. Woodbury Court & Sassoon Road communities. Upon completion, many residents in Baguio Villa will be directly facing superstructures or vehicular access roads from a stone-throw away. Those facilities, e.g. nitrogen tank and laboratories might have potential danger to nearby residents when in operation. These facilities should never be built close to residential areas.

For the importance of interacting upstream, midstream and downstream innovative concepts and ideas, this GIC should be located in San Tin Technopole for the best interest of Hong Kong. It is clearly a better alternative.

### 2. Very high cost

The location is at a vegetated steep slope site. The massive difficult site formation works will be hugely expensive, funded unnecessarily by taxpayers. It will be more cost effective to build the GIC in other locations, e.g. San Tin Technopole.

The current plan is to take a significantly difficult and longer path to pursue the project. It is not helping the objective to fast-track Hong Kong's technology development.

### 3. Large scale and massive tree removal

## Opposition to the Constructing HKU Global Innovation Centre (GIC) in Pok Fu Lam

I object to the Town Planning Board's approval to amend the Pok Fu Lam Outline Zoning Plan No. S/H10/22 for the following reasons:

### 1. Inappropriate location

It is in a green belt close to residential zones: Baguio Villas and other properties in the vicinity, e.g. Woodbury Court & Sassoon Road communities. Upon completion, many residents in Baguio Villa will be directly facing superstructures or vehicular access roads from a stone-throw away. Those facilities, e.g. nitrogen tank and laboratories might have potential danger to nearby residents when in operation. These facilities should never be built close to residential areas.

For the importance of interacting upstream, midstream and downstream innovative concepts and ideas, this GIC should be located in San Tin Technopole for the best interest of Hong Kong. It is clearly a better alternative.

### 2. Very high cost

The location is at a vegetated steep slope site. The massive difficult site formation works will be hugely expensive, funded unnecessarily by taxpayers. It will be more cost effective to build the GIC in other locations, e.g. San Tin Technopole.

The current plan is to take a significantly difficult and longer path to pursue the project. It is not helping the objective to fast-track Hong Kong's technology development.

### 3. Large scale and massive tree removal

The scale of the GIC is so vast that it is proposed to span around 500m from Sassoon Road to Baguio Villa. It requires removing some 2000 trees which will seriously degrade the existing landscape and ecological value of this land. It will also cause a large number of birds, butterflies and other animals to lose their habitat, seriously destroying the nature and ecology. It is also not in line with the government's carbon reduction goals.

### 4. Nuisance caused and damage to the environment during construction period

The noise, dust caused by large construction machines, traffic and other factors will be unbearable in this primarily residential areas during the construction period of this massive project. Moreover, it is still unknown how long the construction work will last. During the HKU briefing, HKU's representatives failed to answer the question of when the project would be completed.

In addition, there will also be many construction projects in nearby places, such as the HKU campus redevelopment project, Wah Fu Estate redevelopment project, Cyberport expansion project, Queen

Mary Hospital redevelopment project, etc. The road traffic demand in this area will be huge. Traffic congestion is expected to deteriorate severely. In the event of an emergency such as flooding or fire incident, emergency rescue vehicles will be unable to reach promptly.

**5. Huge increase in traffic flow**

Serious traffic jam will be expected on Victoria Road and Pok Fu Lam Road during the construction period and after completion. The residents in this district, construction workers and future scientific research personnel and staff after completion will rely on driving and taking public transportation as there is no MTR. Therefore, Pok Fu Lam District will once again face severe traffic congestion every day.

In addition, according to HKU's estimation, there will be around 15,000 users in the GIC in the future. Even if not all of them will use public transportation, it is certain that this will greatly increase the load of the current insufficient public transportation.

**6. Lack of prior proper consultation**

HKU failed to comply with its commitment to the Town Planning Board, which requires prior consultation. HKU did not contact the Incorporated Owners and residents of Baguio Villa and other residential properties in Pok Fu Lam area. Therefore, it comes as a shock to Baguio Villa residents when they became aware of this issue after being notified by a former District Councilor, only less than 10 days before the deadline of consultation, HKU and the Southern District Council failed completely to conduct any prior consultation at all, ignoring residents' opinion and impact on them.

**7. Weakening Slope Stability**

A fatal landslide incident from the slope next to the residential block in Baguio Villa occurred many years ago. The large scale construction work will likely weaken the slope's stability greatly. There is a real risk that it may endanger residents' lives.

**Conclusion**

Residents of Pok Fu Lam District are not opposed to the government's and our country's plans to vigorously promote innovation, technology and scientific research. However, HKU's proposal of selecting a large green belt slope that is not suitable for large-scale development as the location of the innovation center is obviously a wrong choice.

## **Opposition to the Constructing HKU Global Innovation Centre (GIC) in Pok Fu Lam**

I object to the Town Planning Board's approval to amend the Pok Fu Lam Outline Zoning Plan No. S/H10/22 for the following reasons:

### **1. Inappropriate location**

It is in a green belt close to residential zones: Baguio Villas and other properties in the vicinity, e.g. Woodbury Court & Sassoon Road communities. Upon completion, many residents in Baguio Villa will be directly facing superstructures or vehicular access roads from a stone-throw away. Those facilities, e.g. nitrogen tank and laboratories might have potential danger to nearby residents when in operation. These facilities should never be built close to residential areas.

For the importance of interacting upstream, midstream and downstream innovative concepts and ideas, this GIC should be located in San Tin Technopole for the best interest of Hong Kong. It is clearly a better alternative.

### **2. Very high cost**

The location is at a vegetated steep slope site. The massive difficult site formation works will be hugely expensive, funded unnecessarily by taxpayers. It will be more cost effective to build the GIC in other locations, e.g. San Tin Technopole.

The current plan is to take a significantly difficult and longer path to pursue the project. It is not helping the objective to fast-track Hong Kong's technology development.

### **3. Large scale and massive tree removal**

The scale of the GIC is so vast that it is proposed to span around 500m from Sassoon Road to Baguio Villa. It requires removing some 2000 trees which will seriously degrade the existing landscape and ecological value of this land. It will also cause a large number of birds, butterflies and other animals to lose their habitat, seriously destroying the nature and ecology. It is also not in line with the government's carbon reduction goals.

### **4. Nuisance caused and damage to the environment during construction period**

The noise, dust caused by large construction machines, traffic and other factors will be unbearable in this primarily residential areas during the construction period of this massive project. Moreover, it is still unknown how long the construction work will last. During the HKU briefing, HKU's representatives failed to answer the question of when the project would be completed.

In addition, there will also be many construction projects in nearby places, such as the HKU campus redevelopment project, Wah Fu Estate redevelopment project, Cyberport expansion project, Queen

Mary Hospital redevelopment project, etc. The road traffic demand in this area will be huge. Traffic congestion is expected to deteriorate severely. In the event of an emergency such as flooding or fire incident, emergency rescue vehicles will be unable to reach promptly.

**5. Huge increase in traffic flow**

Serious traffic jam will be expected on Victoria Road and Pok Fu Lam Road during the construction period and after completion. The residents in this district, construction workers and future scientific research personnel and staff after completion will rely on driving and taking public transportation as there is no MTR. Therefore, Pok Fu Lam District will once again face severe traffic congestion every day.

In addition, according to HKU's estimation, there will be around 15,000 users in the GIC in the future. Even if not all of them will use public transportation, it is certain that this will greatly increase the load of the current insufficient public transportation.

**6. Lack of prior proper consultation**

HKU failed to comply with its commitment to the Town Planning Board, which requires prior consultation. HKU did not contact the Incorporated Owners and residents of Baguio Villa and other residential properties in Pok Fu Lam area. Therefore, it comes as a shock to Baguio Villa residents when they became aware of this issue after being notified by a former District Councilor, only less than 10 days before the deadline of consultation, HKU and the Southern District Council failed completely to conduct any prior consultation at all, ignoring residents' opinion and impact on them.

**7. Weakening Slope Stability**

A fatal landslide incident from the slope next to the residential block in Baguio Villa occurred many years ago. The large scale construction work will likely weaken the slope's stability greatly. There is a real risk that it may endanger residents' lives.

**Conclusion**

Residents of Pok Fu Lam District are not opposed to the government's and our country's plans to vigorously promote innovation, technology and scientific research. However, HKU's proposal of selecting a large green belt slope that is not suitable for large-scale development as the location of the innovation center is obviously a wrong choice.

