## 1.0 INTRODUCTION

### Background

- 1.1 The Subject Site is located at 13 – 17 Wah Sing Street in Kwai Chung. **Figure 1.1** shows the location of the Subject Site.
- 1.2 On 24<sup>th</sup> May 2024, the Town Planning Board (“TPB”) approved the S16 Planning Application of Proposed minor relaxation of plot ratio restriction for Permitted Warehouse Use (excluding Dangerous Goods Godown) in “Industrial” Zone at the Subject Site (TPB ref: A/KC/505) (“the Approved Warehouse”). The Owner now intends to redevelop the Subject Site into a Proposed Concrete Batching Plant (“Proposed Concrete Batching Plant”).
- 1.3 CKM Asia Limited, a traffic and transportation planning consultancy firm, was commissioned by the Owner to conduct a traffic impact assessment in support of the Proposed Concrete Batching Plant. This report presents the findings of the Traffic Impact Assessment.

### Structure of Report

- 1.4 The report is structured as follows:

- Chapter One - Gives the background of the project;
- Chapter Two - Describes the existing situation;
- Chapter Three - Explains the Proposed Concrete Batching Plant and presents the internal transport facilities provided;
- Chapter Four - Describes the traffic impact analysis;
- Chapter Five - Gives the overall conclusion.

## 2.0 EXISTING SITUATION

### The Subject Site

- 2.1 The Subject Site fronts onto Wah Sing Street to the east and a Right-of-Way (i.e. Kwai Chung Town Lot 111 RP in DD445) ("ROW") to the west and south. In-between the ROW to the west and Tai Lin Pai Road, is the Gold King Industrial Building. The existing run-in/out of the Subject Site is provided at the ROW, which connects with Tai Lin Pai Road.

### Public Transport Facilities

- 2.2 The Subject Site is well-served by public transport facilities, and access to these services is convenient. Details of public transport services operating in the vicinity of the Subject Site are given in **Table 2.1** and shown in **Figure 2.1**.

TABLE 2.1 ROAD-BASED PUBLIC TRANSPORT SERVICES OPERATING NEAR THE SUBJECT SITE

Route	Routing	Frequency (minutes)
KMB 30	Cheung Sha Wan – Allway Gardens	25 – 30
KMB 31	Tsuen Wan West Station – Shek Lei (Circular)	10 – 20
KMB 31B	Olympic Station – Shek Lei (Tai Loong Street)	12 – 25
KMB 31M	Shek Lei (Lei Pui Street) – Kwai Fong Station	5 – 15
KMB 31P <sup>(1)</sup>	Shek Lei Commercial Complex → Kwai Fong Station	AM Peak
KMB 32	Olympic Station – Shek Wai Kok	20 – 28
KMB 32H	Cheung Shan – Lai Chi Kok	30 – 60
KMB 32M	Kwai Fong Station – Cheung Shan (Circular)	15 – 25
KMB 33A	Mong Kok (Park Avenue) – Tsuen Wan (Nina Tower)	17 – 25
KMB 34	Tsuen Wan (Bayview Garden) – Kwai Shing (Central)	12 – 20
KMB 35A	Tsim Sha Tsui East – On Yam Estate	5 – 20
KMB 35X <sup>(2)</sup>	On Yam Estate – Tsim Sha Tsui East	AM, PM Peak
KMB 36A	Cheung Sha Wan (Sham Mong Road) – Lei Muk Shue	15 – 30
KMB 36B	Jordan (West Kowloon Station) – Lei Muk Shue	12 – 25
KMB 36M	Kwai Fong Station – Lei Muk Shue	5 – 12
KMB 36X <sup>(1)</sup>	Lei Muk Shue – Tsim Sha Tsui East (Mody Road)	AM, PM Peak
KMB 37	Kwai Shing (Central) – Olympic Station	12 – 20
KMB 37M	Kwai Hing Station → Kwai Shing Central (Circular)	8 – 20
KMB 38	Kwai Shing (East) – Ping Tin	6 – 20
KMB 38A	Mei Foo – Riviera Gardens	20 – 30
KMB 38B <sup>(1)</sup>	Riviera Gardens – Shek Mun Estate	AM, PM Peak
KMB 38P <sup>(1)</sup>	Kwai Shing (Central) – Ping Tin	AM, PM Peak
KMB 40	Laguna City – Tsuen Wan (Belvedere Garden)	11 – 25
KMB 40A <sup>(1)</sup>	Ping Tin – Kwai Hing Station	AM, PM Peak
KMB 40P	Tsuen Wan (Nina Tower) – Kwun Tong Ferry	8 – 30
KMB 40E <sup>(1)</sup>	Nai Chung – Kwai Chung (Kwai Fong Estate)	AM, PM Peak
KMB 40X	Wu Kai Sha Station – Kwai Chung Estate	6 – 20
KMB 42C	Cheung Hang Estate – Lam Tin Station	5 – 15
KMB 43	Cheung Hong Estate – Tsuen Wan West Station	12 – 20
KMB 43A	Cheung Wang Estate – Shek Lei (Tai Loong Street)	6 – 20
KMB 43D <sup>(1)</sup>	Cheung Wang Estate → Kwai Shing	AM Peak
KMB 43S <sup>(1)</sup>	Shek Yam → Hong Kong Science Park	AM Peak
KMB 44M	Tsing Yi Station – Kwai Chung Estate	11 – 20
KMB 46P <sup>(2)</sup>	Mei Tin – Kwai Fong Station (Circular)	10 – 30