## Opposition to the Constructing HKU Global Innovation Centre (GIC) in Pok Fu Lam

I object to the Town Planning Board's approval to amend the Pok Fu Lam Outline Zoning Plan No. S/H10/22 for the following reasons:

### 1. Inappropriate location

It is in a green belt close to residential zones: Baguio Villas and other properties in the vicinity, e.g. Woodbury Court & Sassoon Road communities. Upon completion, many residents in Baguio Villa will be directly facing superstructures or vehicular access roads from a stone-throw away. Those facilities, e.g. nitrogen tank and laboratories might have potential danger to nearby residents when in operation. These facilities should never be built close to residential areas.

For the importance of interacting upstream, midstream and downstream innovative concepts and ideas, this GIC should be located in San Tin Technopole for the best interest of Hong Kong. It is clearly a better alternative.

### 2. Very high cost

The location is at a vegetated steep slope site. The massive difficult site formation works will be hugely expensive, funded unnecessarily by taxpayers. It will be more cost effective to build the GIC in other locations, e.g. San Tin Technopole.

The current plan is to take a significantly difficult and longer path to pursue the project. It is not helping the objective to fast-track Hong Kong's technology development.

### 3. Large scale and massive tree removal

The scale of the GIC is so vast that it is proposed to span around 500m from Sassoon Road to Baguio Villa. It requires removing some 2000 trees which will seriously degrade the existing landscape and ecological value of this land. ## Opposition to the Constructing HKU Global Innovation Centre (GIC) in Pok Fu Lam

I object to the Town Planning Board's approval to amend the Pok Fu Lam Outline Zoning Plan No. S/H10/22 for the following reasons:

### 1. Inappropriate location

It is in a green belt close to residential zones: Baguio Villas and other properties in the vicinity, e.g. Woodbury Court & Sassoon Road communities. Upon completion, many residents in Baguio Villa will be directly facing superstructures or vehicular access roads from a stone-throw away. Those facilities, e.g. nitrogen tank and laboratories might have potential danger to nearby residents when in operation. These facilities should never be built close to residential areas.

For the importance of interacting upstream, midstream and downstream innovative concepts and ideas, this GIC should be located in San Tin Technopole for the best interest of Hong Kong. It is clearly a better alternative.

### 2. Very high cost

The location is at a vegetated steep slope site. The massive difficult site formation works will be hugely expensive, funded unnecessarily by taxpayers. It will be more cost effective to build the GIC in other locations, e.g. San Tin Technopole.

The current plan is to take a significantly difficult and longer path to pursue the project. It is not helping the objective to fast-track Hong Kong's technology development.

### 3. Large scale and massive tree removal

The scale of the GIC is so vast that it is proposed to span around 500m from Sassoon Road to Baguio Villa. It requires removing some 2000 trees which will seriously degrade the existing landscape and ecological value of this land. It will also cause a large number of birds, butterflies and other animals to lose their habitat, seriously destroying the nature and ecology. It is also not in line with the government's carbon reduction goals.

### 4. Nuisance caused and damage to the environment during construction period

The noise, dust caused by large construction machines, traffic and other factors will be unbearable in this primarily residential areas during the construction period of this massive project. Moreover, it is still unknown how long the construction work will last. During the HKU briefing, HKU's representatives failed to answer the question of when the project would be completed.

In addition, there will also be many construction projects in nearby places, such as the HKU campus redevelopment project, Wah Fu Estate redevelopment project, Cyberport expansion project, Queen

Mary Hospital redevelopment project, etc. The road traffic demand in this area will be huge. Traffic congestion is expected to deteriorate severely. In the event of an emergency such as flooding or fire incident, emergency rescue vehicles will be unable to reach promptly.

**5. Huge increase in traffic flow**

Serious traffic jam will be expected on Victoria Road and Pok Fu Lam Road during the construction period and after completion. The residents in this district, construction workers and future scientific research personnel and staff after completion will rely on driving and taking public transportation as there is no MTR. Therefore, Pok Fu Lam District will once again face severe traffic congestion every day.

In addition, according to HKU's estimation, there will be around 15,000 users in the GIC in the future. Even if not all of them will use public transportation, it is certain that this will greatly increase the load of the current insufficient public transportation.

**6. Lack of prior proper consultation**

HKU failed to comply with its commitment to the Town Planning Board, which requires prior consultation. HKU did not contact the Incorporated Owners and residents of Baguio Villa and other residential properties in Pok Fu Lam area. Therefore, it comes as a shock to Baguio Villa residents when they became aware of this issue after being notified by a former District Councilor, only less than 10 days before the deadline of consultation, HKU and the Southern District Council failed completely to conduct any prior consultation at all, ignoring residents' opinion and impact on them.

**7. Weakening Slope Stability**

A fatal landslide incident from the slope next to the residential block in Baguio Villa occurred many years ago. The large scale construction work will likely weaken the slope's stability greatly. There is a real risk that it may endanger residents' lives.

**Conclusion**

Residents of Pok Fu Lam District are not opposed to the government's and our country's plans to vigorously promote innovation, technology and scientific research. However, HKU's proposal of selecting a large green belt slope that is not suitable for large-scale development and innovation of the innovation center is obviously a wrong choice.

## **Opposition to the Constructing HKU Global Innovation Centre (GIC) in Pok Fu Lam**

I object to the Town Planning Board's approval to amend the Pok Fu Lam Outline Zoning Plan No. S/H10/22 for the following reasons:

### **1. Inappropriate location**

It is in a green belt close to residential zones: Baguio Villas and other properties in the vicinity, e.g. Woodbury Court & Sassoon Road communities. Upon completion, many residents in Baguio Villa will be directly facing superstructures or vehicular access roads from a stone-throw away. Those facilities, e.g. nitrogen tank and laboratories might have potential danger to nearby residents when in operation. These facilities should never be built close to residential areas.

For the importance of interacting upstream, midstream and downstream innovative concepts and ideas, this GIC should be located in San Tin Technopole for the best interest of Hong Kong. It is clearly a better alternative.

### **2. Very high cost**

The location is at a vegetated steep slope site. The massive difficult site formation works will be hugely expensive, funded unnecessarily by taxpayers. It will be more cost effective to build the GIC in other locations, e.g. San Tin Technopole.

The current plan is to take a significantly difficult and longer path to pursue the project. It is not helping the objective to fast-track Hong Kong's technology development.

### **3. Large scale and massive tree removal**

The scale of the GIC is so vast that it is proposed to span around 500m from Sassoon Road to Baguio Villa. It requires removing some 2000 trees which will seriously degrade the existing landscape and ecological value of this land. It will also cause a large number of birds, butterflies and other animals to lose their habitat, seriously destroying the nature and ecology. It is also not in line with the government's carbon reduction goals.

### **4. Nuisance caused and damage to the environment during construction period**

The noise, dust caused by large construction machines, traffic and other factors will be unbearable in this primarily residential areas during the construction period of this massive project. ## Opposition to the Constructing HKU Global Innovation Centre (GIC) in Pok Fu Lam

I object to the Town Planning Board's approval to amend the Pok Fu Lam Outline Zoning Plan No. S/H10/22 for the following reasons:

### 1. Inappropriate location

It is in a green belt close to residential zones: Baguio Villas and other properties in the vicinity, e.g. Woodbury Court & Sassoon Road communities. Upon completion, many residents in Baguio Villa will be directly facing superstructures or vehicular access roads from a stone-throw away. Those facilities, e.g. nitrogen tank and laboratories might have potential danger to nearby residents when in operation. These facilities should never be built close to residential areas.

For the importance of interacting upstream, midstream and downstream innovative concepts and ideas, this GIC should be located in San Tin Technopole for the best interest of Hong Kong. It is clearly a better alternative.

### 2. Very high cost

The location is at a vegetated steep slope site. The massive difficult site formation works will be hugely expensive, funded unnecessarily by taxpayers. It will be more cost effective to build the GIC in other locations, e.g. San Tin Technopole.

The current plan is to take a significantly difficult and longer path to pursue the project. It is not helping the objective to fast-track Hong Kong's technology development.

### 3. Large scale and massive tree removal

The scale of the GIC is so vast that it is proposed to span around 500m from Sassoon Road to Baguio Villa. It requires removing some 2000 trees which will seriously degrade the existing landscape and ecological value of this land. It will also cause a large number of birds, butterflies and other animals to lose their habitat, seriously destroying the nature and ecology. It is also not in line with the government's carbon reduction goals.

### 4. Nuisance caused and damage to the environment during construction period

The noise, dust caused by large construction machines, traffic and other factors will be unbearable in this primarily residential areas during the construction period of this massive project. Moreover, it is still unknown how long the construction work will last. During the HKU briefing, HKU's representatives failed to answer the question of when the project would be completed.

In addition, there will also be many construction projects in nearby places, such as the HKU campus redevelopment project, Wah Fu Estate redevelopment project, Cyberport expansion project, Queen

Mary Hospital redevelopment project, etc. The road traffic demand in this area will be huge. Traffic congestion is expected to deteriorate severely. In the event of an emergency such as flooding or fire incident, emergency rescue vehicles will be unable to reach promptly.

**5. Huge increase in traffic flow**

Serious traffic jam will be expected on Victoria Road and Pok Fu Lam Road during the construction period and after completion. The residents in this district, construction workers and future scientific research personnel and staff after completion will rely on driving and taking public transportation as there is no MTR. Therefore, Pok Fu Lam District will once again face severe traffic congestion every day.

In addition, according to HKU's estimation, there will be around 15,000 users in the GIC in the future. Even if not all of them will use public transportation, it is certain that this will greatly increase the load of the current insufficient public transportation.

**6. Lack of prior proper consultation**

HKU failed to comply with its commitment to the Town Planning Board, which requires prior consultation. HKU did not contact the Incorporated Owners and residents of Baguio Villa and other residential properties in Pok Fu Lam area. Therefore, it comes as a shock to Baguio Villa residents when they became aware of this issue after being notified by a former District Councilor, only less than 10 days before the deadline of consultation, HKU and the Southern District Council failed completely to conduct any prior consultation at all, ignoring residents' opinion and impact on them.

**7. Weakening Slope Stability**

A fatal landslide incident from the slope next to the residential block in Baguio Villa occurred many years ago. The large scale construction work will likely weaken the slope's stability greatly. There is a real risk that it may endanger residents' lives.

**Conclusion**

Residents of Pok Fu Lam District are not opposed to the government's and our country's plans to vigorously promote innovation, technology and scientific research. However, HKU's proposal of selecting a large green belt slope that is not suitable for large-scale development as the location of the innovation center is obviously a wrong choice.

## Opposition to the Constructing HKU Global Innovation Centre (GIC) in Pok Fu Lam

I object to the Town Planning Board's approval to amend the Pok Fu Lam Outline Zoning Plan No. S/H10/22 for the following reasons:

### 1. Inappropriate location

It is in a green belt close to residential zones: Baguio Villas and other properties in the vicinity, e.g. Woodbury Court & Sassoon Road communities. Upon completion, many residents in Baguio Villa will be directly facing superstructures or vehicular access roads from a stone-throw away. Those facilities, e.g. nitrogen tank and laboratories might have potential danger to nearby residents when in operation. These facilities should never be built close to residential areas.

For the importance of interacting upstream, midstream and downstream innovative concepts and ideas, this GIC should be located in San Tin Technopole for the best interest of Hong Kong. It is clearly a better alternative.

### 2. Very high cost

The location is at a vegetated steep slope site. The massive difficult site formation works will be hugely expensive, funded unnecessarily by taxpayers. It will be more cost effective to build the GIC in other locations, e.g. San Tin Technopole.

The current plan is to take a significantly difficult and longer path to pursue the project. It is not helping the objective to fast-track Hong Kong's technology development.

### 3. Large scale and massive tree removal

The scale of the GIC is so vast that it is proposed to span around 500m from Sassoon Road to Baguio Villa. It requires removing some 2000 trees which will seriously degrade the existing landscape and ecological value of this land. It will also cause a large number of birds, butterflies and other animals to lose their habitat, seriously destroying the nature and ecology. It is also not in line with the government's carbon reduction goals.

### 4. Nuisance caused and damage to the environment during construction period

The noise, dust caused by large construction machines, traffic and other factors will be unbearable in this primarily residential areas during the construction period of this massive project. Moreover, it is still unknown how long the construction work will last. During the HKU briefing, HKU's representatives failed to answer the question of when the project would be completed.

## **Opposition to the Constructing HKU Global Innovation Centre (GIC) in Pok Fu Lam**

I object to the Town Planning Board's approval to amend the Pok Fu Lam Outline Zoning Plan No. S/H10/22 for the following reasons:

### **1. Inappropriate location**

It is in a green belt close to residential zones: Baguio Villas and other properties in the vicinity, e.g. Woodbury Court & Sassoon Road communities. Upon completion, many residents in Baguio Villa will be directly facing superstructures or vehicular access roads from a stone-throw away. Those facilities, e.g. nitrogen tank and laboratories might have potential danger to nearby residents when in operation. These facilities should never be built close to residential areas.

For the importance of interacting upstream, midstream and downstream innovative concepts and ideas, this GIC should be located in San Tin Technopole for the best interest of Hong Kong. It is clearly a better alternative.

### **2. Very high cost**

The location is at a vegetated steep slope site. The massive difficult site formation works will be hugely expensive, funded unnecessarily by taxpayers. It will be more cost effective to build the GIC in other locations, e.g. San Tin Technopole.

The current plan is to take a significantly difficult and longer path to pursue the project. It is not helping the objective to fast-track Hong Kong's technology development.

### **3. Large scale and massive tree removal**

The scale of the GIC is so vast that it is proposed to span around 500m from Sassoon Road to Baguio Villa. It requires removing some 2000 trees which will seriously degrade the existing landscape and ecological value of this land. It will also cause a large number of birds, butterflies and other animals to lose their habitat, seriously destroying the nature and ecology. It is also not in line with the government's carbon reduction goals.

### **4. Nuisance caused and damage to the environment during construction period**

The noise, dust caused by large construction machines, traffic and other factors will be unbearable in this primarily residential areas during the construction period of this massive project. Moreover, it is still unknown how long the construction work will last. During the HKU briefing, HKU's representatives failed to answer the question of when the project would be completed.

In addition, there will also be many construction projects in nearby places, such as the HKU campus redevelopment project, Wah Fu Estate redevelopment project, Cyberport expansion project, Queen

Mary Hospital redevelopment project, etc. The road traffic demand in this area will be huge. Traffic congestion is expected to deteriorate severely. In the event of an emergency such as flooding or fire incident, emergency rescue vehicles will be unable to reach promptly.

**5. Huge increase in traffic flow**

Serious traffic jam will be expected on Victoria Road and Pok Fu Lam Road during the construction period and after completion. The residents in this district, construction workers and future scientific research personnel and staff after completion will rely on driving and taking public transportation as there is no MTR. Therefore, Pok Fu Lam District will once again face severe traffic congestion every day.

In addition, according to HKU's estimation, there will be around 15,000 users in the GIC in the future. Even if not all of them will use public transportation, it is certain that this will greatly increase the load of the current insufficient public transportation.

**6. Lack of prior proper consultation**

HKU failed to comply with its commitment to the Town Planning Board, which requires prior consultation. HKU did not contact the Incorporated Owners and residents of Baguio Villa and other residential properties in Pok Fu Lam area. Therefore, it comes as a shock to Baguio Villa residents when they became aware of this issue after being notified by a former District Councilor, only less than 10 days before the deadline of consultation, HKU and the Southern District Council failed completely to conduct any prior consultation at all, ignoring residents' opinion and impact on them.

**7. Weakening Slope Stability**

A fatal landslide incident from the slope next to the residential block in Baguio Villa occurred many years ago. The large scale construction work will likely weaken the slope's stability greatly. There is a real risk that it may endanger residents' lives.

**Conclusion**

Residents of Pok Fu Lam District are not opposed to the government's and our country's plans to vigorously promote innovation, technology and scientific research. However, HKU's proposal of selecting a large green belt slope that is not suitable for large-scale development as the location of the innovation center is obviously a wrong choice.

## **Opposition to the Constructing HKU Global Innovation Centre (GIC) in Pok Fu Lam**

I object to the Town Planning Board's approval to amend the Pok Fu Lam Outline Zoning Plan No. S/H10/22 for the following reasons:

### **1. Inappropriate location**

It is in a green belt close to residential zones: Baguio Villas and other properties in the vicinity, e.g. Woodbury Court & Sassoon Road communities. Upon completion, many residents in Baguio Villa will be directly facing superstructures or vehicular access roads from a stone-throw away. Those facilities, e.g. nitrogen tank and laboratories might have potential danger to nearby residents when in operation. These facilities should never be built close to residential areas.

For the importance of interacting upstream, midstream and downstream innovative concepts and ideas, this GIC should be located in San Tin Technopole for the best interest of Hong Kong. It is clearly a better alternative.

### **2. Very high cost**

The location is at a vegetated steep slope site. The massive difficult site formation works will be hugely expensive, funded unnecessarily by taxpayers. It will be more cost effective to build the GIC in other locations, e.g. San Tin Technopole.

The current plan is to take a significantly difficult and longer path to pursue the project. It is not helping the objective to fast-track Hong Kong's technology development.