Note: KMB – Kowloon Motor Bus LWB – Long Win Bus CTB – Citybus GMB – Green Minibus

(2) Monday to Saturday. No services on Sundays and Public Holidays

(O) Overnight service

### Pedestrian Facilities

- 2.3 In the vicinity of the Subject Site, footpaths are provided alongside roads, and footbridges are provided across Kwai Chung Road.

### Existing Traffic Flows

- 2.4 To quantify the existing traffic flows in the vicinity of the Subject Site, manual classified counts were conducted on Monday, 20<sup>th</sup> May 2024 at the following junctions:
- J01 – Junction of Kwai Chung Road / Kwai On Road / Kwai Yik Road;
  - J02 – Junction of Tai Lin Pai Road / Kwai On Road;
  - J03 – Junction of Tai Lin Pai Road / Kung Yip Street;
  - J04 – Junction of Kung Yip Street / Wah Sing Street;
  - J05 – Junction of Kwai Chung Road / Tai Lin Pai Road / Kwai Foo Road; and
  - J06 – Junction of Tai Lin Pai Road / San Kwai Street.
- 2.5 In view that junction of Kwai Chung Road / Tai Lin Pai Road is not a signal controlled or a priority junction, the junction performance assessment is not conducted.
- 2.6 The existing road network, the locations of these surveyed junctions and the area of influence (“AOI”) are shown in **Figure 2.2** and the junction layouts are shown in **Figures 2.3 – 2.8**.
- 2.7 The traffic counts are classified by vehicle type to enable traffic flows in passenger car units (“pcu”) to be calculated. The AM and PM peak hours identified from the surveys are found to be between 0845 – 0945 hours and 1715 – 1815 hours respectively. **Figure 2.9** presents the 2024 observed AM and PM peak hour traffic flows in pcu/hour.

### 3.0 THE PROPOSED CONCRETE BATCHING PLANT

#### Development Schedule

- 3.1 The Proposed Concrete Batching Plant has 4 production lines with peak concrete production capacity of 100m<sup>3</sup>/hour/line. Sufficient loading / unloading facilities which meet the operational requirements are provided within the Proposed Concrete Batching Plant.

#### Vehicular Access Points

- 3.2 The vehicular access to the Proposed Concrete Batching Plant is provided at Wah Sing Street.

#### Operation of Proposed Concrete Batching Plant

- 3.3 The Proposed Concrete Batching Plant has 2 main activities which generate traffic: (a) delivery of concrete from the Proposed Concrete Batching Plant, and (b) delivery of raw materials, such as aggregate, cementitious materials, etc, to the Proposed Concrete Batching Plant.
- 3.4 Details of vehicle movements related to the concrete production and raw material delivery, are presented in **Table 3.1**.

TABLE 3.1 DETAILS OF DELIVERY TO / FROM THE PROPOSED CONCRETE BATCHING PLANT

Type of Delivery	Type of Vehicle	Typical Vehicle Dimension (Approx.)	Traffic Generation (veh/hour)		
			Peak Concrete Production (0600 – 1800 hrs)	Peak Raw Material Delivery (1800 – 2300 hrs)	Evening (2300 – 0600 hrs)
<i>Concrete mixer truck [a]</i>					
Concrete	Concrete mixer truck	10m(L) x 2.5m(W)	Max. 40 <sup>(1)</sup>	6	2
<i>Raw material delivery truck [b]</i>					
Aggregate/sand	Aggregate/sand truck	Heavy Goods Vehicle: 10m(L) x 2.5m(W)	18	45	7
Admixture	Admixture truck		0	1	0
Waste	Waste truck		2	0	0
Cement / PFA	Cement / PFA tanker	Articulated Vehicles: 15.4m(L) x 2.5m (W)	2	10	7
<b>Total [a] + [b]</b>			<b>62</b>	<b>62</b>	<b>16</b>

Note: <sup>(1)</sup> Maximum concrete production capacity = 100m<sup>3</sup> x 4 production lines ÷ typical capacity of 10m<sup>3</sup> for a concrete mixer truck = 40 nos.