### **3. Large scale and massive tree removal**

The scale of the GIC is so vast that it is proposed to span around 500m from Sassoon Road to Baguio Villa. It requires removing some 2000 trees which will seriously degrade the existing landscape and ecological value of this land. It will also cause a large number of birds, butterflies and other animals to lose their habitat, seriously destroying the nature and ecology. It is also not in line with the government's carbon reduction goals.

### **4. Nuisance caused and damage to the environment during construction period**

The noise, dust caused by large construction machines, traffic and other factors will be unbearable in this primarily residential areas during the construction period of this massive project. Moreover, it is still unknown how long the construction work will last. During the HKU briefing, HKU's representatives failed to answer the question of when the project would be completed.

In addition, there will also be many construction projects in nearby places, such as the HKU campus redevelopment project, Wah Fu Estate redevelopment project, Cyberport expansion project, Queen

## Opposition to the Constructing HKU Global Innovation Centre (GIC) in Pok Fu Lam

I object to the Town Planning Board's approval to amend the Pok Fu Lam Outline Zoning Plan No. S/H10/22 for the following reasons:

### 1. Inappropriate location

It is in a green belt close to residential zones: Baguio Villas and other properties in the vicinity, e.g. Woodbury Court & Sassoon Road communities. Upon completion, many residents in Baguio Villa will be directly facing superstructures or vehicular access roads from a stone-throw away. Those facilities, e.g. nitrogen tank and laboratories might have potential danger to nearby residents when in operation. These facilities should never be built close to residential areas.

For the importance of interacting upstream, midstream and downstream innovative concepts and ideas, this GIC should be located in San Tin Technopole for the best interest of Hong Kong. It is clearly a better alternative.

### 2. Very high cost

The location is at a vegetated steep slope site. The massive difficult site formation works will be hugely expensive, funded unnecessarily by taxpayers. It will be more cost effective to build the GIC in other locations, e.g. San Tin Technopole.

The current plan is to take a significantly difficult and longer path to pursue the project. It is not helping the objective to fast-track Hong Kong's technology development.

### 3. Large scale and massive tree removal

The scale of the GIC is so vast that it is proposed to span around 500m from Sassoon Road to Baguio Villa. It requires removing some 2000 trees which will seriously degrade the existing landscape and ecological value of this land. It will also cause a large number of birds, butterflies and other animals to lose their habitat, seriously destroying the nature and ecology. It is also not in line with the government's carbon reduction goals.

### 4. Nuisance caused and damage to the environment during construction period

The noise, dust caused by large construction machines, traffic and other factors will be unbearable in this primarily residential areas during the construction period of this massive project. Moreover, it is still unknown how long the construction work will last. During the HKU briefing, HKU's representatives failed to answer the question of when the project would be completed.

In addition, there will also be many construction projects in nearby places, such as the HKU campus redevelopment project, Wah Fu Estate redevelopment project, Cyberport expansion project, Queen

Mary Hospital redevelopment project, etc. The road traffic demand in this area will be huge. Traffic congestion is expected to deteriorate severely. In the event of an emergency such as flooding or fire incident, emergency rescue vehicles will be unable to reach promptly.

**5. Huge increase in traffic flow** *Must need extra public road*  
Serious traffic jam will be expected on Victoria Road and Pok Fu Lam Road during the construction period and after completion. The residents in this district, construction workers and future scientific research personnel and staff after completion will rely on driving and taking public transportation as there is no MTR. Therefore, Pok Fu Lam District will once again face severe traffic congestion every day.

*access between PFL road & Victoria Rd. Sassoon Rd*  
In addition, according to HKU's estimation, there will be around 15,000 users in the GIC in the future. *is too busy.*  
Even if not all of them will use public transportation, it is certain that this will greatly increase the load of the current insufficient public transportation.

*+ need MTR*

**6. Lack of prior proper consultation**

HKU failed to comply with its commitment to the Town Planning Board, which requires prior consultation. HKU did not contact the Incorporated Owners and residents of Baguio Villa and other residential properties in Pok Fu Lam area. Therefore, it comes as a shock to Baguio Villa residents when they became aware of this issue after being notified by a former District Councilor, only less than 10 days before the deadline of consultation, HKU and the Southern District Council failed completely to conduct any prior consultation at all, ignoring residents' opinion and impact on them.

**7. Weakening Slope Stability**

A fatal landslide incident from the slope next to the residential block in Baguio Villa occurred many years ago. The large scale construction work will likely weaken the slope's stability greatly. There is a real risk that it may endanger residents' lives.

**Conclusion**

Residents of Pok Fu Lam District are not opposed to the government's and our country's plans to vigorously promote innovation, technology and scientific research. However, HKU's proposal of selecting a large green belt slope that is not suitable for large-scale development as the location of the innovation center is obviously a wrong choice.

## Opposition to the Constructing HKU Global Innovation Centre (GIC) in Pok Fu Lam

I object to the Town Planning Board's approval to amend the Pok Fu Lam Outline Zoning Plan No. S/H10/22 for the following reasons:

### 1. Inappropriate location

It is in a green belt close to residential zones: Baguio Villas and other properties in the vicinity, e.g. Woodbury Court & Sassoon Road communities. Upon completion, many residents in Baguio Villa will be directly facing superstructures or vehicular access roads from a stone-throw away. Those facilities, e.g. nitrogen tank and laboratories might have potential danger to nearby residents when in operation. These facilities should never be built close to residential areas.

For the importance of interacting upstream, midstream and downstream innovative concepts and ideas, this GIC should be located in San Tin Technopole for the best interest of Hong Kong. It is clearly a better alternative.

### 2. Very high cost

The location is at a vegetated steep slope site. The massive difficult site formation works will be hugely expensive, funded unnecessarily by taxpayers. It will be more cost effective to build the GIC in other locations, e.g. San Tin Technopole.

The current plan is to take a significantly difficult and longer path to pursue the project. It is not helping the objective to fast-track Hong Kong's technology development.

### 3. Large scale and massive tree removal

The scale of the GIC is so vast that it is proposed to span around 500m from Sassoon Road to Baguio Villa. It requires removing some 2000 trees which will seriously degrade the existing landscape and ecological value of this land. It will also cause a large number of birds, butterflies and other animals to lose their habitat, seriously destroying the nature and ecology. It is also not in line with the government's carbon reduction goals.

### 4. Nuisance caused and damage to the environment during construction period

The noise, dust caused by large construction machines, traffic and other factors will be unbearable in this primarily residential areas during the construction period of this massive project. Moreover, it is still unknown how long the construction work will last. During the HKU briefing, HKU's representatives failed to answer the question of when the project would be completed.

In addition, there will also be many construction projects in nearby places, such as the HKU campus redevelopment project, Wah Fu Estate redevelopment project, Cyberport expansion project, Queen

Mary Hospital redevelopment project, etc. The road traffic demand in this area will be huge. Traffic congestion is expected to deteriorate severely. In the event of an emergency such as flooding or fire incident, emergency rescue vehicles will be unable to reach promptly.

**5. Huge increase in traffic flow**

Serious traffic jam will be expected on Victoria Road and Pok Fu Lam Road during the construction period and after completion. The residents in this district, construction workers and future scientific research personnel and staff after completion will rely on driving and taking public transportation as there is no MTR. Therefore, Pok Fu Lam District will once again face severe traffic congestion every day.

*Lobby for MTR*

In addition, according to HKU's estimation, there will be around 15,000 users in the GIC in the future. Even if not all of them will use public transportation, it is certain that this will greatly increase the load of the current insufficient public transportation.

**6. Lack of prior proper consultation**

## Opposition to the Constructing HKU Global Innovation Centre (GIC) in Pok Fu Lam

I object to the Town Planning Board's approval to amend the Pok Fu Lam Outline Zoning Plan No. S/H10/22 for the following reasons:

### 1. Inappropriate location

It is in a green belt close to residential zones: Baguio Villas and other properties in the vicinity, e.g. Woodbury Court & Sassoon Road communities. Upon completion, many residents in Baguio Villa will be directly facing superstructures or vehicular access roads from a stone-throw away. Those facilities, e.g. nitrogen tank and laboratories might have potential danger to nearby residents when in operation. These facilities should never be built close to residential areas.

For the importance of interacting upstream, midstream and downstream innovative concepts and ideas, this GIC should be located in San Tin Technopole for the best interest of Hong Kong. It is clearly a better alternative.

### 2. Very high cost

The location is at a vegetated steep slope site. The massive difficult site formation works will be hugely expensive, funded unnecessarily by taxpayers. It will be more cost effective to build the GIC in other locations, e.g. San Tin Technopole.

The current plan is to take a significantly difficult and longer path to pursue the project. It is not helping the objective to fast-track Hong Kong's technology development.

### 3. Large scale and massive tree removal

The scale of the GIC is so vast that it is proposed to span around 500m from Sassoon Road to Baguio Villa. It requires removing some 2000 trees which will seriously degrade the existing landscape and ecological value of this land. It will also cause a large number of birds, butterflies and other animals to lose their habitat, seriously destroying the nature and ecology. It is also not in line with the government's carbon reduction goals.

### 4. Nuisance caused and damage to the environment during construction period

The noise, dust caused by large construction machines, traffic and other factors will be unbearable in this primarily residential areas during the construction period of this massive project. Moreover, it is still unknown how long the construction work will last. During the HKU briefing, HKU's representatives failed to answer the question of when the project would be completed.

In addition, there will also be many construction projects in nearby places, such as the HKU campus redevelopment project, Wah Fu Estate redevelopment project, Cyberport expansion project, Queen

Mary Hospital redevelopment project, etc. The road traffic demand in this area will be huge. Traffic congestion is expected to deteriorate severely. In the event of an emergency such as flooding or fire incident, emergency rescue vehicles will be unable to reach promptly.

**5. Huge increase in traffic flow**

Serious traffic jam will be expected on Victoria Road and Pok Fu Lam Road during the construction period and after completion. The residents in this district, construction workers and future scientific research personnel and staff after completion will rely on driving and taking public transportation as there is no MTR. Therefore, Pok Fu Lam District will once again face severe traffic congestion every day.

In addition, according to HKU's estimation, there will be around 15,000 users in the GIC in the future. Even if not all of them will use public transportation, it is certain that this will greatly increase the load of the current insufficient public transportation.

**6. Lack of prior proper consultation**

HKU failed to comply with its commitment to the Town Planning Board, which requires prior consultation. HKU did not contact the Incorporated Owners and residents of Baguio Villa and other residential properties in Pok Fu Lam area. Therefore, it comes as a shock to Baguio Villa residents when they became aware of this issue after being notified by a former District Councilor, only less than 10 days before the deadline of consultation, HKU and the Southern District Council failed completely to conduct any prior consultation at all, ignoring residents' opinion and impact on them.

**7. Weakening Slope Stability**

A fatal landslide incident from the slope next to the residential block in Baguio Villa occurred many years ago. The large scale construction work will likely weaken the slope's stability greatly. There is a real risk that it may endanger residents' lives.

**Conclusion**

Residents of Pok Fu Lam District are not opposed to the government's and our country's plans to vigorously promote innovation, technology and scientific research. However, HKU's proposal of selecting a large green belt slope that is not suitable for large-scale development as the location of the innovation center is obviously a wrong choice.

## Opposition to the Constructing HKU Global Innovation Centre (GIC) in Pok Fu Lam

I object to the Town Planning Board's approval to amend the Pok Fu Lam Outline Zoning Plan No. S/H10/22 for the following reasons:

### 1. Inappropriate location

It is in a green belt close to residential zones: Baguio Villas and other properties in the vicinity, e.g. Woodbury Court & Sassoon Road communities. Upon completion, many residents in Baguio Villa will be directly facing superstructures or vehicular access roads from a stone-throw away. Those facilities, e.g. nitrogen tank and laboratories might have potential danger to nearby residents when in operation. These facilities should never be built close to residential areas.

For the importance of interacting upstream, midstream and downstream innovative concepts and ideas, this GIC should be located in San Tin Technopole for the best interest of Hong Kong. It is clearly a better alternative.

### 2. Very high cost

The location is at a vegetated steep slope site. The massive difficult site formation works will be hugely expensive, funded unnecessarily by taxpayers. It will be more cost effective to build the GIC in other locations, e.g. San Tin Technopole.

The current plan is to take a significantly difficult and longer path to pursue the project. It is not helping the objective to fast-track Hong Kong's technology development.

### 3. Large scale and massive tree removal

The scale of the GIC is so vast that it is proposed to span around 500m from Sassoon Road to Baguio Villa. It requires removing some 2000 trees which will seriously degrade the existing landscape and ecological value of this land. It will also cause a large number of birds, butterflies and other animals to lose their habitat, seriously destroying the nature and ecology. It is also not in line with the government's carbon reduction goals.

### 4. Nuisance caused and damage to the environment during construction period

The noise, dust caused by large construction machines, traffic and other factors will be unbearable in this primarily residential areas during the construction period of this massive project. Moreover, it is still unknown how long the construction work will last. During the HKU briefing, HKU's representatives failed to answer the question of when the project would be completed.

In addition, there will also be many construction projects in nearby places, such as the HKU campus redevelopment project, Wah Fu Estate redevelopment project, Cyberport expansion project, Queen

Mary Hospital redevelopment project, etc. The road traffic demand in this area will be huge. Traffic congestion is expected to deteriorate severely. In the event of an emergency such as flooding or fire incident, emergency rescue vehicles will be unable to reach promptly.

**5. Huge increase in traffic flow**

Serious traffic jam will be expected on Victoria Road and Pok Fu Lam Road during the construction period and after completion. The residents in this district, construction workers and future scientific research personnel and staff after completion will rely on driving and taking public transportation as there is no MTR. Therefore, Pok Fu Lam District will once again face severe traffic congestion every day.

In addition, according to HKU's estimation, there will be around 15,000 users in the GIC in the future. Even if not all of them will use public transportation, it is certain that this will greatly increase the load of the current insufficient public transportation.

**6. Lack of prior proper consultation**

HKU failed to comply with its commitment to the Town Planning Board, which requires prior consultation. HKU did not contact the Incorporated Owners and residents of Baguio Villa and other residential properties in Pok Fu Lam area. Therefore, it comes as a shock to Baguio Villa residents when they became aware of this issue after being notified by a former District Councilor, only less than 10 days before the deadline of consultation, HKU and the Southern District Council failed completely to conduct any prior consultation at all, ignoring residents' opinion and impact on them.

## Opposition to the Constructing HKU Global Innovation Centre (GIC) in Pok Fu Lam

I object to the Town Planning Board's approval to amend the Pok Fu Lam Outline Zoning Plan No. S/H10/22 for the following reasons:

### 1. Inappropriate location

It is in a green belt close to residential zones: Baguio Villas and other properties in the vicinity, e.g. Woodbury Court & Sassoon Road communities. Upon completion, many residents in Baguio Villa will be directly facing superstructures or vehicular access roads from a stone-throw away. Those facilities, e.g. nitrogen tank and laboratories might have potential danger to nearby residents when in operation. These facilities should never be built close to residential areas.

For the importance of interacting upstream, midstream and downstream innovative concepts and ideas, this GIC should be located in San Tin Technopole for the best interest of Hong Kong. It is clearly a better alternative.

### 2. Very high cost

The location is at a vegetated steep slope site. The massive difficult site formation works will be hugely expensive, funded unnecessarily by taxpayers. It will be more cost effective to build the GIC in other locations, e.g. San Tin Technopole.

The current plan is to take a significantly difficult and longer path to pursue the project. It is not helping the objective to fast-track Hong Kong's technology development.

### 3. Large scale and massive tree removal

The scale of the GIC is so vast that it is proposed to span around 500m from Sassoon Road to Baguio Villa. It requires removing some 2000 trees which will seriously degrade the existing landscape and ecological value of this land. It will also cause a large number of birds, butterflies and other animals to lose their habitat, seriously destroying the nature and ecology. It is also not in line with the government's carbon reduction goals.

### 4. Nuisance caused and damage to the environment during construction period

The noise, dust caused by large construction machines, traffic and other factors will be unbearable in this primarily residential areas during the construction period of this massive project. Moreover, it is still unknown how long the construction work will last. During the HKU briefing, HKU's representatives failed to answer the question of when the project would be completed.

In addition, there will also be many construction projects in nearby places, such as the HKU campus redevelopment project, Wah Fu Estate redevelopment project, Cyberport expansion project, Queen

Mary Hospital redevelopment project, etc. The road traffic demand in this area will be huge. Traffic congestion is expected to deteriorate severely. In the event of an emergency such as flooding or fire incident, emergency rescue vehicles will be unable to reach promptly.

**5. Huge increase in traffic flow**

Serious traffic jam will be expected on Victoria Road and Pok Fu Lam Road during the construction period and after completion. The residents in this district, construction workers and future scientific research personnel and staff after completion will rely on driving and taking public transportation as there is no MTR. Therefore, Pok Fu Lam District will once again face severe traffic congestion every day.