- 3.5 **Table 3.1** shows the following:

- During the **peak concrete production**, i.e. 0600 to 1800 hours, the Proposed Concrete Batching Plant is expected to operate at its production capacity. A total of 40 concrete mixer trucks and 22 raw material delivery trucks per hour are generated.
- The **peak raw material delivery period** is from 1800 to 2300 hours. Each hour 6 concrete mixers trucks and 56 raw material delivery trucks are generated.

### Internal Transport Facilities

- 3.6 The internal transport facilities provided for the Proposed Concrete Batching Plant are presented in Table 3.2 and the master layout plan is shown in Figure 3.1.

TABLE 3.2 INTERNAL TRANSPORT FACILITIES

Ref.	Type	Dimension	Quantity
Ground Floor			
LP01-LP02	Waiting space	11m(L) x 3.5m(W) x 4.7m(H)	2
LP03	Raw material unloading bay for container	16m(L) x 3.5m(W) x 4.7m(H)	1
LP04-LP07	Concrete mixer truck loading point	11m(L) x 3.5m(W) x 4.7m(H)	4
N/A	Raw material unloading area	N/A	3
Total			10

### Swept Path Analysis

- 3.7 The CAD-based swept path analysis programme, AUTODESK VEHICLE TRACKING, was used to ensure that all vehicles could enter and leave their respective space / bays, with ease. The swept path analysis drawings are found in Appendix B.

## 4.0 TRAFFIC IMPACT

### Design Year

4.1 The Proposed Concrete Batching Plant is expected to be completed in 2026, and the assessment year adopted is 2029, i.e. 3 years after the completion. The 2 scenarios for year 2029 assessed are:

- (i) Year 2029 AM and PM peak hours without the Concrete Batching Plant;
- (ii) Year 2029 AM and PM peak hours with the Concrete Batching Plant

### Traffic Forecasting Methodology

4.2 Since the completion year of the Proposed Concrete Batching Plant is same as the Approved Warehouse, which is 2026, the same traffic forecasting methodology adopted for the Approved Warehouse is applied for the Proposed Concrete Batching Plant.

### Traffic Generation of the Proposed Concrete Batching Plant

4.3 With reference to **Table 3.1**, the estimated traffic generation of the Proposed Concrete Batching Plant is given in **Table 4.1**. To be conservative, the peak concrete production is assumed to occur during both the AM and PM peak hours.

TABLE 4.1 TRAFFIC GENERATION OF THE PROPOSED CONCRETE BATCHING PLANT

Item	AM Peak Hour		PM Peak Hour	
	Generation	Attraction	Generation	Attraction
Total in veh/hr [From <b>Table 3.1</b> ]	62	62	62	62
PCU Factor	2.5	2.5	2.5	2.5
<b>Total in PCU/Hour</b>	<b>155</b>	<b>155</b>	<b>155</b>	<b>155</b>
	<b>310 (2-way)</b>		<b>310 (2-way)</b>	

4.4 **Table 4.1** shows that the Proposed Concrete Batching Plant is assumed to generate a total of 124 vehicles (2-way), or equivalent to 310 pcu (2-way) during the AM and PM peak hours.

### 2029 Traffic Flows

4.5 Year 2029 traffic flows for the following cases are derived:

*2029 without the Proposed Concrete Batching Plant [A]* = (i) 2026 traffic flows derived with reference to Base District Traffic Model + (ii) estimated total growth from 2026 to 2029, i.e. +0.5% per annum + (iii) traffic generated by other development in the vicinity of the Proposed Concrete Batching Plant

*2029 with the Proposed Concrete Batching Plant [B]* = [A] + Traffic generated by the Proposed Concrete Batching Plant (**Table 4.1**)

4.6 The 2029 peak hour traffic flows for the cases without and with the Proposed Concrete Batching Plant, are shown in **Figures 4.1 - 4.2**, respectively. The ingress and egress routes of the Proposed Concrete Batching Plant are shown in **Figure 4.3**.