In addition, according to HKU's estimation, there will be around 15,000 users in the GIC in the future. Even if not all of them will use public transportation, it is certain that this will greatly increase the load of the current insufficient public transportation.

**6. Lack of prior proper consultation**

HKU failed to comply with its commitment to the Town Planning Board, which requires prior consultation. HKU did not contact the Incorporated Owners and residents of Baguio Villa and other residential properties in Pok Fu Lam area. Therefore, it comes as a shock to Baguio Villa residents when they became aware of this issue after being notified by a former District Councilor, only less than 10 days before the deadline of consultation, HKU and the Southern District Council failed completely to conduct any prior consultation at all, ignoring residents' opinion and impact on them.

**7. Weakening Slope Stability**

A fatal landslide incident from the slope next to the residential block in Baguio Villa occurred many years ago. The large scale construction work will likely weaken the slope's stability greatly. There is a real risk that it may endanger residents' lives.

**Conclusion**

Residents of Pok Fu Lam District are not opposed to the government's and our country's plans to vigorously promote innovation, technology and scientific research. However, HKU's proposal of selecting a large green belt slope that is not suitable for large-scale development as the location of the innovation center is obviously a wrong choice.

## Opposition to the Constructing HKU Global Innovation Centre (GIC) in Pok Fu Lam

I object to the Town Planning Board's approval to amend the Pok Fu Lam Outline Zoning Plan No. S/H10/22 for the following reasons:

### 1. Inappropriate location

It is in a green belt close to residential zones: Baguio Villas and other properties in the vicinity, e.g. Woodbury Court & Sassoon Road communities. Upon completion, many residents in Baguio Villa will be directly facing superstructures or vehicular access roads from a stone-throw away. Those facilities, e.g. nitrogen tank and laboratories might have potential danger to nearby residents when in operation. These facilities should never be built close to residential areas.

For the importance of interacting upstream, midstream and downstream innovative concepts and ideas, this GIC should be located in San Tin Technopole for the best interest of Hong Kong. It is clearly a better alternative.

### 2. Very high cost

The location is at a vegetated steep slope site. The massive difficult site formation works will be hugely expensive, funded unnecessarily by taxpayers. It will be more cost effective to build the GIC in other locations, e.g. San Tin Technopole.

The current plan is to take a significantly difficult and longer path to pursue the project. It is not helping the objective to fast-track Hong Kong's technology development.

### 3. Large scale and massive tree removal

The scale of the GIC is so vast that it is proposed to span around 500m from Sassoon Road to Baguio Villa. It requires removing some 2000 trees which will seriously degrade the existing landscape and ecological value of this land. It will also cause a large number of birds, butterflies and other animals to lose their habitat, seriously destroying the nature and ecology. It is also not in line with the government's carbon reduction goals.

### 4. Nuisance caused and damage to the environment during construction period

The noise, dust caused by large construction machines, traffic and other factors will be unbearable in this primarily residential areas during the construction period of this massive project. Moreover, it is still unknown how long the construction work will last. During the HKU briefing, HKU's representatives failed to answer the question of when the project would be completed.

In addition, there will also be many construction projects in nearby places, such as the HKU campus redevelopment project, Wah Fu Estate redevelopment project, Cyberport expansion project, Queen

Mary Hospital redevelopment project, etc. The road traffic demand in this area will be huge. Traffic congestion is expected to deteriorate severely. In the event of an emergency such as flooding or fire incident, emergency rescue vehicles will be unable to reach promptly.

**5. Huge increase in traffic flow**

Serious traffic jam will be expected on Victoria Road and Pok Fu Lam Road during the construction period and after completion. The residents in this district, construction workers and future scientific research personnel and staff after completion will rely on driving and taking public transportation as there is no MTR. Therefore, Pok Fu Lam District will once again face severe traffic congestion every day.

In addition, according to HKU's estimation, there will be around 15,000 users in the GIC in the future. Even if not all of them will use public transportation, it is certain that this will greatly increase the load of the current insufficient public transportation.

**6. Lack of prior proper consultation**

HKU failed to comply with its commitment to the Town Planning Board, which requires prior consultation. HKU did not contact the Incorporated Owners and residents of Baguio Villa and other residential properties in Pok Fu Lam area. Therefore, it comes as a shock to Baguio Villa residents when they became aware of this issue after being notified by a former District Councilor, only less than 10 days before the deadline of consultation, HKU and the Southern District Council failed completely to conduct any prior consultation at all, ignoring residents' opinion and impact on them.

## Opposition to the Constructing HKU Global Innovation Centre (GIC) in Pok Fu Lam

I object to the Town Planning Board's approval to amend the Pok Fu Lam Outline Zoning Plan No. S/H10/22 for the following reasons:

### 1. Inappropriate location

It is in a green belt close to residential zones: Baguio Villas and other properties in the vicinity, e.g. Woodbury Court & Sassoon Road communities. Upon completion, many residents in Baguio Villa will be directly facing superstructures or vehicular access roads from a stone-throw away. Those facilities, e.g. nitrogen tank and laboratories might have potential danger to nearby residents when in operation. These facilities should never be built close to residential areas.

For the importance of interacting upstream, midstream and downstream innovative concepts and ideas, this GIC should be located in San Tin Technopole for the best interest of Hong Kong. It is clearly a better alternative.

### 2. Very high cost

The location is at a vegetated steep slope site. The massive difficult site formation works will be hugely expensive, funded unnecessarily by taxpayers. It will be more cost effective to build the GIC in other locations, e.g. San Tin Technopole.

The current plan is to take a significantly difficult and longer path to pursue the project. It is not helping the objective to fast-track Hong Kong's technology development.

### 3. Large scale and massive tree removal

The scale of the GIC is so vast that it is proposed to span around 500m from Sassoon Road to Baguio Villa. It requires removing some 2000 trees which will seriously degrade the existing landscape and ecological value of this land. It will also cause a large number of birds, butterflies and other animals to lose their habitat, seriously destroying the nature and ecology. It is also not in line with the government's carbon reduction goals.

### 4. Nuisance caused and damage to the environment during construction period

The noise, dust caused by large construction machines, traffic and other factors will be unbearable in this primarily residential areas during the construction period of this massive project. Moreover, it is still unknown how long the construction work will last. During the HKU briefing, HKU's representatives failed to answer the question of when the project would be completed.

In addition, there will also be many construction projects in nearby places, such as the HKU campus redevelopment project, Wah Fu Estate redevelopment project, Cyberport expansion project, Queen

Mary Hospital redevelopment project, etc. The road traffic demand in this area will be huge. Traffic congestion is expected to deteriorate severely. In the event of an emergency such as flooding or fire incident, emergency rescue vehicles will be unable to reach promptly.

**5. Huge increase in traffic flow**

Serious traffic jam will be expected on Victoria Road and Pok Fu Lam Road during the construction period and after completion. The residents in this district, construction workers and future scientific research personnel and staff after completion will rely on driving and taking public transportation as there is no MTR. Therefore, Pok Fu Lam District will once again face severe traffic congestion every day.

In addition, according to HKU's estimation, there will be around 15,000 users in the GIC in the future. Even if not all of them will use public transportation, it is certain that this will greatly increase the load of the current insufficient public transportation.

**6. Lack of prior proper consultation**

HKU failed to comply with its commitment to the Town Planning Board, which requires prior consultation. HKU did not contact the Incorporated Owners and residents of Baguio Villa and other residential properties in Pok Fu Lam area. Therefore, it comes as a shock to Baguio Villa residents when they became aware of this issue after being notified by a former District Councilor, only less than 10 days before the deadline of consultation, HKU and the Southern District Council failed completely to conduct any prior consultation at all, ignoring residents' opinion and impact on them.

**7. Weakening Slope Stability**

A fatal landslide incident from the slope next to the residential block in Baguio Villa occurred many years ago. The large scale construction work will likely weaken the slope's stability greatly. There is a real risk that it may endanger residents' lives.

**Conclusion**

Residents of Pok Fu Lam District are not opposed to the government's and our country's plans to vigorously promote innovation, technology and scientific research. However, HKU's proposal of selecting a large green belt slope that is not suitable for large-scale development as the location of the innovation center is obviously a wrong choice.

## Opposition to the Constructing HKU Global Innovation Centre (GIC) in Pok Fu Lam

I object to the Town Planning Board's approval to amend the Pok Fu Lam Outline Zoning Plan No. S/H10/22 for the following reasons:

### 1. Inappropriate location

It is in a green belt close to residential zones: Baguio Villas and other properties in the vicinity, e.g. Woodbury Court & Sassoon Road communities. Upon completion, many residents in Baguio Villa will be directly facing superstructures or vehicular access roads from a stone-throw away. Those facilities, e.g. nitrogen tank and laboratories might have potential danger to nearby residents when in operation. These facilities should never be built close to residential areas.