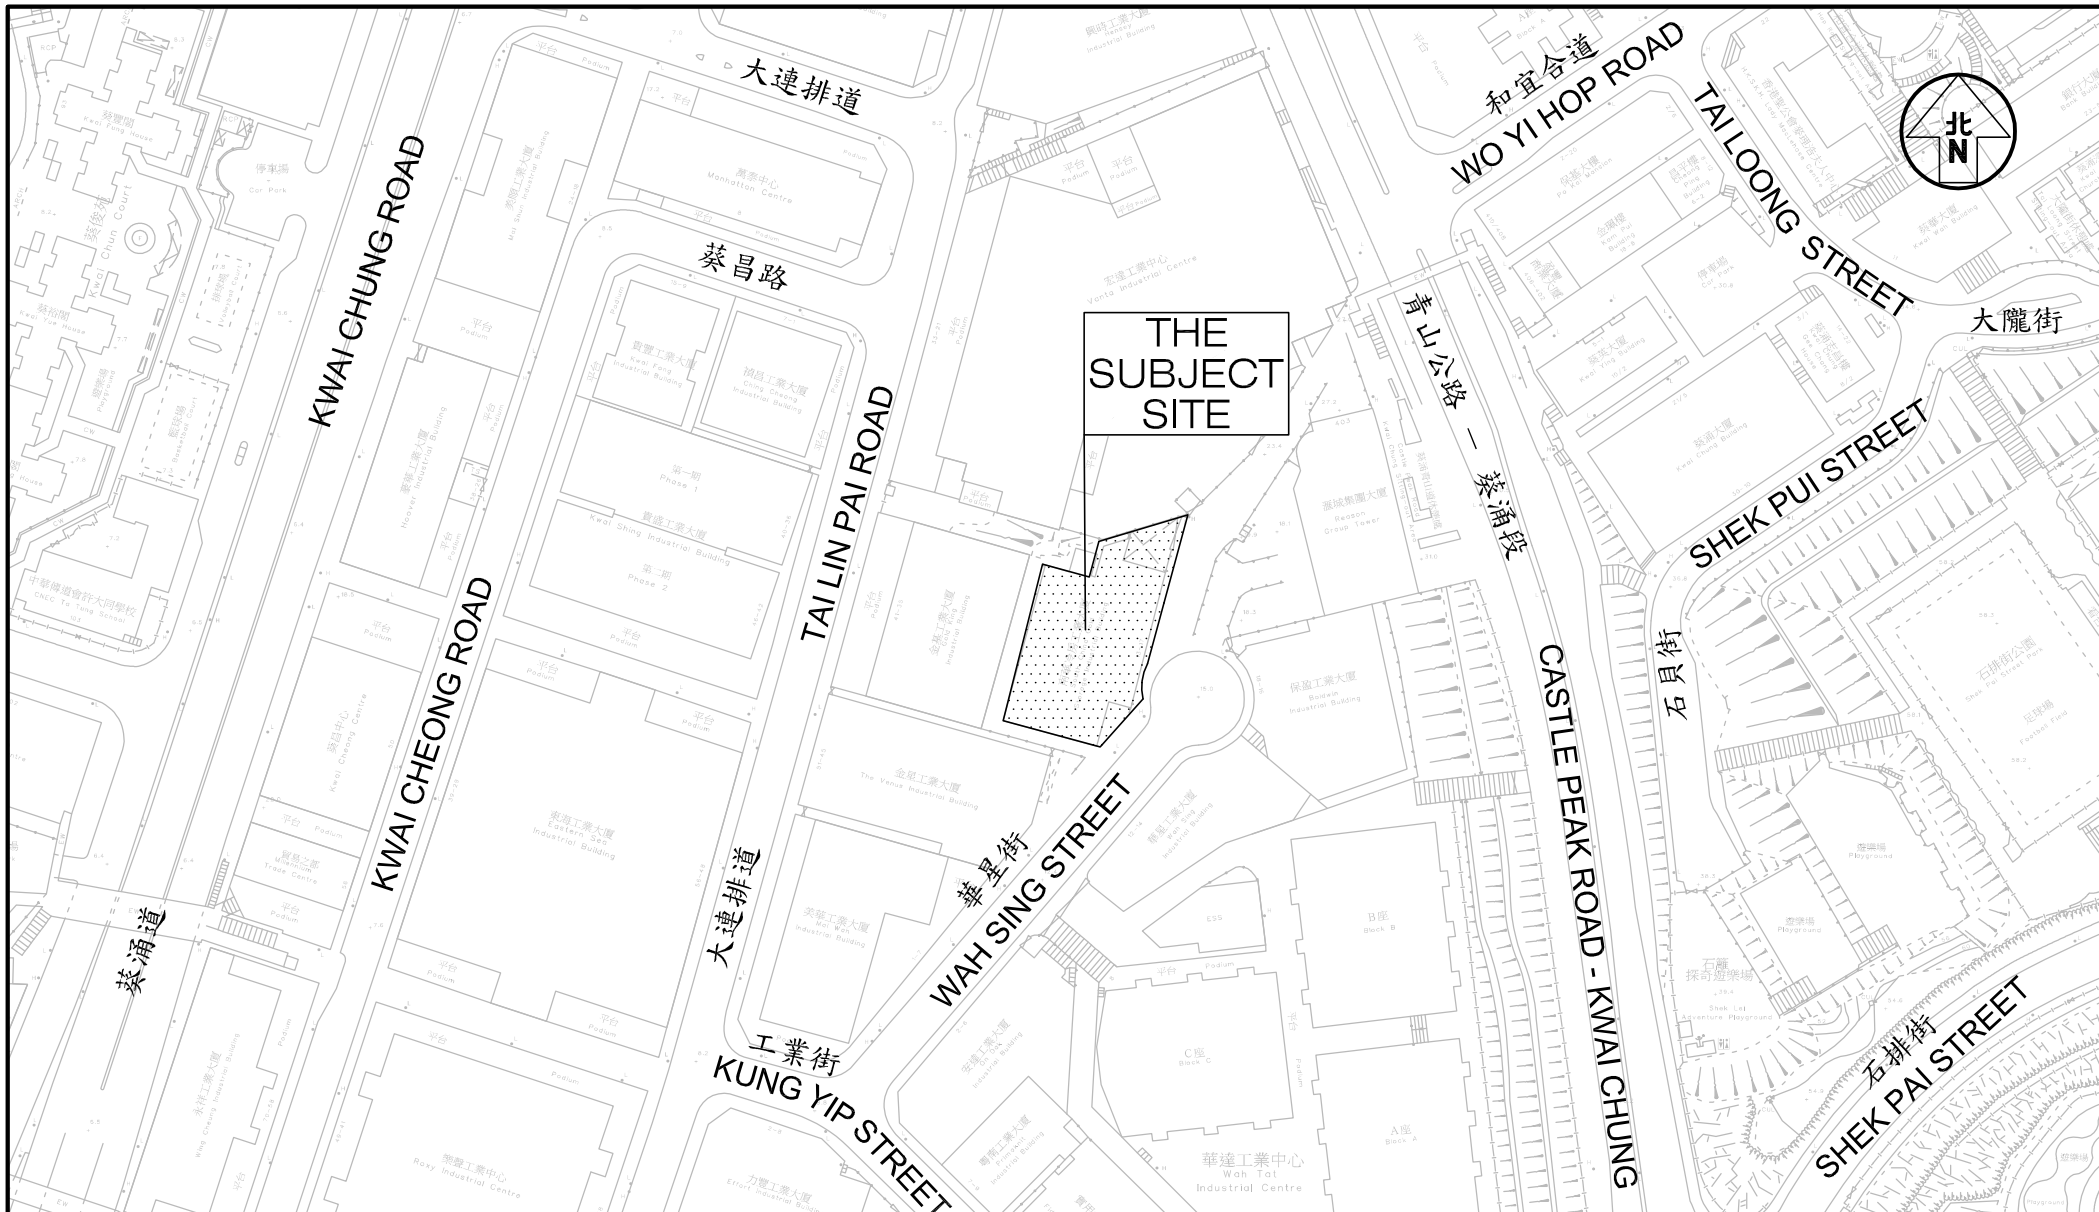

## 5.0 SUMMARY

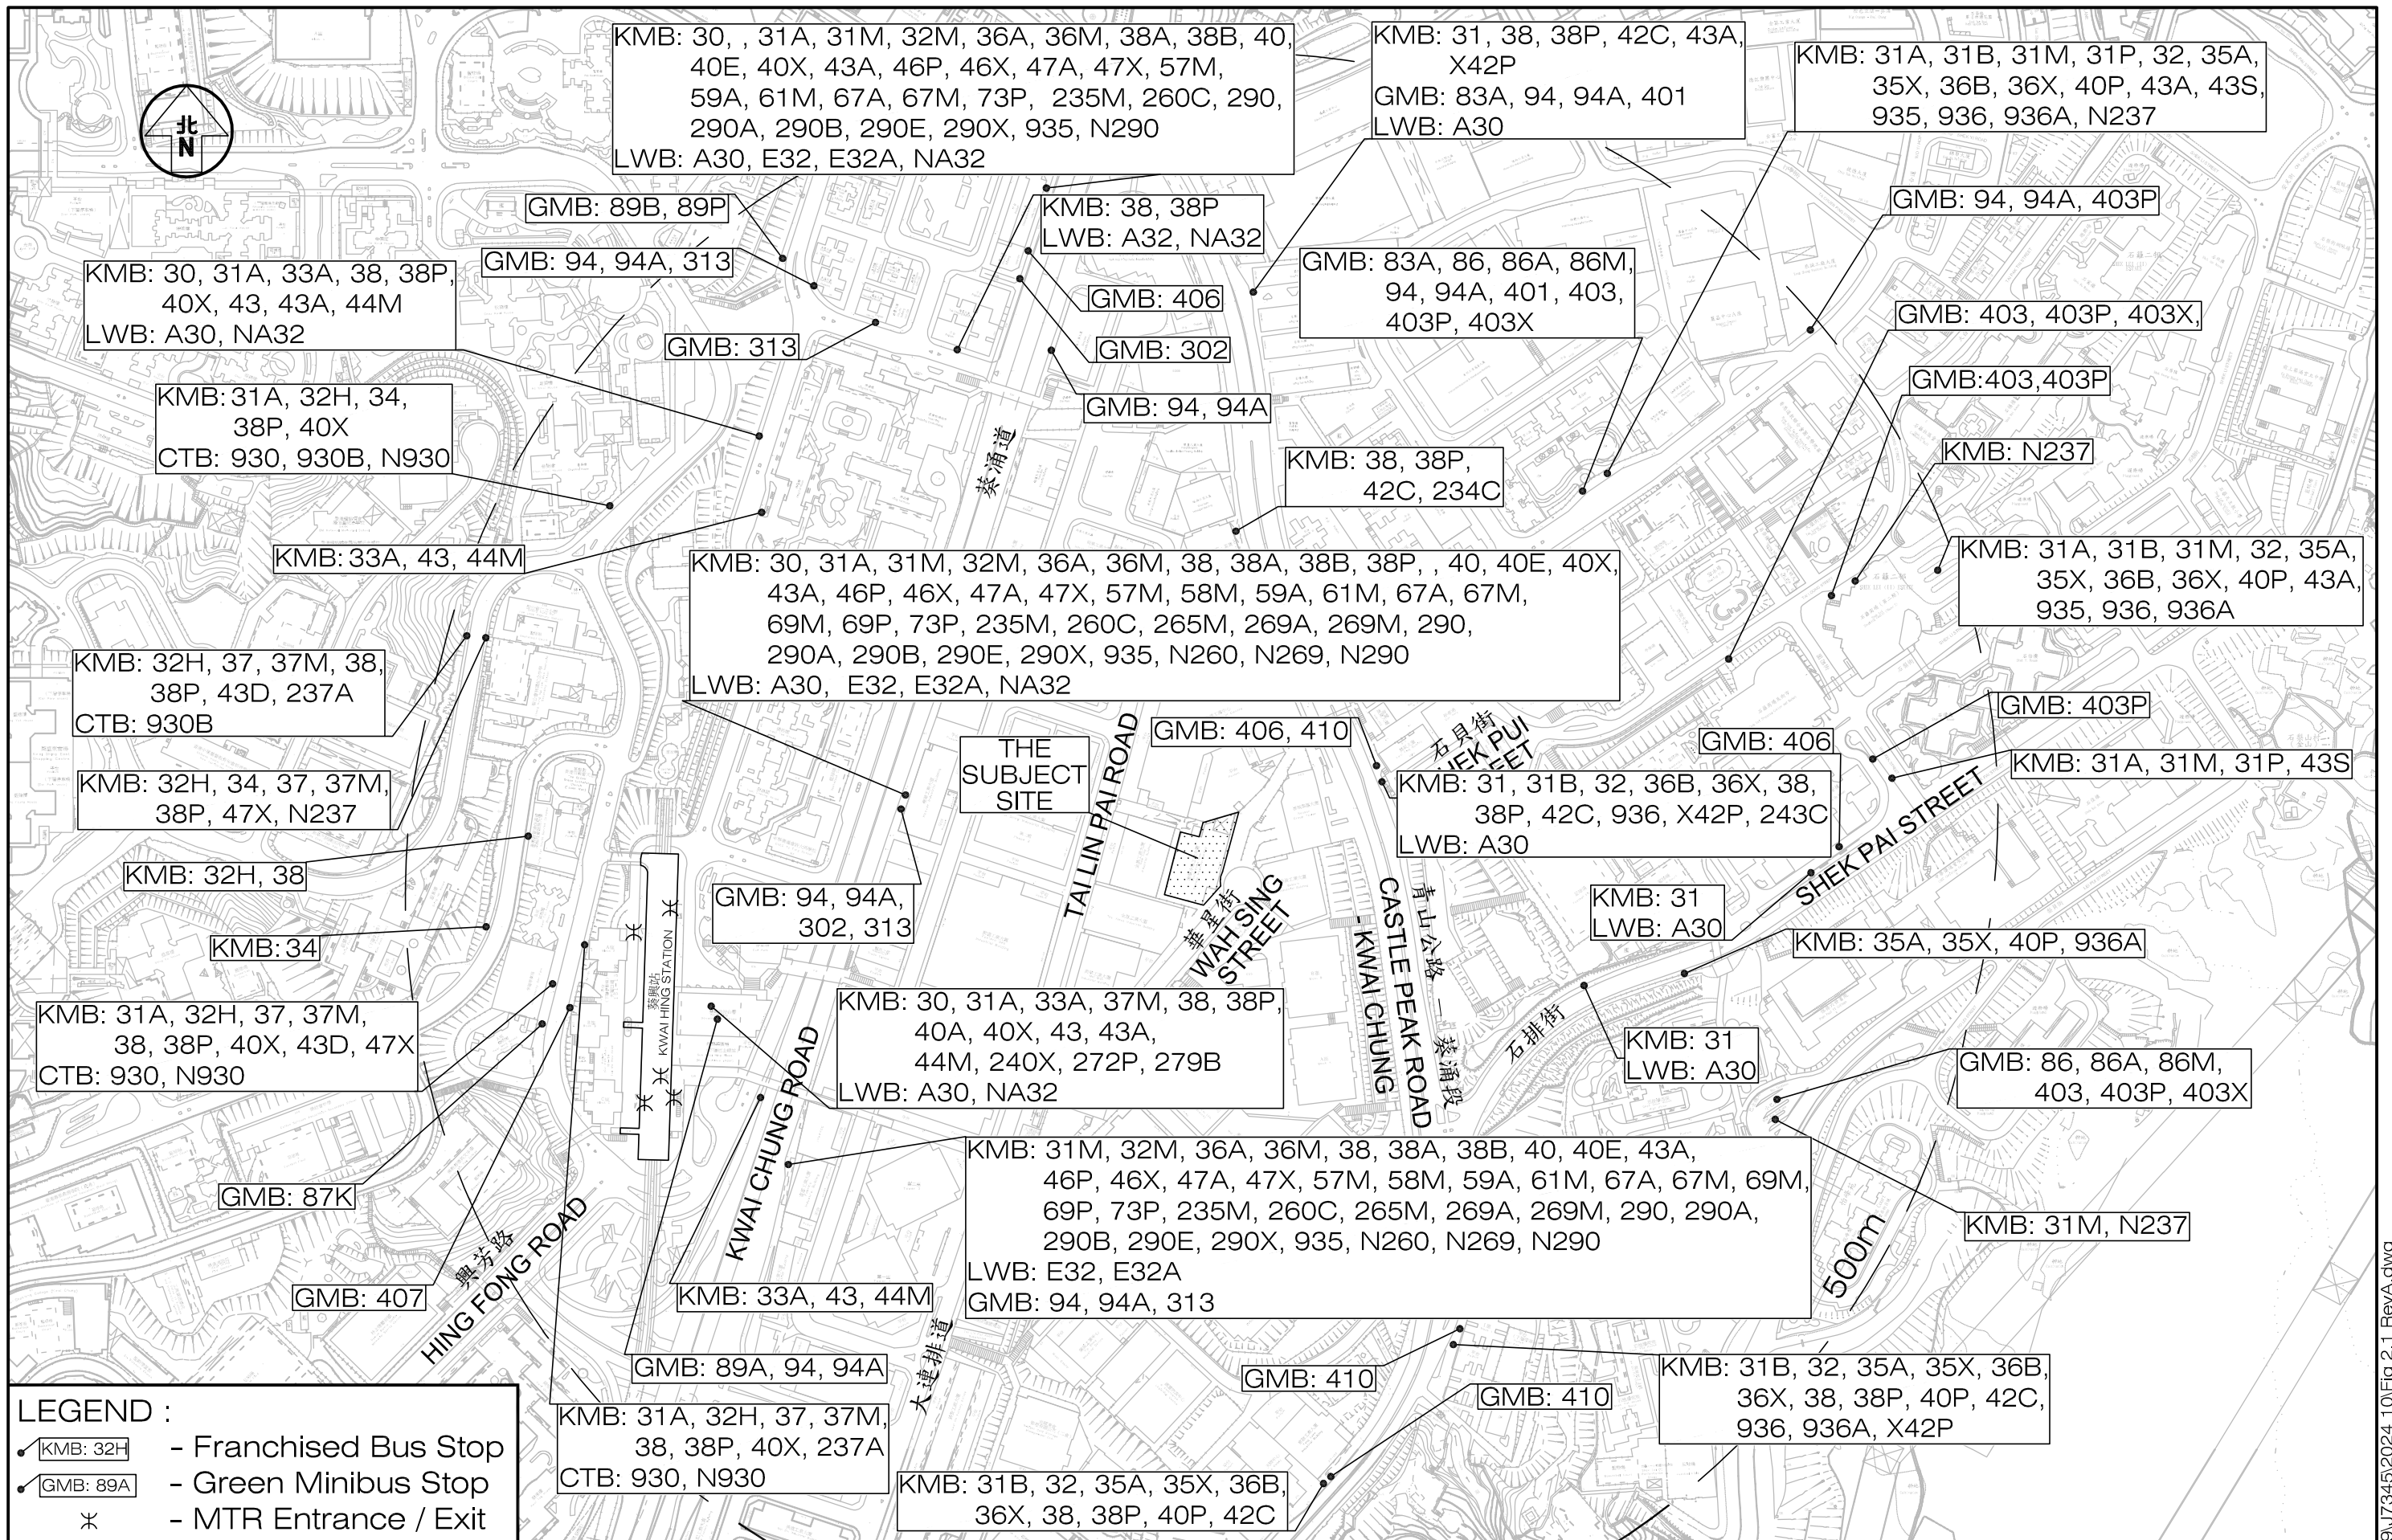

- 5.1 On 24<sup>th</sup> May 2024, the TPB approved the S16 Planning Application of Proposed minor relaxation of plot ratio restriction for Permitted Warehouse Use (excluding Dangerous Goods Godown) in “Industrial” Zone at 13 – 17 Wah Sing Street in Kwai Chung the Subject Site (TPB ref: A/KC/505). The Owner now intends to redevelop the Subject Site into a Proposed Concrete Batching Plant.
- 5.2 The Proposed Concrete Batching Plant provides sufficient internal transport facilities meet the operational requirements. The vehicular access to the Proposed Concrete Batching Plant is provided at Wah Sing Street.
- 5.3 Manual classified counts were conducted at junctions located in the vicinity of the Proposed Concrete Batching Plant in order to establish the peak hour traffic flows. Currently, the junctions operate with capacities during the AM and PM peak hours.
- 5.4 The Proposed Concrete Batching Plant is expected to be completed by 2026, and the junction capacity analysis is undertaken for year 2029. With the Further Improvement implemented, in addition to the improvement proposed by the Hong Kong Housing Authority, at the junction of Tai Lin Pai Road / Kwai On Road, all junctions analysed are found to have sufficient capacity to accommodate the expected traffic flow in 2029 and the traffic generated by the Proposed Concrete Batching Plant.
- 5.5 It is concluded that the Proposed Concrete Batching Plant will result in **no** adverse traffic impact to the surrounding road network. From traffic engineering grounds, the Proposed Concrete Batching Plant is acceptable.

# Priority Junction Analysis

Junction:	J02 - Tai Lin Pai Road / Kwai On Road		
Design Year:	2024	Job Number:	J7345
Scenario:	Existing Condition	Date:	30 October 2024
			P. 4

The predictive equations of capacity of movement are:

$$Q-BA = D[627 + 14W-CR - Y(0.364q-AC + 0.144q-AB + 0.229q-CA + 0.52q-CB)]$$

$$Q-BC = E[745 - Y(0.364q-AC + 0.144q-AB)]$$

$$Q-CB = F[745 - 0.364Y(q-AC + q-AB)]$$

The geometric parameters represented by D, E, F are:

$$D = [1 + 0.094(w-BA - 3.65)][1 + 0.0009(V-rBA - 120)][1 + 0.0006(V-IBA - 150)]$$

$$E = [1 + 0.094(w-BC - 3.65)][1 + 0.0009(V-rBC - 120)]$$

$$F = [1 + 0.094(w-CB - 3.65)][1 + 0.0009(V-rCB - 120)]$$

where  $Y = 1 - 0.0345W$

q-AB, etc = the design flow of movement AB, etc

W = major road width