For the importance of interacting upstream, midstream and downstream innovative concepts and ideas, this GIC should be located in San Tin Technopole for the best interest of Hong Kong. It is clearly a better alternative.

### 2. Very high cost

The location is at a vegetated steep slope site. The massive difficult site formation works will be hugely expensive, funded unnecessarily by taxpayers. It will be more cost effective to build the GIC in other locations, e.g. San Tin Technopole.

The current plan is to take a significantly difficult and longer path to pursue the project. It is not helping the objective to fast-track Hong Kong's technology development.

### 3. Large scale and massive tree removal

The scale of the GIC is so vast that it is proposed to span around 500m from Sassoon Road to Baguio Villa. It requires removing some 2000 trees which will seriously degrade the existing landscape and ecological value of this land. It will also cause a large number of birds, butterflies and other animals to lose their habitat, seriously destroying the nature and ecology. It is also not in line with the government's carbon reduction goals.

### 4. Nuisance caused and damage to the environment during construction period

The noise, dust caused by large construction machines, traffic and other factors will be unbearable in this primarily residential areas during the construction period of this massive project. Moreover, it is still unknown how long the construction work will last. During the HKU briefing, HKU's representatives failed to answer the question of when the project would be completed.

In addition, there will also be many construction projects in nearby places, such as the HKU campus redevelopment project, Wah Fu Estate redevelopment project, Cyberport expansion project, Queen

Mary Hospital redevelopment project, etc. The road traffic demand in this area will be huge. Traffic congestion is expected to deteriorate severely. In the event of an emergency such as flooding or fire incident, emergency rescue vehicles will be unable to reach promptly.

**5. Huge increase in traffic flow**

Serious traffic jam will be expected on Victoria Road and Pok Fu Lam Road during the construction period and after completion. The residents in this district, construction workers and future scientific research personnel and staff after completion will rely on driving and taking public transportation as there is no MTR. Therefore, Pok Fu Lam District will once again face severe traffic congestion every day.

In addition, according to HKU's estimation, there will be around 15,000 users in the GIC in the future. Even if not all of them will use public transportation, it is certain that this will greatly increase the load of the current insufficient public transportation.

**6. Lack of prior proper consultation**

HKU failed to comply with its commitment to the Town Planning Board, which requires prior consultation. HKU did not contact the Incorporated Owners and residents of Baguio Villa and other residential properties in Pok Fu Lam area. Therefore, it comes as a shock to Baguio Villa residents when they became aware of this issue after being notified by a former District Councilor, only less than 10 days before the deadline of consultation, HKU and the Southern District Council failed completely to conduct any prior consultation at all, ignoring residents' opinion and impact on them.

**7. Weakening Slope Stability**

A fatal landslide incident from the slope next to the residential block in Baguio Villa occurred many years ago. The large scale construction work will likely weaken the slope's stability greatly. There is a real risk that it may endanger residents' lives.

**Conclusion**

Residents of Pok Fu Lam District are not opposed to the government's and our country's plans to vigorously promote innovation, technology and scientific research. However, HKU's proposal of selecting a large green belt slope that is not suitable for large-scale development as the location of the innovation center is obviously a wrong choice.

Upon completion, many residents in Baguio Villa will be directly facing superstructures or vehicular access roads from a stone-throw away. Those facilities, e.g. nitrogen tank and laboratories might have potential danger to nearby residents when in operation. These facilities should never be built close to residential areas.

For the importance of interacting upstream, midstream and downstream innovative concepts and ideas, this GIC should be located in San Tin Technopole for the best interest of Hong Kong. It is clearly a better alternative.

### **2. Very high cost**

The location is at a vegetated steep slope site. The massive difficult site formation works will be hugely expensive, funded unnecessarily by taxpayers. It will be more cost effective to build the GIC in other locations, e.g. San Tin Technopole.

The current plan is to take a significantly difficult and longer path to pursue the project. It is not helping the objective to fast-track Hong Kong's technology development.

### **3. Large scale and massive tree removal**

The scale of the GIC is so vast that it is proposed to span around 500m from Sassoon Road to Baguio Villa. It requires removing some 2000 trees which will seriously degrade the existing landscape and ecological value of this land. It will also cause a large number of birds, butterflies and other animals to lose their habitat, seriously destroying the nature and ecology. It is also not in line with the government's carbon reduction goals.

### **4. Nuisance caused and damage to the environment during construction period**

The noise, dust caused by large construction machines, traffic and other factors will be unbearable in this primarily residential areas during the construction period of this massive project. Moreover, it is still unknown how long the construction work will last. During the HKU briefing, HKU's representatives failed to answer the question of when the project would be completed.

In addition, there will also be many construction projects in nearby places, such as the HKU campus redevelopment project, Wah Fu Estate redevelopment project, Cyberport expansion project, Queen

Mary Hospital redevelopment project, etc. The road traffic demand in this area will be huge. Traffic congestion is expected to deteriorate severely. In the event of an emergency such as flooding or fire incident, emergency rescue vehicles will be unable to reach promptly.

**5. Huge increase in traffic flow**

Serious traffic jam will be expected on Victoria Road and Pok Fu Lam Road during the construction period and after completion. The residents in this district, construction workers and future scientific research personnel and staff after completion will rely on driving and taking public transportation as there is no MTR. Therefore, Pok Fu Lam District will once again face severe traffic congestion every day.

In addition, according to HKU's estimation, there will be around 15,000 users in the GIC in the future. Even if not all of them will use public transportation, it is certain that this will greatly increase the load of the current insufficient public transportation.

**6. Lack of prior proper consultation**

HKU failed to comply with its commitment to the Town Planning Board, which requires prior consultation. HKU did not contact the Incorporated Owners and residents of Baguio Villa and other residential properties in Pok Fu Lam area. Therefore, it comes as a shock to Baguio Villa residents when they became aware of this issue after being notified by a former District Councilor, only less than 10 days before the deadline of consultation, HKU and the Southern District Council failed completely to conduct any prior consultation at all, ignoring residents' opinion and impact on them.

**7. Weakening Slope Stability**

A fatal landslide incident from the slope next to the residential block in Baguio Villa occurred many years ago. The large scale construction work will likely weaken the slope's stability greatly. There is a real risk that it may endanger residents' lives.

**Conclusion**

Residents of Pok Fu Lam District are not opposed to the government's and our country's plans to vigorously promote innovation, technology and scientific research. However, HKU's proposal of selecting a large green belt slope that is not suitable for large-scale development as the location of the innovation center is obviously a wrong choice.

## Opposition to the Constructing HKU Global Innovation Centre (GIC) in Pok Fu Lam

I object to the Town Planning Board's approval to amend the Pok Fu Lam Outline Zoning Plan No. S/H10/22 for the following reasons:

### 1. Inappropriate location

It is in a green belt close to residential zones: Baguio Villas and other properties in the vicinity, e.g. Woodbury Court & Sassoon Road communities. Upon completion, many residents in Baguio Villa will be directly facing superstructures or vehicular access roads from a stone-throw away. Those facilities, e.g. nitrogen tank and laboratories might have potential danger to nearby residents when in operation. These facilities should never be built close to residential areas.

For the importance of interacting upstream, midstream and downstream innovative concepts and ideas, this GIC should be located in San Tin Technopole for the best interest of Hong Kong. It is clearly a better alternative.

### 2. Very high cost

The location is at a vegetated steep slope site. The massive difficult site formation works will be hugely expensive, funded unnecessarily by taxpayers. It will be more cost effective to build the GIC in other locations, e.g. San Tin Technopole.

The current plan is to take a significantly difficult and longer path to pursue the project. It is not helping the objective to fast-track Hong Kong's technology development.

### 3. Large scale and massive tree removal

The scale of the GIC is so vast that it is proposed to span around 500m from Sassoon Road to Baguio Villa. It requires removing some 2000 trees which will seriously degrade the existing landscape and ecological value of this land. It will also cause a large number of birds, butterflies and other animals to lose their habitat, seriously destroying the nature and ecology. It is also not in line with the government's carbon reduction goals.

### 4. Nuisance caused and damage to the environment during construction period

The noise, dust caused by large construction machines, traffic and other factors will be unbearable in this primarily residential areas during the construction period of this massive project. ### 2. Very high cost

The location is at a vegetated steep slope site. The massive difficult site formation works will be hugely expensive, funded unnecessarily by taxpayers. It will be more cost effective to build the GIC in other locations, e.g. San Tin Technopole.