W-CR = central reserve width

w-BA, etc = lane width to vehicle

v-rBA, etc = visibility to the right for waiting vehicles in stream BA, etc

v-IBA, etc = visibility to the left for waiting vehicles in stream BA, etc

Geometry :

	Input	Input	Input	Calculated	
W	14.00	V-rBA	250	D	1.1773
W-CR	3.00	V-IBA	110	E	1.2062
		V-rBC	250	F	1.0908
		V-rCB	250	Y	0.5170

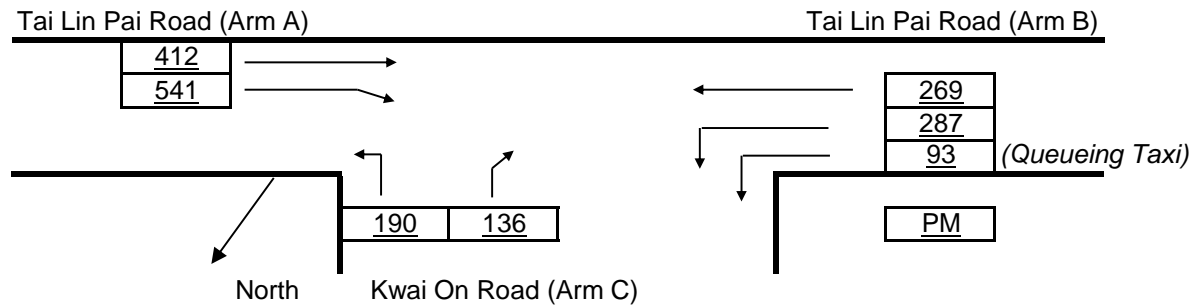

Analysis :

Traffic Flows, pcu/hr	AM	Capacity, pcu/hr	AM
q-CA	338	Q-BA	534
q-CB	178	Q-BC	745
q-AB	375	Q-CB	627
q-AC	530	Q-BAC	624
q-BA	358		
q-BC	374		
f	0.511		

Ratio-of-flow to Capacity	AM
B-A	0.671
B-C	0.502
C-B	0.284