The current plan is to take a significantly difficult and longer path to pursue the project. It is not helping the objective to fast-track Hong Kong's technology development.

### 3. Large scale and massive tree removal

The scale of the GIC is so vast that it is proposed to span around 500m from Sassoon Road to Baguio Villa. It requires removing some 2000 trees which will seriously degrade the existing landscape and ecological value of this land. It will also cause a large number of birds, butterflies and other animals to lose their habitat, seriously destroying the nature and ecology. It is also not in line with the government's carbon reduction goals.

### 4. Nuisance caused and damage to the environment during construction period

The noise, dust caused by large construction machines, traffic and other factors will be unbearable in this primarily residential areas during the construction period of this massive project. Moreover, it is still unknown how long the construction work will last. During the HKU briefing, HKU's representatives failed to answer the question of when the project would be completed.

In addition, there will also be many construction projects in nearby places, such as the HKU campus redevelopment project, Wah Fu Estate redevelopment project, Cyberport expansion project, Queen

Mary Hospital redevelopment project, etc. The road traffic demand in this area will be huge. Traffic congestion is expected to deteriorate severely. In the event of an emergency such as flooding or fire incident, emergency rescue vehicles will be unable to reach promptly.

**5. Huge increase in traffic flow**

Serious traffic jam will be expected on Victoria Road and Pok Fu Lam Road during the construction period and after completion. The residents in this district, construction workers and future scientific research personnel and staff after completion will rely on driving and taking public transportation as there is no MTR. Therefore, Pok Fu Lam District will once again face severe traffic congestion every day.

In addition, according to HKU's estimation, there will be around 15,000 users in the GIC in the future. Even if not all of them will use public transportation, it is certain that this will greatly increase the load of the current insufficient public transportation.

**6. Lack of prior proper consultation**

HKU failed to comply with its commitment to the Town Planning Board, which requires prior consultation. HKU did not contact the Incorporated Owners and residents of Baguio Villa and other residential properties in Pok Fu Lam area. Therefore, it comes as a shock to Baguio Villa residents when they became aware of this issue after being notified by a former District Councilor, only less than 10 days before the deadline of consultation, HKU and the Southern District Council failed completely to conduct any prior consultation at all, ignoring residents' opinion and impact on them.

**7. Weakening Slope Stability**

A fatal landslide incident from the slope next to the residential block in Baguio Villa occurred many years ago. The large scale construction work will likely weaken the slope's stability greatly. There is a real risk that it may endanger residents' lives.

**Conclusion**

Residents of Pok Fu Lam District are not opposed to the government's and our country's plans to vigorously promote innovation, technology and scientific research. However, HKU's proposal of selecting a large green belt slope that is not suitable for large-scale development as the location of the innovation center is obviously a wrong choice.

## Opposition to the Constructing HKU Global Innovation Centre (GIC) in Pok Fu Lam

I object to the Town Planning Board's approval to amend the Pok Fu Lam Outline Zoning Plan No. S/H10/22 for the following reasons:

### 1. Inappropriate location

It is in a green belt close to residential zones: Baguio Villas and other properties in the vicinity, e.g. Woodbury Court & Sassoon Road communities. Upon completion, many residents in Baguio Villa will be directly facing superstructures or vehicular access roads from a stone-throw away. Those facilities, e.g. nitrogen tank and laboratories might have potential danger to nearby residents when in operation. These facilities should never be built close to residential areas.

For the importance of interacting upstream, midstream and downstream innovative concepts and ideas, this GIC should be located in San Tin Technopole for the best interest of Hong Kong. It is clearly a better alternative.

### 2. Very high cost

The location is at a vegetated steep slope site. The massive difficult site formation works will be hugely expensive, funded unnecessarily by taxpayers. It will be more cost effective to build the GIC in other locations, e.g. San Tin Technopole.

The current plan is to take a significantly difficult and longer path to pursue the project. It is not helping the objective to fast-track Hong Kong's technology development.

### 3. Large scale and massive tree removal

The scale of the GIC is so vast that it is proposed to span around 500m from Sassoon Road to Baguio Villa. It requires removing some 2000 trees which will seriously degrade the existing landscape and ecological value of this land. It will also cause a large number of birds, butterflies and other animals to lose their habitat, seriously destroying the nature and ecology. It is also not in line with the government's carbon reduction goals.

### 4. Nuisance caused and damage to the environment during construction period

The noise, dust caused by large construction machines, traffic and other factors will be unbearable in this primarily residential areas during the construction period of this massive project. Moreover, it is still unknown how long the construction work will last. During the HKU briefing, HKU's representatives failed to answer the question of when the project would be completed.

In addition, there will also be many construction projects in nearby places, such as the HKU campus redevelopment project, Wah Fu Estate redevelopment project, Cyberport expansion project, Queen

## Opposition to the Constructing HKU Global Innovation Centre (GIC) in Pok Fu Lam

I object to the Town Planning Board's approval to amend the Pok Fu Lam Outline Zoning Plan No. S/H10/22 for the following reasons:

### 1. Inappropriate location

It is in a green belt close to residential zones: Baguio Villas and other properties in the vicinity, e.g. Woodbury Court & Sassoon Road communities. Upon completion, many residents in Baguio Villa will be directly facing superstructures or vehicular access roads from a stone-throw away. Those facilities, e.g. nitrogen tank and laboratories might have potential danger to nearby residents when in operation. These facilities should never be built close to residential areas.

For the importance of interacting upstream, midstream and downstream innovative concepts and ideas, this GIC should be located in San Tin Technopole for the best interest of Hong Kong. It is clearly a better alternative.

### 2. Very high cost

The location is at a vegetated steep slope site. The massive difficult site formation works will be hugely expensive, funded unnecessarily by taxpayers. It will be more cost effective to build the GIC in other locations, e.g. San Tin Technopole.

The current plan is to take a significantly difficult and longer path to pursue the project. It is not helping the objective to fast-track Hong Kong's technology development.

### 3. Large scale and massive tree removal

The scale of the GIC is so vast that it is proposed to span around 500m from Sassoon Road to Baguio Villa. It requires removing some 2000 trees which will seriously degrade the existing landscape and ecological value of this land. It will also cause a large number of birds, butterflies and other animals to lose their habitat, seriously destroying the nature and ecology. It is also not in line with the government's carbon reduction goals.

### 4. Nuisance caused and damage to the environment during construction period

The noise, dust caused by large construction machines, traffic and other factors will be unbearable in this primarily residential areas during the construction period of this massive project. Moreover, it is still unknown how long the construction work will last. During the HKU briefing, HKU's representatives failed to answer the question of when the project would be completed.

In addition, there will also be many construction projects in nearby places, such as the HKU campus redevelopment project, Wah Fu Estate redevelopment project, Cyberport expansion project, Queen

Mary Hospital redevelopment project, etc. The road traffic demand in this area will be huge. Traffic congestion is expected to deteriorate severely. In the event of an emergency such as flooding or fire incident, emergency rescue vehicles will be unable to reach promptly.

**5. Huge increase in traffic flow**

Serious traffic jam will be expected on Victoria Road and Pok Fu Lam Road during the construction period and after completion. The residents in this district, construction workers and future scientific research personnel and staff after completion will rely on driving and taking public transportation as there is no MTR. Therefore, Pok Fu Lam District will once again face severe traffic congestion every day.

In addition, according to HKU's estimation, there will be around 15,000 users in the GIC in the future. Even if not all of them will use public transportation, it is certain that this will greatly increase the load of the current insufficient public transportation.

**6. Lack of prior proper consultation**

HKU failed to comply with its commitment to the Town Planning Board, which requires prior consultation. HKU did not contact the Incorporated Owners and residents of Baguio Villa and other residential properties in Pok Fu Lam area. Therefore, it comes as a shock to Baguio Villa residents when they became aware of this issue after being notified by a former District Councilor, only less than 10 days before the deadline of consultation, HKU and the Southern District Council failed completely to conduct any prior consultation at all, ignoring residents' opinion and impact on them.

**7. Weakening Slope Stability**

A fatal landslide incident from the slope next to the residential block in Baguio Villa occurred many years ago. The large scale construction work will likely weaken the slope's stability greatly. There is a real risk that it may endanger residents' lives.

**Conclusion**

Residents of Pok Fu Lam District are not opposed to the government's and our country's plans to vigorously promote innovation, technology and scientific research. However, HKU's proposal of selecting a large green belt slope that is not suitable for large-scale development and the location of the innovation center is obviously a wrong choice.
